Spotify is a streaming music service with various device connection. You can listen to more than 35 million songs and podcasts in an ever-growing musical library. Incredible playlists, social connectivity and cross-platform ability make Spotify an obvious choice for music fans everywhere. Spotify free offers unlimited music streaming with moderate advertising and up to six rail ships per hour on mobile. Blow through those ships and you listened to last year's crippled songs. If it's not your first run with the service, Spotify on the iPhone should look familiar. Spotify maintains its signature black and green screen on all devices. Return listeners will see musical suggestions take many of the home screen based on a tape you are tuned in or playlists you've created. There is one big (and annoying) difference when the leap from laptop to iPhone, though: you can't rewind a song or choose a specific song. You're stuck with thrill down. Goodbye chronological play. Yet pre-made playlists where this digital music service shines brightly like a diamond. Where other digital streaming services offer the same old ho-hum playlists based on genre, Spotify curators offer content. You can still expect the doll, hip hop, and country genres, but enjoy other moods such as Dinner, Comedy, Romance, and Commute to set the tone of a mixture of artists. This digital music service is anything but ordinary. The Made for Your playlist features a new daily mix for every day of the week. These dishes from your favorite songs, with some surprises tucked in. Each made for your list includes some of the popular bands in the tagline so you can still choose and choose what to hear according to your mood. Stuck in a music rat, but don't want to wander too far from your favors? You don't have to be with the Discover Weekly playlist. Spotify creates two hours of songs every Monday based on your last played songs, albums and similar artists. You don't have to hunt for fresh content on your own. The more you use Spotify, the better the service's algorithms when figuring out the kind of tunes you want. Living and breathing music? Spotify allows for a global audience with international artists. If finding the latest and biggest up-and-comers is your ram, Spotify does the bone-work, uncover new music for you every week. Followed artists and related music matching your recent listening appeared in Spotify's New Release Radar every Friday, while independent artists took their moment in the sun every Wednesday. Be warned in advance: explicit tracks are often included in the pre-made playlists. Change the settings to skip adult content. Either way, you can always count on fresh Even with all the large available playlists out there, you can still create your own. Share your lists with the world or not. Have you come a big event or family road trip? Spotify offers a fun twist with joint playlists. Invite everyone (with good taste in music, of course), to add clips to a custom playlist so that everyone can have a say in what's being played. Social music sharing Should Not Listen alone. Spotify does social and does it well. Follow other accounts for accessing other unique playlists. Connect

Spotify to your Facebook account to see (and laugh over) your friends are listening to, or view shared playlists. If you're known for sharing amazing music, Spotify allows you to spread music love across social networks, from Facebook (and Messenger) to Twitter to Tumblr and even Skype, among others. Do you have an unexpected music taste? It can be a good idea to hide your three-hour folk music marathon from your heavy metal friends. With Spotify you can. Hide your listening activity or go anonymous via settings to save face. Where can you run this program? Spotify is compatible with iPhone, iPad, and iPod touch. You will need iOS 10.0 or later. Is there a better alternative? There is no end to music on demand platforms, but Pandora and Apple Music are still fighting it at the top of the cards. Of the three free music titans, Pandora falls short: fewer features, the least amount of music selection control, and skimpy social media sharing options. Still, inches off a song on Spotify past the six free ships won't stop playing like it does on Pandora. Or all the streaming music apps, Apple Music is matched to Spotify in terms of features. Both services offer the off and after exclusive music jam or artist album release (in addition to exclusive podcasts) but in this case, Apple Music has the slight lead in terms of quantity. The clunky iOS account setup is hearty, even if curated playlists are well done. Apple Music also boasts a great musical variety that surpasses Spotify's with its unique DJ-style radio game. But Apple Music has one major disadvantage and a potential deal-breaker: the service is not free. Spotify has a substantial music catalogue. Stick to Spotify basic for star songs anytime, anywhere, free of charge. Should you download it? Yes. With enough features found in the free version, multi-device compatibility, and tens of millions of tracks, Spotify is a freebie service worth using. Source: Hayato Huseman/Android Central One of Spotify's best features for Premium members is the ability to save local copies of albums and playlists for playback lineback. This is a great way to cut back on your monthly data usage, and of course, it makes you listen to your favorite songs without a data connection, which is especially useful for regular travelers. Unfortunately, Spotify doesn't immediately make it clear how to save you locally so we're here to help. Products used in this guide How to find your downloaded music download for offline playback is easy; all you have to do is tap the Download button at the top of any album or playlist. This is the difficult part, as the default layouts only show your offline music between the rest of your Spotify library. The simple solution is to use filters to sort your library only by download-only. Open Spotify. In the Your Library tab, open an album or playlist that you want to save for offline playback. At the top of the track list, switch the switch next to download. Source: Hayato Huseman/Android Central Exit back to the main playlists or albums view, then scroll down to reveal the search and filter tools. Tap Filter. Under Filter, tap. That's it! From here, your Playlists and/or Albums view will only show clips that you saved for offline playback. You can use different filters in each view to make for a more streamlined process, i.e. setting Albums to show only downloads, but to leave artists unfiltered so you can still find the rest of your library just as easy. Play around with the layout that works best for you, and don't forget to set your music to download in high quality if you have the storage space for it!
