714 area code location usa

Sign up for the BuzzFeed QuizZes Newsletter - Binge on the latest quizzes delivered directly to your inbox with Quizze's newsletter! Zip codes and zip codes are numeric codes that are used to facilitate postal delivery, and area codes are used to specify a geographic area when you call a phone number. Instead of flipping through a large, cumbersome phone book, you can find and check zip codes and area codes on the web quite easily. If you have an address or a partial address, you can find the zip code via the USPS Zip Code Lookup, a tool on the U.S. Postal Service's website. You can also search by city or state, or find all cities that are part of a specific zip code. The International Post Codes site, maintained by Columbia University, has a comprehensive index of domestic and international zip codes, in addition to mailing acronyms, policies and best practices. You can also use different search engines to find zip codes. With Google, for example, to do a zip code search by address, type what you know about the address to see a map of the location with zip code included. You can even type something like the South Laurel MD zip code to see them all for this area (and to find links that show a complete list of zip codes for that region). You can also enter a zip code to see the geographic location it belongs to, as well as a map and other related Web results, such as a web location. If you don't add zip code to the end of the search, Google may display unrelated information. For example, a search for 90210 reveals the number of people who have been in a coma. You can also find a zip code with DuckDuckGo. Enter a zip code and DuckDuckGo returns a map, the location of zip code, weather, real estate and other relevant web results. A postcode listing on Bing brings back what city/location it relates to, maps and local attractions, such as grocery stores, hotels and movie theaters. If you type a partial address, Bing fills it in for you and reveals the zip code. Much like with a zip code, you can use a search engine to find an area code by searching for the city. To do the opposite and find out which part of the country an area code is related to, simply enter the area code in the search engine. To find an area code with Google, type the name of the city and state you're looking for, followed by the word area code. You will usually find what you need. For international listings, search for a phrase as a Kenya dial-up code, and you'll receive an informative response with the numbers you need to make a call to that nation. Enter the city and state in a new Bing search, and you'll most likely see Google-like results that show you the area code at the top of the results. The same applies to dial codes. Another way to find an area code online is with Tungsten Tungsten as bills themselves as Computational Intelligence. This data-based search engine does not display results like the others mentioned on this page, but with a little digging, you can find some unique information about cities and states that you might not find on another search engine. Using Yahoo to find an area code is very much like using Google; Simply enter the city and state name followed by area code and you get an instant result. Finding international codes is not as easy with Yahoo as it is with Google, but of course you can still use Yahoo to find other sites that can give you this information. Quite a few sites specialize in finding area codes that a simple search engine query might not reveal. You can use these free resources to find almost any area code and/or country calling code in the world: Area codes: Features area codes from mostly the United States, although other countries are spread through here too. BT Phone Book: Use this site to find area codes in the UK Country Codes: This site asks you which country you're calling from and to to assign the correct country code, area code, or both. LincMad: A zip code map that offers a visual representation of area codes in the United States and Canada.AllAreaCodes.com: Similar to LincMad, you get a full area code map of the United States and Canada, but also links to region-specific area code lists, details of area codes (e.g. wireless or landline, carrier, when it was introduced), search tools, and printable area code lists. Thanks for letting us know! Tell us why! George Diebold/Getty Images 578 area code is one of the unassigned codes for the North American Numbering Plan, which includes the United States, Canada, certain Caribbean nations and U.S. territories. Using a phone number with a 578 area code is an attempt to hide the source of a call. Area codes in NANP were first used in the early 1950s, with 86 of a possible 152 area codes in use. As the number of phone numbers increased over the decades, additional area numbers were oversized to supplement the needs of higher density areas on the continent. For example, area codes 917 overlap area codes 212 and 718 in the New York City area to accommodate the significant increase in the number of phone users there. Area code 543 is not currently in use in North America. The nearest existing area codes for this numeric are 541 for Eugene, Oregon, and 551 for Newark, New Jersey. Area codes are managed and handled by the North American Numbering Plan Association or NANPA. What people usually call area codes are officially known as NPA codes. All sets of three digits (000-999) are in theory an area code, but at present only 316 of these codes are in use. In addition, some codes are stored as special markers sort of. For example, the 800 area code is used for free calls where the recipient call instead of the caller. Ugurhan Betin/Getty Images The area code 668 is not a valid area code in the United States. But it is a valid area code in Oujda, which lies northeast of Morocco. Calls received from area code 668 can be traced back to telemarketers, beetle collectors and surveyors. The 668 area code is used to hide the valid phone number, making it impossible to locate the call or track the company making the call. Phone calls and text messages received from this area code can be reported and added to the fake number list. Scam artists are also known to use invalid phone numbers. Area codes 520 and 928 in general (but not exclusively) are designated for all the cities that are not in the Phoenix, Arizona metropolitan area. The largest Arizona city within area code 520 is Tucson. The largest Arizona city within area code 928 is Flagstaff. See a map of Arizona Area Numbers. Note: These area codes relate only to landlines. Cell phone area numbers are not limited by

geography. A person living in a home in a city can get wireless service with a different area code.
