Have you ever dreamed of becoming an NBA star like a little boy? Do you ever constantly talk to your friends about how much you admire one basketball player? Do you ever sit in front of the TV to watch exciting basketball games? If so, then Spalding 60 inch acrylic portable basketball hoop system will be your choice! Spalding is the only brand in the portable basketball hoop market that is able to print NBA marks on the backboard. Playing basketball with such a professional backboard look, you will feel like you are the star yourself. In this article, we'd like to give you a detailed introduction to the Spalding 60 inch acrylic portable basketball hoop system and all its specs: Spalding 60 inch acrylic portable basketball hoop system ReviewsSpalding NBA 60 inch portable basketball SystemThe regulation NBA backboard is 72 inches, while for portable basketball hoops, 60 is the largest inch size that you can find. The average portable basketball backboard is 45-54 inches, so spalding 60 inch acrylic portable basketball hoop system will provide you with more satisfying feelings in play and practice. As the name suggests, one feature on this SPALding NBA portable basketball system is its acrylic backboard. We know that polycarbonate, acrylic and hardened glass are the three common materials on the back holder, and both on rebound performance and price, acrylic is always on average. It is more durable than glass, but certainly has a weaker rebound effect. If you are going to get one quite the same effect as in your gym, then you need to open your wallet and you take more money to buy a hardened glass portable basketball system. Again, this 60-inch portable basketball hoop, wide backboard gives you a better chance of bank shots. And the clear rear end makes it look professional. Of course, what attracts the most NBA sign printed on it is the UV protected so don't worry about fading for a long time of use. It takes the arena to slam the breakaway rim. Nowadays, the higher rim play or dunk has been a vital part of basketball games, this rim uses heavy springs to stabilize the rim and make a connection between them. The slam rim comes with pros and cons, pluses, of course, meeting the demand dunking and protecting it in the game. But cons, however, he gets a rag over time for abuse and dunking regularly. When it goes rag, you have to get a new one that fits the hook. So we don't really suggest you use it for dunking practice. Build a 60-inch acrylic portable basketball hoop system Pretty simple, takes about 4-5 hours. But we offer two or three people to come for help, it is not an individual job. However, take it easy, the instructions are very nice, so once you read it carefully, the assembly is nothing to worry about. If you're still worried about wobbling or wiggle in the game, the game, This Spalding 60 inch acrylic portable basketball hoop system releases your concern with its 40 gallon base. Most portable basketball hoops of the other brand use 27 gallons or 35 gallons, of course they are not as stable as the 40 gallons one. There are filling holes installed at the base to fill with water or sand, if you live somewhere warm, then you can fill with water and no leak appears. But if you live in cold areas, sand may be the best choice. Two wheels are installed at the base to move, but it's really hard to move with 40 gallons of water. Just imagine a suitcase full of clothes and other items. But thanks to the wheels, you will be able to move it to the garage in severe weather conditions or for a long time of storage. Just a reminder, don't put it apart for storage, it will be very painful. It uses 3 pieces of 3.5 inches round steel pole, quite stable according to customer reviews, but difficult to pull the main pole together in the assembly. The 3 piece pole is definitely not as good as 2 pieces or even 1 piece, if you want to get a higher quality one, you can choose the Beast, it takes 2 piece poles. What's more, this portable basketball system is regulated, and the propeller lifting system adjusts it from 7.5 to 10 feet. Thus, it corresponds to the needs of people of all ages and all levels. Highlights: 60-inch acrylic backboardHeavy-debt steel frameArena slam breakaway rim3 piece 3.5 inches round steel pole 40 gallons baseHeavy-debt springWhen we like about it: the ball bounces it well, To ensure a stable, not hanging on the rimS is solid in all kinds of bad weathersEasy reduce or lift through crankGreat quality, not wobbleNice instructionsWhat needs to be improved: Requires two people to install and takes about 4-5 hoursDifficult move after filling with water or sandDifficult to pull the main pole togetherSpalding is the leading brand for the production of basketball Balls and basketball hoops are on the market, it has many times been regarded as the official brand for the production of NBA products, so the production of skills and quality level goes without saying. Spalding 60 inch acrylic portable basketball hoop system is one except for The Beast that lists the best-selling and best buy portable basketball hoop. And it's the