Wsdm 2020 key date

Keynote speaker Susan DumaisMicrosoft Research, Cambridge MA, USA Eran SegalWeizmann Institute of Science, Rehovot, Israel Yoav ShohamAI21 labs and Stanford CA, US WSDM (pronounced wisdom) is one of the most important conferences on web-inspired research involving search and data mining. 14. The ACM International WSDM Conference will be held online from 8 to 12 March 2021. WSDM is a highly selective conference that includes invited debates as well as referees. WSDM publishes online and social network original and high-quality papers related to search and data mining, with an emphasis on a practical but principled new search and data mining model, algorithm design and analysis, financial impacts, and in-depth experimental analysis of accuracy and performance. Timeline > Long Papers Notifications Tutorial NotificationsDoctoral Due Demos NotificationsDoctoral Notification Industry Day Notices Guides, Doctoral Consortium as ACM Conference WSDM and its organizers, speakers and participants are affiliated with ACM's anti-discrimination and harassment policy. As organizers of WSDM 2021, we are committed to providing an inclusive, safe and respectful meeting environment for all participants. If you experience or witness a violation of the anti-harassment policy or have other concerns about your ability to participate fully and safely in the conference, please contact wsdm21-gc@googlegroups.com. WSDM 2020: 13th ACM International Conference on Web Search and Data MiningHouston, TX, United States, February 6-9, 2020 Conference website: Deadlines: The deadline for abstract transmission is Monday, August 12, 2019. The final paper consignments are due on Friday 16 August 2019. WSDM (pronounced wisdom) is one of the main conferences of web-inspired research involving search and data mining. ACM's 13th-minute report on the 2007-2013 The International WSDM Conference will be held in Houston, Texas from 3 to 7 February 2020. WSDM is a highly selective conference that includes invited debates as well as referees. WSDM publishes online and social network original and high-quality papers related to search and data mining, with an emphasis on a practical but principled new search and data mining model, algorithm design and analysis, financial impacts, and in-depth experimental analysis of accuracy and performance. In particular, the original papers with an emphasis on new algorithmic approaches are encouraged. Application-driven documents that make innovative technical investments in research are welcome. Visionary papers on new and emerging topics are also welcome. List of topics Topics include Web Search Adversarial search Algorithms and Web-scale search Audio and touch interfaces that can search for Distributed Search, metasearch, peer-to-peer search peer-to-peer search Indexing web content Local and mobile search Multimedia Web Search Survey analysis and query processing Search comparison analysis and evaluation Search user behavior and log analysis Search uis and interaction Search for social and real-time content Semantic search, faceted search and knowledge graphs Sponsored search Task-oriented search Vertical portals and search Voice search, chat search and dialogue search Web crawl Zero query and implicit search Web Mining Algorithms and systems Web-scale mining clustering, web data, classification and summary of entity, event and relationship mining Data extraction, integration and cleaning Discovery-based network and community network mining Geo- and location data analysis Knowledge acquisition and automated building of knowledge Extensive graph analysis Multimodal data reliability and reliability modelling of network data mining NLP online mining Online and streaming algorithms for Web data Opinion mining and attitude analysis Network traffic and log analysis Network measurements, web evolution and web models Web recommendation systems and algorithms Mobile mining Neural architecture for web search and mining Network search and data mining under privacy restrictions Social search , Mining and other applications Personal assistants, dialogue models and conversational interaction Joint search and answering questions Social network dynamics Human computing and crowdsing Influencing and virus marketing on social networks Instant messaging and social networks Prediction of links and communal detection Location-based social networks Search for and extraction of data generated by crowdsorting and collaborative content Sampling, experimentation, and evaluation on social networks Social media analysis: blogs and friendship networks Social network analysis, theories, models and applications Social reputation, influence and trust Social labelling User activity modelling and exploitation Interpretable models of individual and social behavior Authors are explicitly prevented from submitting papers that do not clearly present their contribution to previous works - which contain only additional results and do not provide significant progress on current approaches. Shipping instructions The originality of the shipments must represent new and original work. Simultaneous transmissions are not allowed. Documents published in any peer-reviewed journal or conference/workshop or currently under review or submitted to other meetings or publications during the review shall not be submitted to WSDM 2020. Online and/or presented orally or as a poster in places where there are no official procedures are permitted. Please note that if they are available online (e.g. via arXiv) and not anonymous, their headers and abstract items must be sufficiently different from the delivery of WSDM to limit the risk that direct search will violate the double-blind verification procedure. In addition, the ACM has a strict anti-plagiarism and anti-complacency policy. All previous work shall be duly mentioned. The shipping documents shall be submitted in PDF format in accordance with the