This beautiful emotion, which is the joy is not a little more in existence, is the emotion meaning of life. The word meaning has three definitions, meaning direction and sensation. We feel joy when our lives mean something to someone, when we guide our lives according to our values and simply when we feel that we are living. We are a social kind and should feel part of a group. When we feel connected, we are filled with joy. We have a prefrontal brain that gives us our free agency that asks us to exist. Ex-ister/ stand up. Our image of happiness often rhymes with comfort. But if the latter brings pleasure, it seeks to reduce joy and even our ability to joy. Joy is the daughter of effort, concentration, attention. When we stand in, when we realize ourselves, when we succeed in achieving our goals, joy transports us. Walking in nature, jumping, running, dancing, singing, partying, all this brings joy, we will see why. We will find a stream, it is an unspeakable state, conditions of joy and its consequences. We were told not to celebrate too much for fear that we would rest on our laurels, but bliss actually invites us to go further and further, all above. Indeed, seeing a person bursting with joy after setting a goal increases the chances that we set ourselves a goal... In this book I explore the roots of joy, its expression, its physiology, its hormones, what it brings to our lives and how to awaken it. Spread information and exercises to open our field of consciousness and increase the joy in our daily lives. ©2020 Official website Isabelle Phyllosat - Author, psychotherapist and teacher - Kozman's website Change the place to find awesome listings near you!
