After a brazen move to add its own payment system to Fortnite, the hit game was removed from Google Play and the Apple App Store yesterday. While iPhone users are unlucky when it comes to gaming, Android users can still install Fortnite. Here's how to do it safely. Do you have a Samsung phone? Obviously, the perfect way to get Fortnite installed on your Android phone is through the official app store. Since Google Play is out of the window, there is only one other method of official distribution, the Samsung Galaxy Store. Fortnite for Android actually debuted on the platform through the Samsung store, and it's still available to install there. Any modern Samsung smartphone can go to the Galaxy Store and, with a Samsung account, download the Epic Games launcher. Once installed, this app can download Fortnite and lesser-known Battle Breakers to the Galaxy device. This method is available for Galaxy flagships such as the S20, Note 10, and other devices; but also for some more affordable options such as the Galaxy A51. I find that the Samsung Galaxy Store is not a good surfacing Epic Games launcher through search, but a direct link usually does the trick. Sideloadng can be dangerous, so close the gate behind you Another way to download Fortnite for Android through APK spreads Epic Games. APKs are files that every Android app is installed as, but installing an APK that does not apply to the official storefront means opening the device before the side download. The lateral loading of the APC is not dangerous in itself. In fact, it's a common way to get an early update or bring the app to devices that aren't officially supported. However, APK files can also be malicious and can be disguised as official applications. So as a result, you have to be very careful sideloadng epic games launcher on Android, so you can install Fortnite. Here's how to do it safely. First, go to the official Epic Games website to download the official APK. From your Android smartphone or tablet, head to fortnite.com/android. Here you download and install the Epic Games APK store. If this is the first time you've done this, you'll see a hint to install from an unknown source for Google Chrome or your device as a whole. How to install Fortnite on Android Download Epic Games Launcher First, go to the official Epic Games website to download the official APK. From your Android smartphone or tablet, head to fortnite.com/android. Here you download and install the Epic Games APK store. If this is the first time you've done this, you'll see a hint to install from an unknown source for Google Chrome or your device as a whole. Fortnite for Android from Epic Games Launcher After installing Epic Games Store, it's time to install Fortnite Fortnite on an Android device. You will see the same request this time, now asking permission to install unknown applications from the Epic Games Store. Again, you will need to grant this permission. Re-protect your device from OK DOWNLOAD APK, so fortnite is now installed on your Android device. It's time to play, isn't it? Incorrectly! Instead, you need to dive into the settings on your device and go close the gate if it was to protect your security. These settings may differ between devices, but the process on Android 10 is this. Find Apps and Notifications to Click Special Access to the App to Scroll Down to Install Unknown Apps under Chrome, turn off the permission to install unknown apps To continue receiving Fortnite updates on Android, you'll need to allow the Epic Games Store to continue to have access to installing APKs on your device. This, however, poses less security risk as the app only installs the other two. However, this is a process that you have to do at your own risk. After all, Google pointed out the security risks this process may still have. Read more about Fortnite for Android: FTC: We use income earning auto affiliate links.
