

Airpods battery life android

I'm not robot

Continue

We've seen more than a few studies that confirm that smartphone users care most about one thing: battery life. However, figuring out the best Android phones with the best battery life can be quite a test. After all, it's not just how much juice can be stored in the battery: software and related hardware play into it as well. We've seen some phones with high capacity batteries charge dismally for our testing, but some phones with relatively small batteries did exceptionally well. With the list below, we're going to collect the best Android phones with the best battery life according to Android authority internal testing. You will need to keep three things while scanning through this list: Unfortunately, many of the best phones with the best battery life are not available in the United States. U.S. citizens can still buy these phones, but you won't be able to do so through your mobile operator, and some devices will come without warranty. Do a lot of research before buying! Almost every phone with excellent battery life is also physically large. If you want a small phone, you'll have to sacrifice battery life, unfortunately. The phones below are not only the ones with the best battery life, but the best common devices that also offer impressive battery longevity. After all, what is the point of great battery life if the phone itself is a bad camera, bad software, or just appeals to a niche audience? The best Android phones with the best battery life are listed below in no particular order! Best Android phones with the best battery life: Realme X2 ProOppo Reno AceSamsung Galaxy S20 UltraOnePlus 7T and 7T ProSamsung Galaxy Note 10 PlusAsus ROG Phone 2Honor 20 ProXiaomi Mi 9Editor Note: We will update this list of the best Android phones with the best battery life regularly as new devices launch.1. Realme X2 ProIt may not be too surprising to see Realme X2 Pro on this list because the phone was our Best Android Winner of 2019. The X2 Pro is one of the best all-around devices ever released as far as we're concerned, offering terrific specs, awesome features, and a very competitive price. In addition to that, it's also a phone with some of the best battery life we've seen. Even though there are other phones on this list with more battery power, Realme X2 Pro pushes its 4000mAh package to great limits, giving the user enough juice to easily power through a full day for free. Related: Realme X2 Pro Review: the best value smartphone around? Even if you somehow knock the battery down too much a day, it doesn't take long to top the X2 Pro up. Phone unreal 50W charging speed, which means you can go from 0% charge to full in less than an hour. The only downside to the Realme X2 Pro is that it is officially not available in the United States. If you want to import an import from abroad, remember that it will only work for GSM carriers such as T-Mobile and AT&T; Verizon and Sprint will be no-go, unfortunately. Realme X2 Pro specs: Display: 6.5-inch, Realme X2 Pro specs: Display: 6.5-inch, Full HD +SoC: Snapdragon 855 PlusRAM: 6/8/12GBStorage: 64/128/256GBCameras: 64, 13, 8, and 2MPFront camera: 16MPBattery: 4000mAhSoftware: Android 9 Pie2. Oppo Reno AceTa also shouldn't be too surprising to see Oppo Reno Ace in this list of the best Android phones with the best battery life. After all, the whole marketing plan for the phone was to focus on how long the battery lasts and how fast you can charge it back up! If you get a sense of déjà vu, though, we clear the air for you: Yes, oppo reno ace looks a lot like the Realme X2 Pro. Yes, both devices even have a similar spec page. This is because Realme is a sub-label of oppo (which itself is a downstream brand of BBK), so many resources are shared between the two companies. Related: Oppo Reno Ace review: Taking chargeAs such, Oppo Reno Ace will give very similar results when it comes to battery longevity, as Realme X2 Pro does. However, Reno Ace ups the ante somewhat when it comes to topping up the phone, offering absolutely bonkers 65W charging speeds. With such high speed, it is possible to fill the phone from 0% to 100% in about 30 minutes or so. Once again, though, the Oppo Reno Ace is not available in the United States and only works on GSM networks if you could even get it. If you live outside the U.S., though, it will give you all the power you need! Oppo Reno