new ACM format published in the ACM Guidelines and a general sample of sigconf shall be selected. Shipments shall not exceed eight pages, including diagrams or attachments, and shall not exceed one additional reference page. All non-standard fonts must be embedded in PDF files. Shipments must be independent and in English. After downloading your shipment, check the copy stored on easychair. Shipments that do not follow these instructions or that do not display or print correctly can be rejected without verification. PDF files submitted to WSDM 2020 must be prepared as a double blinding: the document submitted must not contain any author information and shall not contain citations or discussions about related work that would make the author's task obvious. Note, however, that it is acceptable to explicitly refer in the document to companies or organizations that provided datasets, hosted experiments, or deployed solutions. In other words, instead of stating, for example, that the experiment was conducted using logs of a large search engine, authors should refer to the search engine by name. Reviewers are informed that this does not necessarily mean that the authors are currently affiliated with the said organization. In order to support the identification of the reviewer driving conflicts of interest, a complete list of factors shall be specified at the time of transmission. Only in exceptional cases may PC Chairs grant permission to make changes to the paper authors' list after it has been submitted and approved. Review process Each document is reviewed with at least three PC members and a senior PC member. Acceptance decisions take into account the novelty of paper, technical depth, elegance, practical or theoretical effect and presentation. WSDM 2020 uses a combination of a mono-blind review and a double-blind review. The papers are double-blind to regular PC members, but paper metadata (including authors) is available to the SYR to check undisclosed conflicts of interest and ensure the integrity of the review process. Contact your computer chairs at the address below if you have any questions about the shipping or verification process. Reliability The algorithms, resources and methods used in paper shall be described Fully. Authors may: additional material, including detailed descriptions, test materials or code. However, this information is not part of the appropriate transmission and is only read at the discretion of the evaluators. Where appropriate, authors are encouraged to use publicly available test collections and the latest baselines. Consider sharing mid-level/final experimental results and code with the research community. Publication and presentation All approved papers are published in ACM's digital library. For each paper, there must be a registered author who presents it in person in the WSDM 2020 form. At the conference, all magazines will be given a place in an interactive poster session to encourage discussion. In addition, the selected documents will be presented in plenary sessions in the case of either lengthy or short discussions. Other presentation options, such as a short video presentation, may also be offered during approval. Authors should note that the official release date is the date on which the procedure is available in the ACM Digital Library. This date may not exceed two weeks before the first day of the Conference. The official publication date affects the deadline for patent applications related to published work. Conflict of interest policy All factors must report conflicts of interest. Which constitutes a Conflict of Interest (COI) You must report the assessor/author as a conflict of interest, where the following associations exist: an employment relationship with the same institution or undertaking, irrespective of the geographical/local employment of the same institution or undertaking, he has received an honour, scholarship or grant from the institution or undertaking during the last 12 months of costs (unless modest, such as reimbursement of seminar costs, diploma honours, and so on), working for the same institution or company during the last 12 months as a co-author of a book or paper in the last 24 months, another principal investigator of a funded grant or research proposal over the past 24 months, actively working on any project in conjunction with a relationship between an advisor and counselor with a close personal relationship degree in a family relationship, regardless of the time spent after graduation, we generally expect writers, PC, organizing committee and other volunteers to follow ACM's conflict of interest policy, as well as the ACM's code of ethics and professional conduct. Offences of originality, double consignments or conflict of interest papers which are supplied and which do not meet the requirements of length, formatting or originality, or which are delivered in two places (including papers with significant overlapping), shall be rejected without verification. Consideration of PC chairmen and steering committee additional sanctions, such as temporary or permanent venue bans and sponsorship of SIG venues. Similarly, the fact that the author does not disclose all coi group treatment or referees who give a review on paper with an undisclosed COI value can lead to similar sanctions. You will be prompted to contact PC Chairs if you have any questions about the terms of origin, dual submission, or conflict of interest policy. Key Dates Paper abstracts due: 12.8.2019 Papers are due: 16.8.2019 Paper advertisements: 12.10.2019 Conference: 3.-7.2.2020 All deadlines are at 11.59 pm, anywhere in the world (Alofi time). Contact information All questions about shipments should be emailed to wsdm2020@easychair.org. Mounia Lalmas (Spotify) Wei Wang (University of California, Los Angeles) Co-chairs of WSDM 2020 General questions about the conference should be for public chairs: wsdm-2020@googlegroups.com.
