## Space heater melted power strip

What's cooler than being cool? Be roasted warm. And when this crisp fall weather hits, the next best thing for an open fire is the heater can get up when the radiator or central system just doesn't cut it. If you've ever been shopping for one such portable device, you're probably familiar with the options: those long tower units that resemble radiators on wheels or a voluminous square box that screams a practical device in the worst possible way. We knew there had to be a better chance. Yes, lo and behold, it is! Here are our picks to heat in both small and large areas in style. And for Prime members, the cozy room is just a day or two away: In smaller spaces. HCE200B Uberheat Ceramic Heater by Honeywell, \$34.99; amazon.com.Larger SpacesThis super-sleek and thin heater from De'Longhi can stand on the floor or mounted on the wall (either way, it's definitely a space saver!). Because it's a convctor heater, it's completely quiet. If you need to warm up the room super quickly, in which case a powerful fan will switch to things going. Otherwise, just temperature and let it blend into your decor. HCX9115E Slim Style Convektor Heater by De'Longhi, \$134.99; amazon.com. This site is not available in many parts of the world, home heating is a big deal. Sometimes built-in heat sources alone aren't cut, and that's why many homeowners turn to portable space heaters. If you've done any browsing space heaters, you've probably noticed the massive range available. If you are in the market for a good heater but are not sure which type makes sense for your situation, we are here to help. Plus, here's why you shouldn't plug heaters into power strips. Types of heaters The first decision when choosing a heater is whether to buy a fuel burning or an electric unit. If you plan to heat a room in your home, not a garage or construction site, electric heaters make sense. Fuel burners are generally more powerful, but they also produce carbon monoxide. This makes them riskier than electric models unless they warm up the room with plenty of ventilation. Here are different types of electric heaters for domestic use:Infrared heatersS They use infrared bulbs to produce concentrated heat. Overall, they are better at snuggling nearby and warming hands than quickly bringing your entire living room up to 72 degrees. But some of the newer infrared claims to be powerful enough to heat space too. Like many electric heaters, most infrared devices have 1,500 watts - the maximum most standard sockets can handle. These heaters sell for \$50 to \$120 depending on size and functions. This well-reviewed Dr Infrared Heater has a built-in thermostat and remote control. Shop NowForced-Air HeatersIf you want a lot of heat for fast, forced-to-air space heaters is a good choice. They connect the heated internal element to a fan that circulates in the room around the warm air. Fans may be noisy, but newer models are quieter. Most of these heaters, including this unit of Vornado, cost between \$30 and \$100.Shop NowCeramic HeatersAs forced air appliances, ceramic space heaters work convection. They heat the inner ceramic tiles, which provide heat to the surrounding air, gradually heating the space. Ceramic stoves like this one lasko are popular because they can never get hot enough to burn anything, unlike infrared and some forced air units. Shop NowRadiant HeatersThe most electric shining space heaters work with fuel oil inside the unit, enough to warm up near the space and people. Models like this PELONIS shiny heater are good for small spaces and perfect if you want an almost noise-free heating solution. They usually sell for \$50 to \$80.Shop NowHow to choose space heater Above categories often overlap. Infrared and ceramic stoves can also be forced into the air if they have a fan, which they often do. When deciding what type to buy, your first consideration should be heating speed and power. Do you only need a little heat in a particular place, but want it quickly? Go with infrared. Are you okay with some noise, and want the heat to circulate around the big room? Call air force. Do you want to avoid fire hazards? Go to the pottery. You need a slow, persistent heat that's here? Then an oil-filled shining unit is the way to go. Here are the things you need to know using electric heaters. Trust us, it's not worth the risk. This article originally appeared on SouthernLiving.com. As we move closer to the winter months and temperatures begin to rise, experts are warning of common winter behavior that could pose a serious threat to you and your loved ones this holiday season. One Oregon fire department recently noted on Facebook that residents should never plug a space heater into an electric bar. As their photo of the charred power strip shows, the effects can be catastrophic. These units are not designed to handle the high flow gas needed for the heater and can be over-heated or even ignited due to the added power flow, the Umatilla County Fire District #1 wrote. According to the National Fire Protection Association, heaters, both portable and stationary, make up two out of every five (40%) fire and four out of five (84%) fire deaths. Half of the fatal home heater fires started because nothing was too close to the heater and caught fire. Avoid fire this winter by keeping heaters and things that can burn at least three each other, and into the socket and never into the extension cord or power bar. For more information, visit NFPA.org. This story originally appeared in Southern Life's Associated Retailers There's a refreshing chill in the air at this time of year that we can appreciate, giving time to the backgates and long runs outside the crisp air, but it's best left outside. Inside, as the temperature drops, the battle begins to stay warm. This refreshing autumn wind is always welcome after dog days in summer, but don't get used to it, folks. Winter is coming, and before you know it, temperatures are falling below your comfort zone. This is when you need one of the best heaters to make any room in comfortable and cozy temperatures through the cold weather season. Instead of cranking the thermostat, and your heating bill, we've rounded up a selection of the best heaters in the office, heaters for large rooms, even space heaters in the bathroom to keep you warm wherever you are. Save your trusty parka slopes and check out the best heaters for each budget. Advertising – Continue reading below Best Affordable Space Heater Comfort Zone Ceramic Space Heater This ceramic model is one of the cheapest heaters we found.