Ace specs: Display: 6.5-inch, Full HD+SoC: Snapdragon 855 PlusRAM: 8/12GBStorage: 128/256GBCameras: 48, 13, 8, and 2MPFront camera: 16MPBattery: 4000mAhSoftware: Android 9 Pie3. Samsung Galaxy S20 UltraNow that the Samsung Galaxy S20 Ultra is officially out, there probably won't be too many of our Best of lists where it won't appear. The superphone is a specs beast that is quite literally the best of the best pretty much in every way. With that in mind, this is pretty much considering that it will be one of the best Android phones with the best battery life. Its massive 5000mAh power pretty much ensures you'll get through at least one day before you need to charge, and Samsung's Android skin – known as the One UI – does a pretty good job of increasing performance, but not sacrificing too much power. Related: Samsung Galaxy S20 Ultra review: Another name for overkillThere is one thing you need to keep in mind though when it comes to power-related features of the Galaxy S20 Ultra. Although Samsung sells the phone as a 45W charging speed, the charger that comes with the phone is capable of only 25W. If you want your device to charge as soon as possible, you'll need to buy the 45W charger separately. Fortunately, the Samsung Galaxy S20 Ultra is pretty easy to get around the world, also here in the US. You can get the phone from all major carriers and easily find it unlocked from many third-party retailers. Just make sure you're sitting down when you look at the price tag! Samsung Galaxy S20 Ultra specs:Display: 6.9-inch, QHD+SoC: SD 865 or Exynos 990RAM: 12/16GBStorage: 128/256/512GBCameras: 108, 48 and 12MP+ ToFFront camera: 40MPBattery: 5000mAhSoftware: Android 10.4. OnePlus 7T and 7T ProWants 2019 smartphones from OnePlus - OnePlus 7T and OnePlus 7T Pro were some of our favorite devices from last year. Two phones offer terrific specs and stunning design price at a point that pretty much anyone can appreciate. To further sweeten the deal, the 7T and 7T Pro are some of the best Android phones with the best battery life. OnePlus Android Skin Oxygen OS has many options and features to really make batteries on phones last as long as you need. Related: OnePlus 7T Review: Pro you always wantedKe up mind, however, that you can't get two devices everywhere. The OnePlus 7T is easy to get pretty much in every market for OnePlus services – including the United States – but the OnePlus 7T Pro is only available at select locations. If you can get the OnePlus 7T Pro, we highly recommend it over vanilla 7T – that all-screen display and pop-up selfie camera are totally worth the extra cost. In some select areas, there is also a 5G variant of the 7T Pro known as the OnePlus 7T Pro McLaren Edition 5G. Due to the 5G connection, this phone will not see the same battery life as a non-5G colleague, so we recommend skipping that one if you want the most juice you can get. OnePlus 7T specs:Display: 6.6-inch, Full HD + SoC: Snapdragon 855 PlusRAM: 8GBStorage: 128/256GBCameras: 48, 16, and 12MPFront camera: 16MPBattery: 3800mAhSoftware: Android 10OnePlus 7T Pro specs: Display: 6.7-inch, QHD + SoC: Snapdragon 855 PlusRAM: 8/12GBStorage: 256GBCameras: 48, 16, and 8MPFront camera: 16MPBattery: 4,085mAhSoftware: Android 10.5. Samsung Galaxy Note 10 PlusSamsung's other main series, the Galaxy Note line, is incredibly reliable when it comes to great design and terrific feature catch. It should not be surprising then that the Samsung Galaxy Note 10 Plus is one of the best Android phones with the best battery life. Although the Note 10 Plus is not the largest battery for phones on this list, the above One UI android skin does a great job of making this battery last. In addition, the 10 Plus note can charge up to 45W (with another charger than came in the box), making it easy to give it more juice if you start running low. Related: Samsung Galaxy Note 10 Plus review: No note you knowFor the first time, there were actually several versions of the Galaxy Note last year. As such, you over the face of a smaller Note 10 Plus shoot , simply known as the Samsung Galaxy Note 10, or the 5G version of this device. The first will be a smaller battery and it will use more power to connect to 5G networks, so they are not recommended to choose if you're just worried about battery life. As previously listed as samsung galaxy s20 ultra, Galaxy Note 10 Plus is very easy to get around the world. It