Body waxing is a hair removal method that uses thick wax to dry on the surface and pull the hair out of the root. Most body waxes come to a solid, rigid consistency when it is at room temperature, so applying it to the skin can be a problem. In order to make the wax work easier, you can use a device made by GiGi called wax warmer, which brings the body wax to a high enough temperature that you can spread it, making the whole waxing process much easier. Connect the wax warmer into the electrical outlet and slip the cardboard collar around the hole at the top. This will protect the warmer from the wax mess. Remove the lid from the hard GiGi wax and lower the container into the hole in the wax warmer. Leave the wax in heat for at least 20 minutes on H until the wax appears as thick honey. Wash the area to be waxed with GiGi pre-lotion and pat the skin dry. Treat the skin with GiGi numbing spray to dull the pain with wax after cleaning. Lower the heat to L and remove some of the heated wax using a plastic spatula. Spread a vertical row of wax that is no wider than cotton strips. Place the cotton strip on top of the wax and press it down using the knuckles. Work your knuckles in the same direction as your hair growth. Keep the skin down firmly and use the other hand to remove the cotton strip from your skin. Pull the strip away from the direction of hair growth. Leave warmer turned on while you pour 1/3 cup of pure wax into the wax pot or chamber. However, the warmer should only be warm enough to melt the wax and not so hot that it can cook the wax cleaner. Place the wool pad on the camera and leave it for one to two minutes or until the pad absorbs the wax and wax cleaner. Wipe the woolen pad around the wax pot or chamber to remove the rest of the wax. You can use a wooden spatula to rub the wool pad around the camera so you won't have wax on your hands. Wipe the woolen pad until all the dried wax has been removed from the pan. GiGi Creme Wax melts at a lower temperature, allowing for more convenient use, especially on sensitive skin. The more subtle application of GiGi Creme Wax helps in removing unwanted hair. In addition, GiGi Creme Wax leaves the skin silky smooth without wax residue. For use with GiGi Natural Muslin, bleached muslin or tissue epilative strips. Glyceril hydrogenated rosinat, dipropilen glycol dibenzoate, Polyester-3, Silica, Aroma (Perfume), Benzil Benzoate, Aluminum Hydroxide, Titanium Dioxide (CI 77891), Yellow Lake 6 (CI 15985), Violet 2 (CI 60725) PREP Place the collar on GiGi warmer. 2. Remove the plastic lid and place it in the Set the temperature to high for 15-25 minutes and then set low until the wax has a thin/honey consistency. 3. Check the wax temperature on the back of your wrist before waxing. READY FOR WAX!1. Clear the area that needs to be epilatted with Pre-hon the detergent and then pat thoroughly to dry with the tissue.2. Apply a thin layer of GiGi Pre Epilation powder to absorb moisture and oil. 3. Holding the applicator at a 45-degree angle, apply a thin layer of soft wax in the direction of hair growth. 4. Place an epilative strip over the wax and

wipe the strip firmly in the direction of hair growth. 5. Keep the skin tight and pull out the hair removal strip (parallel to the skin) in one quick motion in the opposite direction of hair growth. 6. Immediately apply firm pressure to the epilate area with the pillow of the fingers or palm of the hand to soothe the skin. Pro Tip: Use an epilative strip to remove wax residue from your skin 7. Never apply soft wax to the newly epilate areas. AFTER WAX CARE: 1. Apply GiGi Wax Off to remove any wax residue and condition. 2. Apply post Wax Cooling gel liberally to the skin after waxing to help soothe irritation and redness. 3. To keep waxing results longer, smooth on GiGi Slow growth, hair minimiser, every day after a shower. Wax should not be performed more than once every ten days at the same sites. It usually takes a long time for the hair to grow to the length of one quarter of an inch that is needed for effective removal. - Do not use wax on those who have phlebitis or diabetes without the doctor's consent. - Never apply wax to your eyelids, inside your nose or inside your ears. - Don't let the customer scratch the area. Scratching or intense friction will irritate the skin. - Don't rub the strip for more than one time. Excessive friction leads to redness. - Never apply wax to your nipples when removing hair from the chest area. - Avoid using wax on customers who have a history of cysts or boils, and certainly never on customers with an active herpes virus (cold ulcers). - Do not use foods containing alpha hydroxy acid (AHA) such as small, dairy, Tatar, glycol and cytic acids or beta-hydroxy acid (BHA), such as salicylic acid before and after waxing. These products can cause irritation or sensitivity to the wax area. - Don't wax over areas that have