Enjoy the latest in browsing with Firefox, an app with lots of useful tools in a well-stated format. It looks great and is one of the fastest, safest ways to access your favorite sites. Firefox iPhone provides a fast, secure viewing packaged with a unique combination of features. Lack of add-ons and a few visualization problems can cause some difficulties. Firefox is a simple web browser for your phone with a well-designed feature set. This is fast because it doesn't waste time downloading tracking cookies. In tests, it was much faster than Safari, Opera and Google Chrome. The patented Tracking Protection option works both in private viewing mode and in normal mode. There is an option for the lock level you need - either Strict or Basic. Firefox has all the important features and settings, such as storing the default homepage and the preferred email app. It will also display saved bookmarks, search and browser history. It retains detailed information on the most visited sites and integrates with Pocket, an extension that offers websites, manages all of these items, and displays the list with one click. Firefox's Night Mode is an improvement on the iPhone's Night Shift. It darkens the display rather than adjusting the colors on the screen and makes it much more convenient for night time viewing. Another great feature is the built-in QR scanner. To activate the scanner, click on the address rack to view the QR button on the right. Firefox will ask permission before opening the camera to scan the code. One of the drawbacks is the lack of add-ons and extensions. iOS extensions written for Safari may not work with Firefox for iPhone, causing visualization problems when scrolling for some sites. Where can you run this program? Firefox runs on iOS 7.0 and the latest Android operating systems. This covers all major tablets and smartphones. Is there a better alternative? No. Firefox is, of course, a top-notch browser. There are only a few faster browsers around like UC Browser, but nothing beats this app when it comes to security. Firefox has a lot of practical features. Although it has compatibility issues with some of the website's add-ons, its night mode and built-in QR scanner make it a terrific choice. Should you download it? Yes. If you want a fast, secure, feature-rich browser, then that's exactly what you're looking for. Lightweight, promotional compass app A handy companion app Fast, sleek, and precise Small and fresh pieces of content In the now stunning images Keep a close eye on the stories that interest you. You can stay on top news events without leaving wherever you are, using the app on your mobile phone. This app is all about the latest developments you want to read. The New York Times is a news platform with some bells and whistles. You must register and register Account. Once you've done that, you can use the trial to navigate the news site. There's a huge variety of information to read on, but there are extra sprinkles in. This hands-free option is great especially for when you're driving or heading for a jog. Content in the app is automatically updated if you have an active Internet connection. If you open the program and the news is not updated, you can manually remove the main screen to force it. You can include a few special notifications. They will keep you updated on the stories you follow. Warnings can become excessive if you follow several different accounts at the same time. Otherwise, they are fantastic if you want to stay on top of specific news pieces. You can save the article to read later if you want. All you have to do is press the save button for later and you can read the story another time. This app lacks the night mode option available in a lot of alternatives. iOS, however, has the ability to scroll through the configuration menu and click on the night shift to switch under the brightness of the display. Where can you run this program? This app is available on iOS 11.0 and beyond. Is there a better alternative? No. This app has a simple interface and a complete list of features. The Economist boasts a similar set of features, but is unable to save specific articles. Podcasts are an alternative way to update yourself on unfolding news pieces. The New York Times app is an excellent approach to empowering its readers to be informed. Should you download it? Yes. If you are looking for an app to keep up with the latest stories, this is your choice. Chrome: Google's web version of the Play Store is convenient, but it's still missing a few features after all these years. The Google Play Store toolkit helps you fix a lot of minor issues to make it easier to use apps. Toolbox, created by the site Android Police, offers a lot of convenient settings. Specifically, in addition to the Set button, you'll also see a button for the APK Mirror. This site (which also belongs to Android Police) hosts APKs for apps that can't be downloaded yet. This is especially handy if you're sideloading an app that hasn't rolled out for everyone yet. You'll also see buttons for AppBrain (an alternative way to explore the Play Store) and Android police coverage for this app, if any. The extension will also show you if there is a beta version of the app available. Many companies run For their apps to check out the new features before they roll out for everyone, but you have to find them on your own. This extension will now show you a handy link where you can subscribe to the beta version and download the most bleeding edge version of the version Of all, you can disable any Toolbox feature individually. So if you don't know or care about what AppBrain is, you can disable that button in the extension options. At the moment the extension is quite bare bones, but a few features that it has is very convenient. The Google Play Store's Chrome Web Store toolkit via Android Police G/O Media may get commission Mario Kart Live: Microsoft's Home Circuit announced its plans to bring Cortana's virtual assistant to Android a few months ago, and the beta version of the app was slated for launch sometime this month. An early copy of the app is leaked to the internet today and you can download it through the Google Drive link below. Just keep in mind that since this file does not come directly from Microsoft or anyone associated with the company, you need to download and install at your own risk. If you're even familiar with Cortana on Windows 10 or Windows Phone, you'll be right at home here. Once you run the app for the first time and enter a few pieces of information, you can start using Cortana just like you would Google Now or Siri. Microsoft's voice assistant can help you plan events, update you on local news, weather, sports, and more. This version of the app seems to be fairly stable, but it's still a beta, so there will be many more improvements coming over the next few weeks. As for the app itself, Cortana's home home screen is your feed, similar to what you'll see on Google Now. On the left side there is a slide menu with a notepad and reminders, as well as a settings menu. We'll go more in-depth with voice assistant later today, but for now, feel free to download THE APK and try it out for yourself! Download APK here (Google Drive) Tagged: Microsoft Virtual Assistant Update, October 14, 2019 (10:09 am ET): After first showing up on the South Korean version of the Google Play Store (via Android Police), the Nvidia GeForce app is now available from APK Mirror for all to download (via XDA developers). While anyone can install the app on almost any Android device, you'll need a GeForce Now beta account to actually use the service. According to XDA, however, if you have that access to the service works very well. We don't know which devices will be supported or when they will see the release of GeForce Now, but it's a good sign that this APK works on most Android phones and tablets. Original article, August 19, 2019 (12:31 PM ET): The cloud battle has warmed up again, with Nvidia announcing that GeForce Now will begin rolling out support for some Android devices later this year. Cloud gaming service was in beta for PC, Mac and Nvidia Shield TV in a few years, but now you can take the entire library of PC games with you on the go. Yes, you're reading it right. Unlike Google Stadia, Stadia, Now you can connect to a remote PC and install games you've already purchased on Steam, Uplay, Battle.net and other digital platforms. This makes it an attractive alternative for those who have extensive libraries and insufficient equipment. To make the service even more attractive, Nvidia announced that GeForce RTX servers are rolling out today in Germany, and very soon in Northern California. Additional servers will open in Japan and Korea later this year. This will bring incredible performance and advanced ray tracking technology to the cloud gaming service. Combined with low 5G network delays, Nvidia claims that this makes VR and AR possible on almost any device. Related: Google Stadia vs. GeForce Now: Which cloud gaming service is better? It is unclear which Android devices will be included in the beta version of GeForce Now. Only the flagship devices from Samsung and LG are mentioned in the release, but even then it is more than the original deployment of Google Stadia, which will be available only on Pixel devices. Many games won't support touchscreen controls, so you'll need a Bluetooth controller to play games on your Android device. GeForce Now already supports some of the most popular options, such as The SteelSeries Stratus Duo and Razer Raiju Mobile, as well as the controller for Nvidia Shield TV. The beta version of GeForce Now will end in a few months, so be sure to sign up now if you want to try the service before it is released to the public.