will work for all major carriers and is easy to buy unlocked from many different retailers. Samsung Galaxy Note 10 Plus specs: Display: 6.8-inch, QHD + SoC: Snapdragon 855RAM: 12GBStorage: 256/512GBCameras: 16, 12, 12 + ToFFront camera: 10MPBattery: 4,300mAhSoftware: Android 10.6. Asus ROG Phone 2 If you are taking a quick gander at the specs page below on Asus ROG Phone 2, you will instantly notice how it earned its place in this list of the best Android phones with the best battery life. I think the phone has a gargantuan 6000mAh battery! How might it not be on this list? When you combine that much battery with Android 10 and Qualcomm Snapdragon 855 Plus chipset, you have a recipe device that will last you much longer than just one day. Depending on how you use it, you could easily get several days from this phone, never go off the charger. Related: Asus ROG Phone 2 Review: Someone finally nailed the gaming phoneHowever, ROG Phone 2 is (of course) designed for gaming, which is an operation that drains the battery pretty quickly. If that's what you plan to use for this phone, you probably won't make it through all day for one charge, but don't worry: its 30W charging speed will get you topped up pretty quickly. Asus ROG Phone 2 is quite easy to get around the world, although it will only work on GSM networks here in the US and there is no carrier partnership. If you can afford to buy it unlocked though, it will work just fine for T-Mobile, AT&T; Verizon and their different subsidiaries. Asus ROG Phone 2 specs:Display: 6.6-inch, Asus ROG Phone 2 specs: Display: 6.6-inch, Full HD+SoC: Snapdragon 855 PlusRAM: 8/12GBStorage: 128/256/512GB, or 1TBCameras: 48 and 13MPFront camera: 24MPBattery: 6000mAhSoftware: Android 10.7. Honor 20 ProAlthough Honor is a Huawei sub-mark – meaning it is also subject to Huawei ban restrictions – the Honor 20 Pro came out before the ban began. This means it comes with Google apps on board and even has a recent update to Android 10.The Honor 20 Pro is also one of the best Android phones with the best battery life of 2019. This was amazingly good in our testing, which is especially remarkable because it is one of the cheaper phones on this list. Related: Honor 20 Pro Review: Everyday luxuryIt's also the only phone here not powered by a Qualcomm chipset that lends some confidence to the idea that Kirin mikroschémas var būt tikpat labi kā augstas Klases Snapdragons at at in some ways. Unfortunately, you won't see the charging speed on this device that you saw in this list. Just over 22W, the Honor 20 Pro won't charge slowly, but won't charge quickly either. This, however, is a terrific camera system, a nice perk of what you pay for this thing! Honor 20 Pro specs:Display: 6.3-inch, Full HD+SoC: Kirin 980RAM: 8GBStorage: 128/256GBCameras: 48, 16, 8, and 2MPFront camera: 32MPBattery: 4000mAhSoftware: Android 10.8. Xiaomi Mi 9Once again, Xiaomi Mi 9 is not the largest battery - only 3300mAh - but our testing showed that it is an absolute monster when it comes to making this amount of juice for as long as possible. At least some of this efficiency probably stems from the contained Qualcomm Snapdragon 855 processor, which is a power-saving 7nm construction. Xiaomi Mi 9 has a 6.4-inch display with a water droplet at the top with a 20MP selfie camera. From the front, it would be difficult to distinguish the Mi 9 from other popular water droplets for smartphones such as the OnePlus 7T or samsung Galaxy M series phones. Related: Xiaomi Mi 9 review: The latest flagship tech at a reasonable pricely pricediu, the back of the device is a completely different beast. You can choose a colored, glossy gradient that looks like a shining gem, or a false back that looks like you can see the innards of a smartphone. Either way, your phone will be quite a fashion statement. Xiaomi Mi 9 is one of the best Android phones with the best battery life, but it is not officially available in the US. If you try to import it, just remember, it will only work on GSM networks, which means there is no Sprint and no Verizon.Xiaomi Mi 9 specs: Display: 6.4 inches, Full HD + SoC: Snapdragon 855RAM: 6/8GBStorage: 64/128GBCameras: 48, 16, and 12MPFront camera: 20MPBattery: 3,300mAhSoftware: Android 10It's our look at our cèces on the best Android phones with the best battery in life at the moment. Stay tuned for us to keep up to list as new devices begin! Launch!
