It is a pleasure for us to present this book Statistics-1 (Basic Statistics) for students of the first semester of the B.Com program. The book is prepared in accordance with the new curriculum, effective from June 2016, introduced by the University of Gujarat. Each topic has a detailed theory for careful knowledge of the subject, illustrative examples for conceptual understanding and exhaustive implementation with additional goals. The components of the Book Stats-1 consists of four units that are: Linear Correlation Association attributes linear regression Business Prediction Goals We tried to discuss these topics in plain language. A review of the exercises at the end of each chapter and questions with multiple answers along with the answers. We hope this will help students prepare for their exams. Offers and feedback from the teaching fraternity and students sincerely requested and will be appreciated for further improvement in the quality of this book. Share this article with B.com first year students who are looking for B.Com Year 1 Books and help them download B.com Notes in PDF format. Considered by Mamata Marme, Associate Professor, Augustana College at 6/25/19 This tutorial offers a fairly comprehensive summary of what should be discussed in the introductory course in statistics. Statistical literacy activities are particularly interesting. It would be useful to have statistical tables ... More Review by Alexander Verkhovtsev, Professor, Anoka-Ramsey Community College at 6/3/19 This is a fairly comprehensive text, given that it is not easy to create a comprehensive statistics textbook. It is suitable for an introductory statistics course for non-mathematical specialties. It contains twenty-one chapters covering a wide range of ... More Review by Dabrin Dutcher, Associate Professor, Bucknell University at 3/4/19 This is a fairly thorough first semester stats book for most classes. This would work well for general statistical courses that I have taught in the past, but not so suitable for specialized introductory statistics courses More Review by Igin Sager, Associate Professor at the University of Missouri - St. Louis on 1/14/19 As the title suggests, this is a brief tutorial introduction. It covers fundamental introductory statistics, but not a comprehensive text on the subject. The teacher can use this book as the only text of the introductory statistics .... More Review by Suhwon Lee, Associate Professor of Teaching, University of Missouri at 6/19/18 This book is pretty comprehensive for being a brief introductory book. This book covers all the necessary areas of content for introduction to the statistical course for non-mathematical specialties. The textbook provides an effective index, a lot of exercises.... More Review by Jenna Kowalski, Math Instructor, Anoka-Ramsey Community College on 3/27/18 Text includes introductory stats topics covered in the college-level semester course. It includes an effective index and glossary with functional hyperlinks. More Review by Randy Vander Wahl, Professor at Pennsylvania State University on 2/1/18 In the text for the introductory course, the standard topics are covered. It was nice to see some topics such as power, sampling, research design and the proliferation of free techniques covered, as they are often omitted in abbreviated texts. Each module... More Review of zaki Kuruppali, Associate Professor, University of Ohio at 2/1/18 This is a comprehensive book on statistical methods, its settings and most importantly interpretation of the results. With the advent of computers and software, complex statistical analysis can be done very easily. But the problem is that... More Review by David Javon, Associate Professor, DePaul University at 8/15/17 This text covers all standard topics in a semester long introductory course in statistics. It is particularly well indexed and very easy to navigate. There is a comprehensive hyperlink glossary. Learn more boom sem 1 statistics book
