Dokken songs youtube

Keep up with the latest daily bustle with buzzfeed daily newsletter! Summer officially ends next week. Bummer. But you still have all those holiday videos that will help you remember the good times, right? In the YouTube era, you can make home movies all over the world, not just your friends and family. Here are two products – Flip Camcorder and Casio's Exilim EX-277 digital camera look designed to make it easier to be a YouTuber.Pricing: 512MB version, about \$109; The 1GB version of the \$120Pure Digital compact, affordable, easy-to-use video camera comes with software on your computer or Mac that, among other things, allows you to upload videos to YouTube or Grouper. I reviewed the video camera back in June, so I just cut into the chase and say uploading to YouTube is pretty easy- video camera computer software removes a few steps. However, it's not as simple as Casio's suggested YouTube upload software. (More on this in a moment.) To upload a video, connect the inverted video camera via USB to your computer or Mac and run the Flip Video software on your computer (the software is pre-loaded into the video camera). Select Share video, then Share online and select YouTube. Computer software formats a YouTube video that places a formatted video file in a new folder called Upload to YouTube on the desktop, and starts YouTube on Microsoft Internet Explorer. From there, you sign in or create an account and enter a title, description, and tags for the video. Finally, use YouTube in Internet Explorer to locate the video file and click Upload.Your uploaded video is about to appear on YouTube. How long you wait depends on the duration of the recording, the busy YouTube servers, and so on. Flip PC software inserts a short, silent advertisement to flip the video camera at the end of the YouTube clip and you can't delete it. To avoid a promotional message, you'll need to upload the video manually without using Flip PC software. Pricing: The \$199 Exilim EX-277 is one of four Casio digital cameras recently released or announced that feature YouTube in capture mode means that cameras can capture videos perfectly formatted on YouTube. Cameras have free software that you install on your computer to upload videos stored on your camera directly to YouTube from your computer. Casio says she has agreed with YouTube to be the only YouTube-mode provider during the holiday shopping season of 2007. Other Exilim models with YouTube mode so far are the EX-S880 (\$300), EX-V8 (\$330) and EX-Z1080 (\$280). I took an EX-277 with me on a recent trip to Ogunquit, Maine. After returning home to YouTube, I uploaded two using casio software on your Windows Vista-based computer. You can see both clips of Traveler 2.0. One clip was shot in bright sunlight, the other through the full moon. YouTube video recording mode is a bit tricky to turn on. You have to button BS (it stands for Best Frame), then scroll through the preset menu of photo and video modes. You can find YouTube mode at the end of the options. Select it using the Camera Set button to activate the video mode, which captures the MPEG-4 H.264 image format of 640 to 480 pixels, up to 30 frames per second. YouTube boot software that you install on your computer from an included CD by uploading clips to a single dialog box. The software automatically finds all videos on the camera when it is connected to the computer via a connected USB cable. You can upload all clips or only the ones you choose. With Casio software, you can also enter a video title, description, and tags; Select a YouTube category, such as Travel & Places choose a language; refer to our video as public or private; and tell Casio software if you have a YouTube account or want to create one. When you're done, click Save, and the software will take care of everything else. Casio's camera and YouTube software make uploading the video to the site as simple as it gets. One complaint: Casio software allows you to enter only up to 25 characters (including spaces) for YouTube tags that help other YouTube devices find your video. However, you can enter many more characters on YouTube. Neither the Flip Camcorder nor the Casio digital camera gives you the highest quality video. But if you just want to get your videos on YouTube quickly, Casio Exilim gets my vote. It's more expensive than the most expensive flip camcorder, but because it's a 7.2 megapixel digital camera, Exilim is much more versatile than Flip.For example, you can capture as many video clips exilim as your Secure Digital Card collection will take place, but with a flip video camera, you only have 30 or 60 minutes of video depending on the model. You can delete videos inverted to have space, or delete them all by moving clips to your computer. But before you buy any device, remember a few things: First, it's not all that's hard to format and upload a video to YouTube, if it were, there would be no trillions of video clips on the site. Secondly, neither product software allows you much if anything in terms of editing or adding effects, titles or transitions. Video editing software is required to perform these tasks. Third, video editing programs can help you upload finished video productions to YouTube. For example, the latest version of Apple iMovie includes YouTube upload. Apple iPod Touch: Apple's new iPod Touch is basically an iPhone without a phone. The latest iPod iteration shares iPhone touchscreen, software and Wi-Fi capabilities. Apple will launch shipping Touch until the end of September. The 8GB model is \$299, while the 16GB model is \$399.Palm cancels Foleo: Palm Palm canceled Foleo, a companion of the laptop-sized Treo smartphone, which was due to be on board by the end of the summer. Palm CEO Ed Colligan, in the company's blog, wrote that Palm canceled Foleo in order to focus on developing one device platform instead of two (one for Foleo, the next generation of smartphones). Colligan left the door open to introduce the modified Foleo II one day. TomTom GPS with voice recognition: The new TomTom GO 920 T has voice recognition that lets you tell your device where you want to go so you can keep both hands on the steering wheel. The portable device comes with pre-installed maps in Europe and North America and is an FM transmitter. It is expected to be a ship in the fourth quarter.