most cost-effective at around \$500. So, if you want more information about product specifications or price data, please check directly on Amazon. There will be a constantly great discount to help save money for you. There are a lot of comments here on the build, so I'll start there. Instructions found instructions to be on par with almost everything else in the assembly Category... Swing sets, ping pong tables, modular furniture, etc. It's no better and no worse than these items. You won't get the Apple experience here, but the instructions are very useful. There are a few items that are out of the For example, after step 9 this note is to tighten the bolts you set in steps 4 through 8. But, I never saw anything in steps 4 through 8 that suggested I not tighten them. (My step links may be off, but the point is the same - maybe the front-load direction so as not to tighten the bolts later). Otherwise, it is carefully and relatively easy to follow. Physical assemblyThe systems have a pole of three parts. Instructions tell you to bounce the pieces together. It's a slam all over my body. After fighting the first pole, I used some lubricant on the second. I recommend lubricant. You need some kind of saw. This is stated in the instructions. I used two stairs with 2x4s in between. A standard saw-horse can't run as you need it to be quite high. Just know that this is happening - you have to have some way for the pole to be horizontal and off the ground. The hardware fit was cozy and safe. Sometimes the powder coating prevented the installation of bolts and required a light tapping with a rubber hammer. This is called in the instructions, however. I think it would be almost impossible to install a backboard without a second person. It took me and my father 3 hours to collect, including a good 30 minutes to diagnose the missed bolt. Oh... Easy in a hurry and skim directions. BackboardThe backboard has a protective film on it... like that on most TVs and consumer electronics. Unlike other products, there is no note that encourages the presence of the film. So when you first pull out the back holder, your heart sinks into my stomach a little bit... it will look like the board was pulled over the truck by a mile. The good news: most of these characters disappear when you remove the movie. The bad news is, there were potholes and footprints that penetrated the movie on my backboard. Not enough to cause real discontent, but a little more care at the plant would be good. I take half a star on this... I like to be the one to damage the products that I buy, and this goal is too expensive to have this type of factory damage present. StabilityI was a Pro Dunk platinum hoops in my previous home. I could do pull-ups on the rim. He had 1/2 glass and a 6 quad post, which anchored 42 into the ground. It was a beast. It has a 40 gallon tank that will weigh about 330 pounds when full. This creates a pretty solid base. The backboard is lighter than acrylic, but a good, positive response to bank shots. I was surprised by the stability of this hoop. No hanging on the rim, but it should accommodate some dunking. We'll see. The adjustable height mechanics of the rim seem solid, but we'll see how it's weathered. The handle is disconnected, which is a good feature for people who might worry about neighbors reducing and abusing PortabilityHey, the word Portable appears right in the name of this product. If I wanted a permanent one, I'd buy another Pro Dunk Hoops goal. I bought a bought one to be portable. That's where it fails. No, I'm an average guy and it was very difficult to move and positioning that goal. It was a bear to move. Even worse is the lack of runoff at the base. How can I get 40 gallons of water when I need to move it? Straw? Again, if you're advertising something like a portable, you really need to post this usage model. Definitely a half star deduction for this massive oversight. If it is portable, it should have drainage. Period.SummaryThis a great basketball hoop. It's not a 30-minute build job. Given the scale of the project, I thought the instructions and the assembly process were very acceptable. This is a two-person job and will take 2-4 hours. The minimal tools needed and fit and the finishing parts were pretty good. The exception was the backboard which had some scratches and mars in it, which I wouldn't expect from a product that's expensive. The early execution of the hoop is pretty good. The target is stable and correctly aligned when assembled. I chose a 60-acrylic over 54 glasses to accommodate portability. It was a good decision, as playing acrylics is excellent and the stability of the goal exceeds my expectations. However, the portability of the goal is limited. The sheer weight, even with acrylic, makes it difficult to move and the lack of runoff in the base leaves me scratching my head on how to get rid of 40 gallons of water. I'm going to have to learn how to do this because I don't buy a water pump. I am happy with the purchase and would recommend the product. I can't appreciate the durability at the moment. It's time.
