How to unlock computer without password windows vista

By Tammy Clevenger The Microsoft Vista operating system is easy to set up for a wireless network. With just a few clicks, a wireless connection can be created and several connectivity points can be stored on your computer at the same time. When you reset a wireless password, also known as a WEP key, access key, or passcode, this setting must also be updated in the Vista wireless connection entry for that network. Vista provides quick and easy access to wireless connections to get the job done. Click the Windows Start sphere, and then click the Network button in the right pane of the Start menu. Click the Network Center link on the top taskbar. Click the wireless network entry to edit. The Wireless Network Connection dialog box opens. Click the tab labeled Safety. Type a new password in the input box marked As Network Security Key. Type the key again if prompted. Click OK. The wireless connection is now updated in Vista with the new password. Blog: Facebook: Twitter: Website: Instructables: ... Link: Visit my blog and other sites for more cool tech stuff! There are only two Microsoft-approved ways to reset your Windows password that are discussed at the bottom of this page. However, there are many reasons why one or the other method is very often not an option. Fortunately, there is an unapproved but completely safe and very effective way to reset passwords for Windows 10, Windows 8, Windows 7 and Windows Vista. You can reset your computer password by temporarily replacing the executable with an easy-to-access executable file from outside Windows, allowing the now-replaced feature from the Windows logon screen to open a command prompt and then reset your account password with a network user command. Although this password reset process is quite involved and requires work from the command line, it is very within reach of the capabilities of anyone who reads it. Microsoft Said, the process varies significantly between versions of Windows, mainly due to the different ways different Microsoft operating systems give you access to the command line outside of Windows. Because of these differences, we've created very detailed password reset tutorials that you can follow, specific to which version of Windows you're using: To use this password reset method, you need to have access to some recovery or installation media for your version of Windows. installation media will work for Windows 10 through Vista. The system repair drive is good if you're using Windows 10, 8 or 7 or a recovery drive in Windows 8. Using installation media or recovery from another computer, your or a friend's is fine and won't break any license agreements Microsoft – Just make sure it exactly fits your version of Windows. It is possible to make this trick work for Windows XP, but it is not as simple as it is with newer versions of Windows due to the way the Recovery Console works. Instead of this trick, see our article I forgot my Windows XP password! Can I do something about it? and try one of the other suggestions. There are two preferred ways to reset your Windows password, and we recommend that you choose one instead of the procedure above, if the situation allows. If you're using Windows 10 or Windows 8 and sign in with an email address, follow the instructions to reset your Microsoft account password instead of the tips above. In this particular situation, and only in this situation, this is not the only preferred method to use; this is one of the few ways that you work. If you've previously created a password reset drive or flash drive and know where it's located, use it on the sign-in screen in any version of Windows. If you're using Windows 10 or 8 with a Microsoft account (you sign in with an email address), you can never create a password reset drive, so you shouldn't try it. For a complete list of password reset, recovery, and other options, see Ways to find lost Windows passwords. Thank you for letting us know! Tell us why! Yes, you can reset your Windows Vista password. Not only is this possible, but it is not even so difficult. The password reset disk, which you can read more about in step 12, is the only approved way to reset your Windows Vista password, but the trick we've described below is relatively easy to do and works almost every time. In addition to this trick, there are other ways to reset or recover a forgotten Windows Vista password. Insert the Windows Vista installation DVD into the optical drive, and then restart the computer. For help, see How to start your computer from a CD, DVD, or BD. If you can't find or have never had a Windows Vista installation disc, you can lend it to someone else. You're not going to reinstall Windows Vista or do anything that breaks your license agreement with Microsoft or a friend of yours. Wait for the Install Windows screen to appear, and then press Next. If Windows Vista starts normally or you don't see this screen, your computer probably started from your hard drive, not your Vista drive. Restart your computer to try again or see the boot tutorial we connected to in the first step above for more help. Select Repair computer at the bottom of the window above the microsoft copyright law. Wait for the Installation of Windows Vista to be on your computer. After you find the Windows Vista installation, look for the drive letter that you noted in the Location column. Most installations of Windows Vista will show C: but sometimes it will be D:. Whatever it may be, remember it or Down. In the Operating System list, probably only one entry, select windows vista, and then select Next. System recovery options will open. In the list of recovery tools, choose Command Prompt. At the command prompt, type the following two commands in this order by pressing Enter after each line to execute it: copy c:\windows\system32\utilman.exe c:\ copy c:\windows\system32\cmd.exe c:\windows\system32\utilman.exe Answer yes to