## 300 ideas for physics ia

Mirrored from King's School, Worcester UK 1\_curric/ investigations/past\_ investigations.html mind/physics.htm 1999 1 Factors causing fluctuations in perspex suppression. 2 Water flow over incisions and weas. 3 Shrinkage of adjacent coil coils due to current through them. 4 Study of factors related to the flow of powders and crystals. 5 Test light from a 1.5 V bulb and a relative amount of light of different wavelengths from it. 6 Change in parachute load/speed. 7 Splash test. 8 Behaviour of thyroturons under different conditions. 9 Unloading the crown. 10 Forced convection. 11 Fiberglass connections. 12 Araldite bonds. 13 Vibrations caused by drum sound in a metal rod. 14 Creeping into copper wire. 15 Effect of shelving on wave breaking. 16 Strengthening the ice by sawdust. 17 Aerodynamic forces in the car. 18 Liquid flow meter. 19 Piezo electric effect. 20 Use eddy currents for &gt;n-destructive testing. 21 Wind powered generator. 22 The formation of a water tornado. 23 Precipitation of electrostatic particles. 24 Hitting the water with the surface of the water on the aircraft. 25 Distribution of airborne pollutants. 26 Electric analogue for water flow through locks. 27 Pouring - factors that make the perfect beak. 28 Construction and use of a variable-interval coincidence counter for the study of short-term isotopes in radioactive decay. 29 Factors which may be related to the suspension of a chain of uniform weight/length of the unit. 30 Smoke rings. 31 Effect of different short circuit periods on the regeneration rate of the dry cell. 32 Pressure/volume ratio of the rubber balloon. 33 Keeping drops on the hotplate. 34 Feasibility of solar energy. 35 Optimal camera aeration with contact hole 36 Microwave absorption. 37 Examination and analysis of rotational vortices. 38 Indoor sound control. 39 The impact of internal pressure on the achievement of football. 40 Conductivity of electrolytes in wood. 41 Absorption of fluids by filter paper. 42 Shapes of water columns flowing from the vertices. 43 Shaded magnetic probes. 44 Ionization of air generators and van de Graff. 45 Construction of an automatically functioning burette. 46 Use of a photosensitive device as a photometer and an application for light emitted from a light bulb. 47 Energy stored in the clock spring. 48 Investigation into tying: Why is it clinging? 49 Manufacture of the pump using the movement of ions in the magnetic field. 50 Magnetic suspension. 51 Temperature in flames. 52 Absorption of electromagnetic waves through glass. 53 motor and dynamo effect on liquid conduction. 54 The sound of the sea, as heard in the sea shell is. 55 Fan performance 56 Swingarm brightening valve to improve engine performance. 57 Phase change of the induction motor. 58 Tassels in soap Videos. 59 Heat pulse in rod 60 Hovercraft. 61 Properties of foam material. 62 To that end, the Kettle. 63 Large room akustics 64 Relationship between wavelength and changing concentration in fluorescent substance 65 Rotating shafts. 66 Craters. 67 @king accelerometer. 68 Droplet shape. 69 Holes in magnets. 70 Oscillations of wire rings. 71 Does the flame conduct electricity? 72 Thermocuters with various metal connectors. 73 Frequencies of sound from metal plates. 74 Quantitative transmission of radiation heat. 75 Puncture properties of paper. 76 Outsuch of mobile gases. 77 Properties of plastic leather. 78 Transmission of sound through water. 79 Effect of pressure on the spark plug. 80 Rate of subsiding of metallic particles. 81 Testing of electrostatic speakers with a load. 82 Shape effect on rowing blade performance. 83 Some of the physical characteristics of the brake fluid. 84 comparing the propeller string with its rolling speed. 85 In order to examine the stream of fish lining in relation to their flow through the water. 86 Measuring capacity using a unitalite circuit. 87 Amplifying ice with paper. 88 Examination of the design of the windmill. 89 Perfect perforations. 90 Methods of using waves and tides to produce electricity, using models in the laboratory. 91 Harmonic in guitar. 92 Behaviour of bubbles floating in liquids. 93 Beta-particle emission energy spectroscopy. 94 Characteristics of antenna arrays. 95 Variability of the alpha particle range in low-pressure air. 96 Does water absorb ultraviolet light? 97 Experiment in speech synthesis. 