This feature seems simple and maybe a little useless, but it's actually perfect for games where you need to click or click non-stop to win. First of all, you need to set up Automatic Clicker by switching the configuration. From there, you want to set up access permissions and часто вы хотите, чтобы он нажимал, сколько времени он должен нажимать и общее количество времени, которое вы хотите, чтобы он нажимал на экран для вас. Есть два варианта на выбор: первый - для настройки автоматических нажатий на одно определённое место на экране, а второй - для установки нажатий вразброс. Вам придётся настраивать каждый отдельно, но с заранее заданными режимами вам не придётся слишком много думать об этом. Automatic clicker - идеальный инструмент для игр бездействия. Всё, что вам нужно делать, это нажать на плавающий виджет, а оттуда просто откинуться в кресле и расслабиться и наслаждаться плодами ваших автоматических нажатий.