dermal fillers. The leg image of Letitia Wilson Fotolia.com skin that is smooth and without hair is nice to the touch and looks healthy. This look can be achieved with a wax kit such as GiGi wax kits. These kits are an easy-to-use hair removal system, providing results similar to those in beauty salons. Several GiGi kits are available depending on the desired hair removal, including the Brazilian bikini wax kit, the Mini Pro Wax kit, the Professional Brazilian Wax Kit. The instructions for these kits are similar. Clean the area of the skin that will wax and exfoliate to remove the dry skin. Remove the lid wax and heat it in the microwave for 30 seconds. Use a large applicator to break the surface of the wax. Go back to the microwave and heat for 15 seconds, and break it up again, then then 15 more seconds. Continue until you can stir the wax easily and it turns into honey-like consistency. Do not heat for more than one minute. Allow it to cool until you can easily touch it. Remove from the microwave thoroughly. Some of The GiGi kits, such as a professional wax kit, include warmer wax, which is used instead of a microwave to heat wax. Use Pre-Hon lotion to clean the area, which will wax and pat it dry with a cloth. Check the temperature of the wax before applying it to the skin. Apply a thin layer of pre-epilation oil to the skin. Using an applicator, apply a thick layer of wax in the direction of hair growth. Allow it to cool on the skin for 30 seconds, after which it will be soft. Some of the GiGi wax kits, with the exception of the Brazilian bikini wax kit, contain muslin strips that should be placed on the wax as soon as it is applied and then ripped together with wax. If the strips are included, a thinner layer of wax will be used. Keep the skin tight and quickly remove the wax in one motion in the opposite direction of hair growth. Keep the wax as close to your skin as possible. Don't re-wax in this area. Use your hand to click on the waxing area to clean it. Apply the Wax Off solution with a thick layer on the wax area, which will eliminate the remnants of the wax and moisturize the skin. Apply slow growth daily to the skin after a shower. This will keep the skin smooth and hairless longer. The skin can be red for hours or even days after waxing, and that's fine. Keep your skin hydrated at all times to avoid redness, rashes or bumps. Use the kits exactly for what they are designed. For example, do not use a bikini wax kit all over your body as it is designed for rough hair. Be careful with waxing, which can be hot. Check a small area before applying all over the skin. This can lead to burns, scars or blisters. Steve Mason/Digital Vision/Getty Images Wax is one of the hair removal techniques that can leave the skin silky smooth for a few weeks. Gigi All Purpose Honee Wax is a natural formula that can be used even on the most sensitive skin. Contains natural honey and beeswax. This wax removes the hair and leaves the skin smooth and soft without irritating it. With this natural waxing, you can have soft skin without worrying about shaving or removing your hair for at least 4 weeks. This method of hair removal is quite simple, though it is due to a mild pain that lasts only a few seconds. Wash the areas of the skin that will wax. Exfoliate using scrub or cleaning gloves to help smooth skin by removing dead skin cells to prepare it for waxing. Dry with a towel. Warm All of Honee wax's goals are incorporated warmer or in the microwave for about 10 seconds or until it turns into liquid. Touch the jar and if it doesn't feel too hot, dip your fingertip into the wax thoroughly. If the wax is warm but not hot, check it on the inside of your wrist. Wax should feel like and warm, but not too hot. Dip the wooden spatula into the wax and pick up a quarter of the size of the amount or more. You need a thin layer the size of an epilative strip that is included in the kit. Smooth a thin layer of wax on the skin towards hair growth, that is so the hair down is smoothed out. For example, when applied to the feet, the wax is edgy in a downward direction. Cover the wax on the skin with an epilating strip, which is included in the set. Smooth it with your fingers in the same direction as you applied the wax. Stretch the skin around the strip and keep it tight. Pull the strip in the opposite direction of hair growth quickly. Make sure to keep the strip as close to your skin as possible as you pull it. You will feel a slight sting and may experience mild redness afterwards. Don't apply any more wax in the same area, even if there are some hair left over. Moisturize the waxed skin with GiGi After Wax Cooling Gel, which will help reduce pain and redness. This gel is included in the wax kit. Use lotion daily to keep your skin smooth and hair longer, such as lotion, which slows down hair growth, or slow-growing skin maintenance Lotion as recommended by GiGi.
