We at CYBEX strongly recommend that you replace the place after any accident. This is because tiny cracked hair, which cannot be visible to the naked eye, can appear in the plastic parts of the seat after an accident. These cracks can pose an increased safety risk. My car seat is faulty, how can I repair it? Please contact the seller where you bought the CYBEX location. They will deal with this issue on your behalf. Where can I get spare parts for my product? You can order spare parts from a specialist who is close to you. To find a store near you, just go to the locator store on our website: Can I install a seat in the front passenger seat? The car seat should only be installed in the passenger seat if the front airbag has been disabled. Important: Under the Traffic Code, it is against the law for your child to travel on a seat with an activated airbag. Placing a child in the passenger seat with an activated airbag puts your child at risk of serious injury. For this reason, CYBEX always recommends installing a car seat in the back seat of the car (if possible behind the passenger). Statistics show that this is the safest place in the car. In a head-on collision, the child has a large crumpled area in the back seat where the front airbags do not endanger your child's safety. If you have no choice but to use the front passenger seat, please make sure the seat is pushed as far as possible. Can my child sit in a car seat in a position in front of his face? No, under the R-129 standard, children must travel in a position facing the rear until they are at least 15 months old. The muscles of your child's spine and neck are not yet sufficiently developed to cope with heavier loads. In the event of an accident, the child's head moved forward with very high force. The muscles of the child's spine and neck are not strong enough to hold these forces. In the rear seats, the child car seat works as a protective shield and protects the child's sensitive head and neck. Can I leave my child in a child's carrier, for example, at home? CYBEX child car seats have been designed to offer the best possible protection for a child while driving without affecting the child's spine in a negative way. However, we do not recommend leaving the child asleep inside the children's car seat of the house for periods of time. What clothes should my child wear while sitting in a car seat? Thick clothing prevents the harness from lying tightly against the body. This incorrect belt positioning can cause harness slips off For this reason, your child should wear casual clothing. Thick clothing such as winter jackets should be avoided where possible. Once your child has been positioned in the seat, he/she can be covered with an extra blanket for warmth. Can I use the car seat and base even when activating the side airbag? Yes, the side airbag can remain activated when using the car seat. Should both sides of the Treads (LSPs) be expanded? L.S.P. side impact protection must be folded on the side closest to the car door when the seat is installed either on the right or on the left side of the rear seat. In this way, the best possible protection is provided in a collision. In this case, it is important to ensure that only the side protector closest to the door is extended. If the seat is installed in the middle of the rear seat, the L.S.P. linear side impact protection (L.S.P. system) should not be used under any circumstances. How do I set up an integrated folding canopy? When an integrated folding child seat canopy is not used, it is hidden behind the visor located in the back of the seat. Lightly lifting the visor, the canopy can be adjusted to your liking. To return the canopy to its original position, lightly lift the visor again to release and fold the canopy. What kind of CYBEX stroller can I use CYBEX child car seats with? CYBEX children's car seats were specially designed to be part of the travel system. Adapter connects CYBEX Aton with all fully lying CYBEX strollers (Callisto, Topaz, Onyx). CYBEX baby carriers are also compatible with other stroller brands including Bugaboo, Baby Jogger and Mamas and Papas etc. No, this seat is not approved for use on the plane. What if my child's head nods forward on the chest, even if the marking indicates that the car seat is horizontal? If the seat is mounted with the vehicle's seat belt, the markings on the car seat serve as a guide to whether the seat has been installed horizontally in the vehicle. The line of reference is the level of the road. If you have a small car, for example, the angle of the rear seat can be a little steeper, thus different from the level of the road. If you align the child car seat to the level of the back seat, the car seat will be positioned in the wrong car, causing your child's head to nod forward. So please make sure the seat fits the road level. 1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 18 19 20 21 22 23 24 25 26 22 7 x28 29 30 31 32 33 34 35 36 37 38 39 40 41 42 43 44 45 46 47 48 49 50 51 x52 53 54 55 56 57 58 59 60 61 62 63 64 65 66 67 68 70 71 72 73 74 75 X76 77 78 79 80 81 82 83 84 85 86 87 88 89 90 Home Offers Clearance Travel Carseats Home Offers Clearance Travel clearance clearance to Carseats Carseats Scroll to page 2 of 17 advertisements Thank you for your participation! Your score is very important to improve the work of artificial intelligence, which forms the content of this project The home page offers Clearance Travel Clearance Carseats Following in the footsteps of its predecessors, such as the award-winning Aton 2, the group 0 test winner in the 6/2012 Stiftung Warentest test of the children's car seat, Aton 5 adds to the features of the successful Aton series. Unique safety features, such as a height-adjustable headrest with integrated seatbelt guides that improve the excellent emergency safety of the absorbing shell in conjunction with the crash test of the proven L.S.P. system even more, and new comfort features, such as the huge XXL solar canopy, add the perfect baby carrier for premature babies and very young newborns. The new feature allows for the perfect sitting angle and ensures that young children lie with their heads, neck and chest perfectly aligned. Thus, the risk of suffocation of the head falling forward is significantly reduced. The child car seat can be used with a belt or from one of our additional bases for easy installation.
