Medical Textbooks Online: Mannan Regional Autopsy and Surface Anatomy 14th edition of the PDF is divided into two sections: Regional Autopsies and The Surface of the Human Body's Anatomy with 16 chapters. The sequence of autopsy steps determines which structures should be defined and clearly directs students, how and where to cut and reflect these structures. There is a big change in medical curricula, given the study of human surface anatomy in relation to various pathological conditions and situations, and it should be studied by medical students in a comprehensive, applied, relevant and contextual basis. Mannan's regional autopsy and surface anatomy provide a deep understanding of the human body. It shows the different internal structures of the human body that course under the skin, i.e. nerves, arteries, veins, etc. The purpose of this medical book is to gain greater efficiency in using the time of students in the laboratory, in preparing and reviewing the exam. A regional approach is the autopsy method described in this book. Although the anatomy is widely represented, it focuses mainly on the head, neck and face, abdomen, chest, limbs, bones, nerves and vessels of the human body. 23 Colored slabs used to visualize images of regional structures. Apps and Glossary further support readers learning the subject. Several mistakes may be made in the process of publishing the book.