the Replace question that will be asked after the second command is executed. If Windows Vista is installed on a drive other than drive C:, something you specify in step 4 above, change the four instances of c: in the two commands above with whatever drive letter you should be. Remove the Windows Vista drive and restart the computer. Wait for Windows to start on the Vista logon screen. On the Windows Vista sign-in screen, select the small circle-shaped icon in the lower-left corner. Now that the command line is open, use the network user command as shown below, but replace myuser with your username and newpassword with the password you want to set: myuser network user newpassword For example, we can do something like this: net user Jon d0nth@km3 Place double quotes around your username if it contains spaces. For example, net user Jon Fisher d0nth@km3. When the message appears, the command completed successfully close the command prompt and log in with the new password! If you can't get on, restart your computer and try again. Now that you're signed in again, create a Windows Vista password reset disk. Once you have it, you never have to worry about forgetting your password or breaking back in that way. Finally, we recommend reversing the changes you made to perform this trick. You don't need to, but if you don't, you'll no longer have access to vista accessibility features on the sign-in screen. To undo everything except the password that will work when you reset it in step 10, repeat steps 1 through 6 exactly as described above. At the command prompt, execute the following command, and then restart the computer: copy c:\utilman.exe c:\windows\system32\utilman.exe Reply yes when prompted to confirm utilman.exe. You can reset your Windows password using this utilman trick in other versions of Windows, but the process is a little different. See How to reset your Windows 8 password or how to reset your Windows 7 password for our windows password reset guides on these versions of Windows. Thank you for letting us know! Tell us why! Forgot your Windows Vista password? Don't feel bad because you don't Same. We should make our passwords hard to guess, but sometimes we make them so difficult that no one, not even us, remembers them. Photo Kyle Glenn on Unsplash There are several ways to find vista's forgotten password: If at some point in the past, you created a windows vista password reset disk, congratulations for being proactive! Now is the time to use it. The password reset disk will continue to work even if the Windows Vista password has changed since it was created. Before you jump over this seemingly obvious advice, really take a look at some of these ideas. If you haven't already, take serious guesswork before moving on to more complicated ways to recover your password. Most passwords, even too complicated, are often inspired by everyday things in our lives, so you may be able to recreate your password by guessing how you came up with it. Is it possible that the Vista login password was created using: first name?family member's name or friend?a pet's name?birthday?your home or office address?something from your childhood?favorite food?frequently dialed phone number?some combination of the above ideas? If you share your computer with someone else, they might have administrator-level access, which means they can change their Vista password. If you are the only computer user, this advice obviously won't do you much good. This is probably true for most people because most of us are the only users of our computer. Now we start in serious things. Not impossible, even for beginners, just much more engaged than guessing. If you tried the easier ideas above and nothing worked out, follow our how to reset windows vista password tutorial. Yes, there are a few commands to execute and you may need to do some things you've never done before, but it's very simple and almost always does the job. If you don't have a way, you'll remember your forgotten Vista password, you don't have a password reset disk, you're the only user on your computer, and the reset trick doesn't work, then it's time to go for dedicated recovery/reset software. Called Windows Password Recovery Programs, these are tools designed to reset/delete your password or recover your old password. These are not the easiest programs in the world to use, but if you can follow the step-by-step directions, it's almost certain that you will get out of this difficult situation. If you still can't get into Windows Vista, even after trying free password recovery programs, you'll need to do a clean installation of Windows. This is a type of recovery that will delete everything on your computer, including a password you forgot. This is a drastic and destructive step, but if you forgot your Vista password and can't get in any other way, a clean installation is guaranteed to make your computer come back fully functional. When you come up with a password or password, you should think about how to avoid it in the future. The last thing you want is to repeat these password reset methods again in a few months when you encounter the same thing In addition to creating a password reset disk, as described in the link above, the next best way to make sure you can always get to Windows is to burn your password somewhere. However, instead of saving it next to your computer or sacrificing a complex password to memory, consider saving it to password manager. Just make sure you're using one that has mobile access so you can find your password without having to access Windows. Another way to make sure you're never without access to your computer is to set up automatic sign-in in Vista. This will allow your computer to store your password so that all you have to do is turn on your computer to log in to your user account — without a password! It's definitely not a safe way to use your PC, but it's an option. Thank you for letting us know! Tell us why! Why!