98 Nature of water vortices. 99 Three-dimensional waves in jelly. 100 Diesel performance. 101 Effect of wavelength on the angle of refraction of water waves. 102 Dust and static as a turntable problem. 103 Multivibrator used as engine speed control. 104 Braking system using electromagnetic induction. 105 Properties of vibrating twine using Lissajou figures. 106 Factors affecting aerofoil lifting. 107 Magnetic amplifiers. 108 Impact of the network between two electrodes in a partially ionic environment. 109 Reverse dispersion of beta particles. 110 Strength and domain structure of magnets at different temperatures. 111 Hull design. 112 Resonant laminas. 113 Transfer photos. 114 interference produced by electrical switches. 115 Sound attenuation by Polyethylene. 116 Fishing strike times. 117 Ball path in the air. 118 Effect of fiberglass thickness in temperature distribution along a brass rod heated at one end. 119 Vibrating times of some wires after initial positioning. 120 Electrostatic cooling. 121. In order to examine the effects of salt and sawdust on the fragility of ice. 122 Absorption spectre of plant pigments. 123 Pack of xylophone rods. 124 Flight of paper aircraft and aerodynamics involved. 125 Catapult, performance measurement methods. 126 To show stress in sheets. 127 Visibility of color in the dark. 128 Lead creep. 129 Use of a search coil to measure magnetic fields at high frequencies. 130 Eddy current heating. 131 properties of 4-layer wool, which make it useful in woolen clothing. 132 Some useful properties of nylon fabric. 133 The power of ice girders. 134 Radiant intensity from GHz oscillator. 135 Electronic feedback. 136 Aeronautics of flies. 137 Load-bearing properties of cobwebs. 138 Minimizing feedback in the microphone system. 139 Analogue for polarization in hills, etc. 140 Effect of electromagnetic waves on admissibility. 141 Effect of smoke particles on the wavelength of sound. 142 Design, operation and use of spectrum analysis for musical instruments. 143 Frequency of vibrating warm containers with liquids. 144 Water trough as accelerometer. 145 Factors affecting the suitability of materials for use in umbrellas. 146 Fluid viscosity in flywheel bearings. 147 Potential change in the conductive liquid tank. 148 How does the weight of a vehicle with an air track affect its performance? 149 Shapes and oscillations of soup bubbles. 150 Creeping in rubber. 151 Support ball I in the stream. 152 How long does the light bulb flash last? 153 Investigation into the conduct of a commercial radiometer. 154 Contact resistance. 155 Switch switching speed. 156 Forces in the skin of the balloon. 157 Schlieren photography. 158 Capacitor microphone. 159 Comparison of three speakers. 160 Electrical impulses in the skin. 161 Effect of different divisions on the overall performance of the sea propeller. 162 Particle speed from source 241-Am. 163 Engine capacity 12 V. 164 Transistor as zener diode. 165 Air bolt performance. 166 Spiral flight paths of various winged seeds. 167 Electric ice resistance +water with salt addition. 168 Behaviour of wood under stresses, strength and rigidity of various beam and girder designs. 169 Dashpot damping method. 170 Electrical characteristics of the solar connection. 171 Keeping large waves in a narrow channel. 172 Change of friction at the relative speed of two objects in contact. 173 Change in the speed of the mechanical wave in the line. 174 Breaking glass. 175 Noise in the hot resistor. 176 Steel ball restitution time on an iron surface. 177 Performance of the paddle wheels. 178 Effects of detergents reflection of light by cotton. 179 Relationship between humidity and the speed of sound in the air. 180 Water rises on polymer threads. 181 Acoustic properties of plastic moulds. 182 Internal conduction of thermistors. 183 Vibrating plates. 184 Photoelectric effect in semiconductors. 185 Effect of load on cells. 186 Balloon burst. 187 Microwave oven for detection and detection. 188 Oscillations and deflection of the suspension bridge model. 189 Defealing drops at high voltage. 190 Effect of magnetic fields on electrolysis and semiconductors. 191 Electric weighing machine. 192 Damping of oscillations in liquids. 193 Fan belt performance. 194 Finding current in a floating aluminium ring. 195 Venturi Principle. 