Partly cloudy skies, 43 WSW winds of 5 to 10 mph Over the next 7 days weather °C per hour for Springfield next 7 days, hourly weather forecast Springfield, IL Sunrise: 7:13am Sunset: 4:35pm For more than 20 years, the world network has conducted the largest and most comprehensive weather observations in the world, lightning detection and climate networks. Now we're leveraging our big data smart to deliver on IoT's promises by integrating our local weather data into smart home-connected devices. The sun period does not exceed 6 degrees below the horizon at sunrise or sunset. The horizon should be clearly defined and the brightest stars should be visible under favorable atmospheric conditions (i.e. no moonlight or other light), one should still be able to perform in ordinary outdoor activities. The sun is between 6 and 12 degrees below the horizon at sunrise or sunset. The horizon is well defined, and the outline of the object may be visible without artificial light. General outdoor activities can not be done at this time without special illumination. The sun is between 12 and 18 degrees below the horizon at sunrise or sunset. The sun does not contribute to the illumination of the sky before this time in the morning or after this time in the evening. At the beginning of the morning, astronomy dusk, and at the end of astronomy twilight in the evening, the illumination of the sky is very faint and may not be detected. The time of the civilian sunset minus the time of the civilian sunrise, the time of the real sunset, minus the time of the real sunrise. Changing the length of daylight between today and tomorrow is listed when available.
