If you're working on Windows and want to connect your device for testing, then you need to install an appropriate USB driver. This page provides links to websites for several original hardware manufacturers (OEM manufacturers) where you can download the appropriate USB driver for your device. If you're working on Mac OS X or Linux, you don't need a USB driver. Instead, read with hardware. To connect and debug with any of Google Nexus devices using Windows, you need to install a Google USB driver. Install the USB driver first, find the right driver for your device from the OEM driver table below. After downloading the USB driver follow the instructions below to install or update the driver, based on your version of Windows and whether you are installing for the first time or upgrading an existing driver. Then see the use of hardware devices for other important information about the use of the Android device for development. Warning: You can make changes to the android_winusb.inf file found inside the usb_driver (for example, to add support for other devices), but this will lead to security alerts when installing or updating the driver. Making any other changes to the driver files can disrupt the installation process. Windows 10 To install an Android USB driver on Windows 10 for the first time, do the following: Connect your Android device to your computer's USB port. From Windows Explorer, open computer control. In the left computer control glass, select a device manager. In the right glass of the device manager, find and expand portable devices or other devices, depending on which one you see. Click the right button on the name of the connected device, and then select The Update Driver software. In the hardware update master, select View my computer for driver software and click Next. Click View and then find the USB driver folder. For example, Google USB Driver is located in the android_sdk additional google usb_driver. Click on to install the driver. Windows 8.1 To install an Android USB driver on Windows 8.1, do the following for the first time: connect your Android device to your computer's USB port. Search for access, as follows: Touch screen: On your computer, swipe from the right edge of the screen and click Search. With your mouse: hire the bottom right corner of the screen, move the mouse index up, and then click Search. In the search box, click Device Manager. Double-click the device category and then double-click the device you want. Click on the Driver tab, click Driver Update and follow the instructions. Here's what you want to do for the first time to install an Android USB driver on Windows 7: Android device to your computer's USB port. Click the right button on your desktop or Windows Explorer and select Control. Select devices in the left glass. Find and expand other devices in Panel. Click the right button on the name of the device (such as the Nexus S) and select the software driver update. This will launch Masters Equipment Update. Select View my computer for driver software and click Next. Click View and find the USB driver folder. (Google's USB drive driver is android_sdk additional google usb_driver.) Click on to install the driver. Or upgrade your existing Android USB driver to Windows 7 and above with a new driver: Connect your Android device to your computer's USB port. Click the right button on your desktop or Windows Explorer and select Control. Choose the device manager in the left window window window. Find and expand Android Phone in the right glass. Click the right button on the Android Composite ADB interface and select The Update Driver. This will launch Masters Equipment Update. Select Set from a list or specific location and click Next. Choose to find the best driver in these locations. uncontrolled search for removable media; and check include this location in the search. Click View and find the USB driver folder. (Google's USB drive driver is android_sdk additional google usb_driver.) Click on to update the driver. Get OEM Drivers If you don't see a link to the manufacturer of your device here, go to the manufacturer's support section and search for a USB download driver for your device. The package provides installation files for Google Android Bootloader Interface Driver version 8.0.0.0.0.If the driver is already installed on your system, the update (reboot) can fix various problems, add new features, or simply upgrade to the available version. Please note that it is not advisable to install a driver on operating systems other than the stated.1. Remove the .cab file to the folder of your choice2. Go to the device manager (on the right, tap my computer, select Control, and then find the device manager in the left panel), or tap the right button on the Start menu for Windows 10 and select the device manager3. Click the right button on the hardware you want to upgrade and select Update Driver Software4. Choose the location of the new driver manually and review the folder where you retrieved driver5. If you already have a driver installed and want to upgrade to a new version got in Let me choose from a list of device drivers on my computer6. Click To Have Drive7. Browse the folder where you extracted the driver and click Ok About Bootloader Driver: Many devices benefit from a downloader that runs up to any other piece of software that gives instructions to the core of the operating system so that it can load Way. Although Android is an open source platform, manufacturers are trying to prevent users from installing another operating system on the device because their version is specifically designed for it. However, if you are going to change your smartphone OS or or Custom ROUs, you must first be able to unlock the downloader that these devices have. If you get and apply this interface driver, you'll be able to reach the loader; However, keep in mind that this package only allows you to access it and does not necessarily open it to you. Once you install this software, make sure to perform a reboot of the system so that all the changes will take effect properly. To sum up: if you want to change your smartphone's Android OS, click the download button, get and apply the package, and start unlocking the downloader. Check back from our site as often as possible to stay up to speed with the latest releases. It is highly recommended to always use the latest versions of the driver available. Try setting a recovery point for the system before installing the device driver. This will help if you have installed the wrong or mismatched driver. Problems can occur when your hardware is too old or no longer supported.