196 Electromagnetic flowmeter: use the Hall effect in liquids to measure the speed of ion fluid through a tube. 197 Investigation of sails. 198 Thermoelectric effect in metal knitting and foils. 199 Effect of salt on ice on roads. 200 Why do soap movies crack? 201 Practicality of charging dry cells. 202 Effect of internal energy on stress/strain ratio. 203 Effects of a black and white color-producing disk. 204 Ultraviolet absorption by water. 205 High-speed strikes in the sand. 206 Effect of concentration and temperature on the conductivity of the solution. 207 Effect of magnetic field on current in termionic LEDs. 208 To find the best tap for Polish plate glass. 209 Hall voltage in electrolysis. 210 Characteristics of LDR. 211 Sedimentation. 212 Bumping and pain l,ng. 213 Water wheel performance. 214 Properties of blu-tack adhesive. 215 Conductivity of damp wood. 216 Reduction of friction with oil and grease. 217 Additional multi-beam display for oscilloscope. 218 Rotating liquid surfaces. 219 Electrically measured forces. 220 Cross-connections of rubber. 221 Physical properties of a system which accurately measures the distance by means of light disturbances. 222 Flight characteristics of the shuttle tap. 223 Strength of the reological gel and other physical properties of gum solutions used in the food industry. 224 Polarisation of diffused light. 225 Arc performance. 226 Dispersion of soil by falling water. 227 Origins and forms of waves on interfaces. 228 Construction of air flow meter. 229 Fresnel lenses for 3 cm waves. 230 Paper clip. 231 Resistance and dislocation. 232 Conduction by low-pressure gas 233 Forced oscillations in mechanical resonance systems. 234 Electromagnetic clutch. 235 Dam backwaters. 236 Physical fitness of popular surfactants. 237 Factors affecting the reflection factor of the liquid. 238 Projective drops from the nozzle. 239 Functional properties of copper pipes on cooling. 240 Absorption spectre of plant pigments. 241 To perform and use a photometer to examine the light intensity of the lamp. 242 To try to find the perfect air track slider. 243 Construction and testing of the electrostatic speaker. 244 To find the best antenna design to give the strongest signal for horizontally polarized radio wave reception. 245 Growth of crystals. 246 Reflecting relay contacts. 247 Friction over the sale of footwear. 248 String phone. 249 Cooling rib effect. 250 Water condensation rate, etc. with electric field 251 Electronic guitar tuning. 252 Factors affecting infrared absorption performance. 253 253 plastic cups. 254 Cracks in glass rods. 255 Effect of makeup on ultraviolet light. 256 In order to examine the effect of soaking in water on the tensile strength of cluster paper. 257 Natural radioactivity of rocks. 258 Effect on the burning rate of the material in the electric field. 259 Effect of fluids on static bending of balsa wood - 260 Temperature changes with depth in liquids and colloids after heating. 261 Factors affecting regulation. 262 Movement of boats through narrow canals. 263 Effect of solvents and papers on chromatograms. 264 Paper strip in air stream. 265 Absorption of heat radiation from the surface. 266 Lead cells. 267 Particle consistency. 268 Thermopil performance. 269 Lecher wires. 270 Creating and cracking soap bubbles. 271 taking and testing a graphite tape microphone. 272 Ion recombinant time. 273 Relationship between conductive temperature and metal electricity. 274 Fog lamps. 275 Efficiency of energy transmission in the bicycle chain. 276 Currents caused by ionic solutions moving 277 Electrical properties in moist glycerol 278 Liquid phase secondary coil in transformer. 279 Frequency response of dielectric materials in capacitors. 280 Dehydration of the ship. 281 Penetration effects of air pistol pellets on plasticine and wood. 282 Lubrication of graphite. 283 Pipe capacity GM. 284 Hologram production. 285 Hysteresis in rubber. 286 Elastic properties of the line. 287 Water flow around u-bend. 288 Reflection of transmission and absorption of ultraviolet light by Polythene. 289 Properties of flour and water paste. 290 To investigate the factors affecting the lstrength of the pillar. 291 Thermos analysis. 292 Investigation into the depth of eye focus. 293 Factors affecting the bow waves produced by the boat. 294 Effects of turbulence on the performance of the aerofoil glider model. 