We've finally waited! Under the popular devices with Wi-Fi module AP6330 came firmware on Kit Kat (Tronsmart T428, Measy U4B, Iconbit G4). Important! Kit Kat for our devices is still in the development phase. There may be some shods. Some details of version 2.0: 1) Firmware is rut and installed by SuperSU. 2) Stock firmware had a section under the application 1 gigabyte. In this default 2 gigabytes (you can choose from options: 1, 2, 4, 6 gigabytes) 3) removed unnecessary Google apps (Can download back on Google Play). 4) Full support for init.d scripts. 5) The stock laper kit kat is replaced by a stock AOSP kitkat as more stable. (In addition, we get a transparent status bar). 7) The stock calendar does not work. Replaced by Google Calendar AOSP. 8) Edits in build.prop to install unsupported applications. 9) Added a reboot app (such as reboot to bootloader (flash mode)). 10) Working TWRP recovery! 11) You can choose the core (Kernel): This is the 720 and 1080 cores for 3188 with a frequency of 1.8mhz Also 720 and 1080 cores for 3188T with a frequency of 1.4mhz By default is set - 720 3188. 12) Choose download options. 13) Other small fixes.
