This is because the method varies depending on the manufacturer, ranging from simple procedures to other very complex, passing through others that depend on the manufacturer to allow intervention. Here's how to unlock the loader below. What is a loader? How do I know if the loader has been unlocked? How to unlock your Android downloader First, let's be clear: there is no single method to unlock the downloader that works for all phones. Each manufacturer implements the function as he sees it best, so that the procedures vary widely. However, unlocking is essential for those who want to install alternative ROMs on their phone. Second: Regardless of the method, unlocking the loader erases all data from the mobile phone. So, back everything up before you start the procedure. Now yes, let's see how to unlock the downloader in some way. 1. ADB and Fastboot ADB and Fastboot method by default, with tools provided by Google. It works with most phones, but can't be recognized by some devices. The procedure is long, so follow step by step calmly. In the browser (on the PC) access developer.android.com; Download and unpack a packet of ADB files; On Android, open the Settings app and click on your phone; Click Information about the software; Click on the build number (or assembly number) several times until the phone lets you know you're a developer; Go back to the basic settings screen; Click the Developer/Developer Options button On some devices, the option is on the System menu; Turn on the USB Debugging key and press the OK button; Go back to your computer, click on the Windows 10 search box, and enter PowerShell (no quotes); Tap the right button on Windows PowerShell and then run as an administrator; Connect your phone to your computer via a USB cable; If the message allows you to debug the USB computer, check the box and click THE GOOD button; Enter the adb reboot downloader and tap Enter to restart your phone in Fastboot mode; Enter the fastboot oem unlocking command and click Enter; Mobile phone will show Requesting confirmation of the case; Use the volume buttons to go to the Yes option and click the Power button to confirm. And that's it. 2. For Motorola phones, Motorola is associated with unlocking phones with one key connected to each device's ID. To get it, you need to ask the manufacturer. You'll also need ADB on your computer, just like in the previous method. Go motorola-portal-global-custhelp.com click Continue anyway; Fight with your Motorola account or create a new one; Repeat the steps from 1 to 13 of the previous method until you restart the phone in Fastboot mode; Enter the fastboot oem get_unlock_data click Enter; You'll see a long line of numbers from 5 lines. It's a mobile phone ID; Copy the number lines, without spaces or words, like info and downloader, in the order in which they were shown on the screen; Insert a line in the box to make sure your device is unlocked on the Motorola page; Can my device be unlocked?; Accept the terms of Motorola's contract and click the Request to Unlock key; The unlock key will be sent to Motorola's registered email, copy it; Go back to PowerShell, enter fastboot oem unlock chave_de_desbloqueio and click Enter. And that's it. Important: Motorola tells you that unlocking the loader causes the device's warranty to be lost. The list of devices compatible with the official tool, check out the manufacturer's website. 3. For Samsung phones Most Samsung phones today come with the ability to unlock the downloader factory available through developer mode: On Android, open the Settings app and click about the phone; Click Information about the software; Click on the build number (or assembly number) several times until the phone lets you know you're a developer; Go back to the basic settings screen; Click the Developer/Developer Options button On some devices, the option is on the System menu; Click Unlock OEM and confirm; Turn off your phone, turn it on in download mode and connect it to your computer via a USB cable. Depending on the device, the button combination can be the Power and Decrease Volume Button button or the Bixby and Volume Decline button; Tap and hold the increase the volume button until the screen changes to the downloader unlock option; Click the Volume Increase button and the loader will be unlocked. Unlocked.
