3 to the 4th power =81

The 4th power of a number is the number multiplied by itself four times. Write it with an elevated number 4 (exhibitor) next to the base number. number4 or 54 or 84 are examples of the use of an exhibitor 4. Saying 3 to power of 4 or 34 is the same as saying 3 times 3 times 3 times 3 (equivalent to 81). Saying 20 to Exhibitor 4 or 204 is the same as saying 20 x 20 x 20 x 20 (equivalent to 16,000). To find a number with a different power, use our simple exhibitor calculator. To find the number needed to find the exhibitor 4 of a number, use the 4th root. Formula - How to calculate the 4th power of a number Exposing 4 of a number is by multiplying that number by itself 4 times. number4 - number x number x number x Number To do the opposite, use our 4th root calculator. Example 14 - 1 time 1 times 1 times 1 times 1 - 1 24 - 2 x 2 x 2 x 2 - 16 34 - 3 x 3 x 3 x 3 - 81 44 - 4 times 4 times 4 times4 times 4 times 4 - 256 54 - 5 times 5 times 5 times 5 - 625 To the power of 4 Table Frequently asked Questions A number at the power of 4 is the number of times itself 4 times. 3 to the power of 4 is 3 x 3 x 3 x 3 (81). 10 to the power of 4 is 10 x 10 x 10 x 10 (10,000). Multiply the number by itself 4 times more. To type an exhibitor into a word processor, look for the superscript command (it's usually close to commands such as bold or italic). To type an exhibitor for the web, use the markup. This is an HTML tag that surrounds the exhibitor. They mean the same thing. The number itself 4 times (number x number x number x number x number x number). Sources and More Resources Copyright © 2020 Multiply Media, LLC. All rights reserved. You can put this solution on your website! Hi, this is an online calculator for exhibitors. Calculate the power of large base intability and actual numbers. You can also calculate the numbers to power of large exhibitors under 1000, negative exhibitors, and actual or decimal numbers for exhibitors. For large exhibitors, try the calculator of the major exhibitors For educational purposes, the solution is extended when the x base and exhibitor are small enough to fit the screen. In general, this feature is available when the x base is a whole to a high positive or negative figure to the power of a whole to a positive number or ln addition, when the x base is a high positive or negative double-digit integer to the power of a positive or negative integer at a figure below 7 and above -7. For example, 3 to the power of 4: '3's 3{4}') ('3'3 'cdot 3 'cdot 3 'cdot 3') ' (81 81 For example, 3 to the power of -4: '3'-4') ('dfrac{1}{3}'s '3{4}') '(dfrac{1}{3}'3 'cdot 3 'cdot 3'){1}{81} Exhibiting rating: Note that -42 and (-4)2 result in different answers: -42 - -1 -4 - 4 - 4 - 4 - -4 - -4 - -4 - -16, while (-4)2 - (-4) - (-4) - 16. If you enter a negative value for x, such as -4, this calculator assumes (-4)n. When a less sign occurs with an exponential notation, some caution is required. For example, (-4)2 means that -4 must be brought to the second power. As a result (-4)2 - (-4) - (-4) - 16. On the other hand, -42 represents the additive reverse of 42. So -42 - -16. It may be useful to think of -x2 as -1 x2 ... [1] Examples: 3 high to the power of 4 is written 34 -81. -4 high at the power of 2 is written (-4)2 - 16. -3 high at the power of 3 is written (-3)3 - -27. Note that in this case, the ansner is the same for both -33 and (-3)3 but they are always calculated differently. -33 - -1 - 3 - 3 - 3 - (-3)3 - -3 - -3 - -3 - -27. For 0 high to power 0 the answer is 1 but this is considered a definition and not a real calculation. Exhibitor rules: '(x'm 'cdot x'n ' x'm'n') '(dfrac{x-x-x-n') ') '((x-m)'n 'x'm 'cdot n') '((x 'cdot y)'m 'x'm 'cdot y' x-y- right) m -- 'dfrac{x-m-y-m)-(x-m' '-dfrac{1}{m}') -(left(dfrac x'y'right)-m -m (definition) -) (if 'y'; then 'y'sqrt[m]x' -y-frac{1}{m}') - (x-frac{m}{n}') References [1] Algebra and Trigonometry: A Functions Approach; M. L. Keedy and Marvin L. Bittinger; Addison Wesley Publishing Company; 1982, page 11. The Mathematics Forum: Exhibitors and negative numbers. For more details on the theory of exhibitors see Lois Exhibitors. To calculate fractional exhibitors, use our fractional exhibitor calculator. To calculate roots or radicals, use our root calculator. Cheryl C. asked - 04/06/16 I'm trying to rate -3 at the fourth power. What would be the answer, -81? 1 Expert Response Vinay D. Answered - 04/06/16 Software Engineer with more than 8 years of programming experience. Note that: when a minus (a number with less sign) multiplies with one minus (another number with less sign), the result is a number when positive sign. Now, solving this: -3 to the fourth power means that we multiply -3 four times. (-3) 4 - -3 - -3 - -3 - -3 Therefore, the answer is 81 and not -81. -81.
