To root a smartphone or tablet, you don't have to be a NASA engineer or anything like that. Although it is true that in the out and down many people sound Chinese, the truth is that there are applications that manage to leave it in a simple process to enjoy all the advantages it offers to have superuser permissions for the Android device. In fact, one of the best examples is KingoRoot, an app designed to get terminal roots within a few minutes and that offers no complications: just one click. How to root Android? It used to be more complicated. Not that you need Mensa's IQ level: you had to connect your mobile phone to your computer and app with a USB cable and start the process from the desktop app. Now you can continue to do so because there is a version for Windows, but it has simplified everything with apk that you can download to do it from the smartphone itself without using the PC. Here's why: Step 1: Download the app to your device. This is enough to get the green Download button. Step 2: Install the tool and run it. Step 3: Click the button to root your mobile phone. Step 4: Wait for it to restart, and you already have: rooted device. It's one of the most powerful rooting apps with the highest success rate among the devices it works with. This is achieved because its developers update and improve the scripts it works with. As for supported brands, they are the most Android manufacturers, among them the most common: LG, Google, Sony, HTC, Samsung, Huawei, Dell, Benq ... and works with Android versions between 1.5 and 5.0. What are the advantages of rooting Android and having superuser permissions? But, of course, you need to know what it's like to be rooted and it's nothing more than full access to the system to make the corresponding changes to the operating system. This is allowed without a problem because Android is a free and open source system, but there are manufacturers that offer their own layer of customization, so you can end the warranty. The advantages are that you get full control over the device, which is able to install custom ROM (so-called custom ROM), remove blissful bloatware, which are applications that come installed as standard and make full archives through tools like Titanium Backup. Well, all this except to be able to use an application that can only be used on released devices in addition to better control of device performance. As there are security issues, some updates may be you can lose the warranty... Guarantee...
