## Murray explorer go kart manual

Деньк функції Word не відображається в Google Документах. I bought a rolling Murray explorer gokart back a few years ago. I got apart rebuilt or replaced the parts. I used a predator machine on it. Pulling the single tyre didn't work well in the yard. So I used a track conductor and bearings and put a 1 shaft on it. It works well, but it eats clutches. I've checked the alignment every time. I replaced bearings with regular gokart bearings and bars and it still goes through clutches. I've tried low and high end clutch. The predator is a 6.5 hp, 3/4 axis. Used 35# gears and chains. It breaks the aborts in the clutch. When lining I used a straight edge on the outside of the sprockets then with the chain used in the chain. Looks square. I had to move the engine bracket when I changed the bearings. I checked the level and it shows the level. I also used an adjustable plate for the engine to give it more regulation than original mount. So I'm asking if anyone can give me an idea of where I'm wrong. The grandchildren want to play on it, but it will only go for 3 or 4 hours before the clutch goes. Sorta at the point of using the engine on a mini bike and ebaying the gokart frame. Any suggestions are welcome. Thanks! Oct 23, 2017 I'm pretty sure he got a Comet 30 series clutch and driver. Zone drive system. A standard mini bike chain clutch is not good for large, wide tires, and heavy weights. I assume you removed all this when you rebuilt it? A quick way to verify what I'm saying is to info@matorque.com email and let Jim know what your engine is, the kart weight estimate, the outer diameter of your tyre and the width. He's very responsive. Oct 23, 2017 It didn't have the engine or the drive. It had a wheel with a gear, the on-line manual showed with clutch and chain. The manual was close, but it didn't exactly match the gokart. But what you said makes sense. I use a comet in a healing super bronchial, I know they work with heavy loads. I had thought about a 40 chain and clutch, but I thought it would do the same. Anyway I'll go back double checking the manual again. Thanks for the thought. Oct 23, 2017 Big difference between the big bike and the heavy go kart. The general rule is Go Karts with rear tyres taller than 15 or an engine larger than 8hp require torque converter. Oct 24, 2017 Found the manual for the Murray explorer, think of this an early model. Sorta adult model has a difficult time putting in it, two position. He had a clutch and a chain. Orinally had welded bolts on the rear axles, by pulling a side. It didn't work well in the yard. Live in the Ozarks there is no level position or very little. Went to the solid rear axle helped, but still went through clutches. The engine is cc predator 6.5 hp and the tires are 14 on the back. Stayed with the same tyre size, even though I went on the straight axle. A torque converter or comet set up would be difficult to create with the room allowing. But I'll think about it before I give it all up. Sorta wonder if a cricket shaft could work, to have them on the doodlebugs d30 for grandchildren. Thanks for the info. Oct 24, 2017 If your previous model didn't have a solid shaft, then maybe that's the difference-spinning half the weight. I don't think a jack shaft is going to do you any good unless you're trying to reduce the gear ratio, and they don't have any other means. Of course that means getting too slow for grandchildren maybe. The weak link in these nails is the bronze ring definitely. I wonder if a TAV system would work. I guess the Predator crowd uses the Chinese knockoff versions, cut down, with some success. You may still have to move the rear motion sprocket down the shaft a bit to install it though. Here's the one-inch PTO version OldMiniBikes sells. October 24, 2017 I will do some looking and see I have a plate of a comet set up will be used with the super bronc. Give me something to do over the next few days to take care of. Oct 24, 2017 Hey I've been emailing couple times to Jim in maxtorque. You found out like you thought the clutch wasn't the way. He said he (murray) had two models one with a torque converter and one with a jackshaft. That must have been a previous model or something. I've got a clutch under the chain. Missed or did not look close to the list of sections in the manual. Anyway, either torque converter or go back to one drive with jackshaft. I can do some measurement and looking a little, have an idea I'll pull the motor, (they have mini bike frame that needs a new engine) and ebay the kart frame or sell parts. Thanks for the info and direction. He'll have to ask more questions early on. Like your Mopar had a 70's roadrunner in high school. Similar color. Oct 24, 2017 Hey I've been emailing couple times to Jim in maxtorque. You found out like you thought the clutch wasn't the way. He said he (murray) had two models one with a torque converter and one with a jackshaft. That must have been a previous model or something. I've got a clutch under the chain. Missed or did not look close to the list of sections in the manual. Anyway, either torque converter or go back to one drive with jackshaft. I can do some measurement and looking a little, have an idea I'll pull the motor, (have mini bike frame set a new engine) and ebay the kart frame or sell parts. Thanks for the info and direction. He'll have to ask more questions early on. Like your Mopar had a 70's roadrunner in high school. Similar color. Thanks for the results. Good luck any way you decide to go. Nov 13, 2017 Thanks! It gives me a couple of ideas. I'm not sure if I'm in what I'll go with the gokart. It could have use for the engine in another project. He can rack it up for later. But I know I have to go to a torque converter set up. Kind of tight for one, but it's possible. Thanks again. Nov 20, 2018 Plan to work on Murray gokart this winter. I know I need a torque converter. Question you can put the drive gear on the outside of the torque converter on the back and renegade the belt drive accordingly. I've been lining up the small outdoor theme because of brakes. I may have to, but I'm trying to find a way not to do that. I appreciate any help.