295 Factors affecting the speed of squash ball. 296 meter wind speed with hot wire. 297 Strength of plaster. 298 Test P T F E. 299 Corrosion and cathode protection. 300 Moire fringe test as used in measurements. 301 Electrical fluid analogue. 302 Shrinkage of tissue paper water. 303 Analysis and synthesis of musical sounds. 304 Examination of tea diffusion by pouch. 305 Deflegation of fluids passing through the electric field. 306 Torque - curve r p m for diesel model. 307 Examination of the effects of stretching different plant tissues. 308 Stability of slopes. 309 Linear motor. 310 Hardness of pencils. 311 Humidity switch. 312 Forces on fences. 313 Rupert Drops. 314 Sea anchors. 315 Paramagnetism. 316 Forces between magnets. 317 Is eye colour due to light scattering? 318 Soldering irons of different composition. 319 Hysteresis in transformer. 320 Cloud chamber performance. 321 Factors sparks. 322 Movement of flexible pendulum. 323 Effect of reduced pressure on ionizing currents in the air. 324 Factors affecting the production of uniform bubble rafts. 325 Degree of deposition of particles from ecclesies. 326 Paper thickness measurement. 327 Speeds of selected ions in emoki solution. 328 Thermoelectron speed distribution. 329 Creating dunes 330 Water flow around obstacles. 331 For the construction of an accelerometer. 332 Nature of the pencil line. 333 Polarization of sellotape action. 334 Life story of a drop of water. 335 Effect of the oil on the evaporation of the liquid. 336 Loss of energy in reflections. 337 What causes flags to flutter? 338 Twine force. 339 Hand catapult accuracy. 340 Molten metal for water. 341 Investigation of photoelastics. 342 Resonance of wine glasses. 343 Leakage of the charge from the electroscope. 344 Speed measurement by doppler effect. 345 Metals - working hardening and heat treatment. 346 Rings formed by running water on flat plates. 347 Transient metal electrode potential from period 4. 348 Assessment of the chalk/array recording system. 349 Reverberation time apparatus. 350 Keep ink drops in water. 351 Race car performance. 352 Vibration caused by an electric motor. 353 Welding of electrical resistance. 354 Execution and calibration of the tensometry. 355 Diffraction halos produced by small particles. 356 Heat flow through crystals. 357 Twisting effect on 2 layer wool. 358 Reduction of vibrations on devices. 359 Stored energy/clock capacity. 360 Resonance of metal rings. 361 Manufacture of diffraction grilles. 362 Turbine blades. 363 Collapse of the light beam by an unchirited sugar solution. 364 Construction and use of the chart recorder. 365 Physical properties of chicken eggs. 366 Electrical properties of silver embedded on glass slides. 367 Millikan experiment with smoke particles. 368 Measuring water vapour pressure at different temperatures using microwaves. 369 The possibility of comparing abrasive properties with light. 370 Application of the Bernoulli principle to the design of chimney pots. 371 Change in tungsten lamp power and temperature as input power function. 372 Effect of electric fields on liquid evaporation rate. 373 Mechanical properties of plastic sulphur. 374 Potential method of dropping crack characteristics. 375 Optimal launch of flying discs. 376 Construction of the Uniplanor girder. 377 Apparatus for constant strength. 378 Absorption of alpha particles by gases. 379 Self-performance of metal springs. 380 The ways in which the glass rod transmits light. 381 Transmission of light by perspex. 382 Acoustic properties of kettledrum. 383 Strength of paper tissues. 384 Wave speed in the ripple tank. 385 Investigation into the optimal helicopter. 386 Sand erosion the base of the platforms. 387 Efficiency and energy loss in a small steam engine. 388 Vibration of the rubber sheet. 389 Factors affecting the physical properties of plasticine. 390 Concrete hydration. 391 Contact resistance. 392 Heat transfer in electric fields. 393 Thixotropic substances. 394 Slot effect in close-haul sailing. 395 Soap foams. 396 Stream of water in the Earth's gravitational field. 397 Rudder performance. 398 Bond with nail wood. 399 Ice brittleness. 400 Fire clay reinforcement. 401 Vibration of the air current transmission cable. 402 Wind-induced oscillations in laminate. 403 Electrical method of detecting small movements and vibrations 404 Characteristics of the speaker inside and outside the housing. Housing.
