How to start Grasscutter farming in Nigeria Grasscutter, which is also known as the rat from the rodent family. They are widespread and valued in West and Central Africa and often prefer other sources of meat. The vast majority of these animals are still coming from the wild and several species have been hunted so widely that they are now extinct. It offers small farmers, investors, businessmen and all those with a rich mind set, an economic incentive to raise grasscutters in captivity. Recently, intensive production of Grasscutters has been carried out in many African countries, including Nigeria. Believe me when I tell you sheep farming business in Nigeria is highly profitable; I mean, what else can you say about an animal that reaches its thermal period every 16-18 days, has a gestation period of 148 days and has a lifespan of about 7 years? Not only that, aside from the first investment, raising sheep is relatively easy and cheap, with their feed being cheaply cheap. However, there are some things that need to be put in place to make sure you are able to properly set up the farm, manage it and then profit from it. So enjoy our guide on how to start a sheep farming business in Nigeria. Unlike other forms of rural In Nigeria, sheep breeding business does not require rigorous training as they are cheap and easy to train and maintain. The grass cutter belongs to the order of thryonomidae rodents and the family, which contains only the genus Thryonomys. Dorst Dorst Dandelion (1979) recognized only two species, which they describe as large grassy. They are heavily constructed, a thick set with animals with a rounded snout, small round ears, short tails and harsh bristly fur. They have a peculiar bristly tail that easily fractures near the base if captured, just like the easily sprayed tail of a lizard, a phenomenon that has tremendous protective value. The rough bristles coat does not have under the fur, although under the enlargement are visible some rarely scattered very thin straights under the fur. The small round ear is covered with strong and well-paved and armed with powerful straight claws. How to start a Grasscutter agricultural business in Nigeria. Sheep business in Nigeria: A guide to how to start - Nigerian Infopedia How to Start Farming Herbivores. One good thing about grasshopper farming is that you can start small, very small. You don't need to blow up your budget or sink a hole in your pocket to start this business. You can start with one male and four women in a cage. Then you can upscale when you get more experience and more money. Are you interested in starting a rabbit farming business, but you don't know how to do it? Do you need a sample rabbit farming template business plan? Rabbit farming business can be very profitable for an entrepreneur who has a talent or passion for livestock and live livestock. Starting a rabbit farming business doesn't need much money like any other business do, but rather it requires the entrepreneur to know about livestock and how best to educate animals. You can start it in your backyard with just two male rabbits and six women, a wire cage and information from the agriculture guide. Aside from knowledge, it is also important that you are passionate about animals. If not, then get someone who likes to spend time with animals. Over the past couple of years, the practice of grasscatter farming has been steadily increasing in West Africa. These rodents also known as Reed Rat or bush meat tend to live on meadows, clearings, muddy areas, reed beds, and riverbanks in sub-Saharan Africa, and can grow to a length of nearly 2 feet (0.61 m) and weigh just under 19 pounds (8.6 kg). With strong market demand for these rodents in countries in Latin America, Asia and Africa, market potential forces farmers with technical know-how to set up and run large grassy farms in their localities or in sites purchased in specific locations. Trionomia Swinderianus, also called Big Cannu Rat, are the most popular species of herbivores grown in West Africa, especially in Nigeria and Ghana. Growing these grass-like helps farmers build sustainable agribusiness in a very agricultural category. They are usually large and weigh an average of 8.6 kg per animal. Smaller strains strains in the forest area, while larger strains are usually found in savannah areas and lighter in color. See also: How to start a lucrative snail farming business (comprehensive business plan E-Book) Grasscutter Agriculture is nurturing herbivores for both domestic and commercial use. They live in small groups led by a male, make nests from grasses or burrows underground, nocturnal, and can live more than four years.
