On Monday (12) we began to see the first fruits of this partnership, with the arrival of Amazon's streaming service - Prime Video - on Chromecast and some Android TV devices. Some, because, as 9to5Google was able to confirm, in the case of Android TV, the presence of the download app, as well as its updates, will work in the same form of Android update for smartphones: everything will depend on the release of updates through the company that the device manufacturer. In the case of the Play Store, the app is already available and all of its management will run through the Google store, just like the overall mobile app. The Boys series, produced and aired by Amazon Prime Video, is one of the most popular services: the streaming platform is available through the Play Store and Android TV, but the latter, with reservations (Image: Disclosure / Amazon Prime Video) The reason for Amazon to follow this model specifically since Android TV has not been disclosed, but the site suggests that it has something to do with licensing issues. Currently, only HiSense TVs already have Prime Video on their download services - a user showed it on Reddit. The good news is that the Android TV ecosystem is expanding: according to the Statista website, 10% of the smart TVs sold in 2018 came with an installed operating system. This should take some time, but it is likely that the Amazon video app will appear on all devices eventually. Source: 9to5Google; Statista liked this story? Subscribe to Canaltech for daily updates with the latest news from the tech world. The non-aggression pact between Google and Amazon, which has released streaming content from each other's devices and vice versa, does not include Prime Video and Android TV relationships in the game: for various reasons, devices running the system and which do not have native access to the app only after manufacturers update their respective products. An agreement between Google and Amazon allowed the Prime Video app to finally become compatible with Chromecast, thereby allowing streaming of its exclusive programs in Mountain View Key and compatible devices, while on the other side, YouTube was released to be installed native to the e-commerce giant's telecoses such as fire TV Stick. The hysteria between the two companies continued and it was for a simple reason: one did not want to promote the other's products. Amazon has long been selling Chromecasts as a way not to hurt sales of its devices, while Google has very rarely allowed Prime Video to be released on Android TV TVs, more by the power of (large) manufacturers who demanded access to the platform. Not all TVs have access to the app. Only with third-party TV teams, things were very different: Amazon noted everything as incompatible with the exception of one, Shield TV, the only one with native app support due to an agreement between Jeff Bezos's store and nVidia. For everyone else, just with a sideloading game app for that phone or nothing done. nVidia Shield TV: Excluding the end of hostilities between Google and Amazon, everyone believed that just as happened with Chromecast, all Android TV devices would come to support Prime Video, but instead© of this both companies went into silent mode. To clear this story, the site 9to5Google decided to go for information and found that yes, there is a plan ready to solve this problem, but it depends on the third factor: manufacturers. According to sources close to, Google will release updates to the app directly through the Play Store, but the installation was related to the OTA update, which © the responsibility of OEM-producer partners. Thus, Prime Video will be part of the list of native programs and users will not have how to install it through the app store. While this is an option, it doesn't © that Google is challenging something that should be very simple, just let go of the Play Store download and that's it. Throw the Shell Bomb Android update at the top of the manufacturers© always the worst option, since they can just choose not to release anything and do so only in the next version of the product. So © at the moment, China Hisense I© the only one that has released an OTA update for the H8F line TVs; it remains to be seen whether other companies that make TVs and TV sets will do the same, on the other hand, the solution will still sideloading. With information: 9to5Google. View all images of customers Best reviews Latest reviews View all 4K big screen TV reviews are slowly going down in price and are now available to most buyers. As a result, the appetite for 4K movies and TV shows is stronger than ever, including from streaming services such as Amazon Prime Video.Read more: What's new on Amazon PrimeWhether you have access through the smart TV platform, TV stick, or TV boxing, new subscribers of Amazon Prime Video service who also own 4K TVs I wonder what kind of 4K content, if any, is available for streaming on their TVs. Fortunately, the short answer is yes: Amazon Prime Video really supports 4K movies and shows. It's not a complete story, however, so below we'll look further into what 4K content Netflix competitor Amazon has to offer. Subscribe to Amazon Prime VideoHow to watch 4K UHD and HDR content on Amazon Prime VideoThe Grand Tour on Amazon Prime Videoff you subscribe to Amazon Primelf, you can stream various movies and shows in 4K, as well as almost all the original creations of the service. This means that if you have the support of 4K TV, you can stream Amazon Prime original shows such as Tom Clancy's Jack Ryan, Grand Tour, The Man in the High Castle, Space, and more in the 2160p resolution. Almost all of Amazon's original Prime Video shows also support High Dynamic Range (HDR) features, which should give them a wider range of colors, along with better contrast. Amazon Prime Video's 4K movie and TV shows support for three HDR standards. One is only the basic HDR standard, and the other uses those created by Dolby Labs, and shows that support for this standard will be labeled as Dolby Vision. Another standard is HDR10, and shows that use it will be flagged as such. In addition to all the thousands of movies and TV episodes on Amazon Prime Video that are available with an Amazon Prime subscription (some of which are compatible with 4K), the service also offers movies and TV shows for rent or purchase. A growing number of these movies and shows are now available in 4K UHD resolution. You can expect to pay more for renting or buying these movies and shows in 4K, compared to their HD and SD versions. What download speeds are needed on the Internet? Officially, the company says you'll need an internet connection of at least 15 Mbps to download the speed streaming Amazon Prime Video content in 4K resolution. While these are some pretty high requirements from Amazon, keep in mind that Netflix's download speed requirements for its 4K video are even higher in 25Mbps.Do I need to purchase a more expensive streaming plan? Unlike Netflix, which forces its customers to pay more to access supported video in 4K resolution, Amazon Prime Video is a one price fit for everyone business plan. In other words, when you sign up for Amazon Prime, either through a main service or with a standalone video plan, you get access to its video with all its permissions, including 4K, at no extra cost. Again, this is only for movies and TV series subscriptiond to Amazon Prime Video; Videos that you have to rent or buy directly on the service can still have a higher price if you want to watch them in 4K. Which devices support Amazon Prime 4K? Smart TVs with 4K and HDRAmazon support page shows that officially, all Ultra HD HD Sony, Samsung and LG TVs, made in 2015, and then can support streaming 4K video from Amazon Prime Video. In addition, HDR support from the service is supported by some Samsung SUHD TVs from 2015 or later, as well as some LG OLED and Super UHD TVs from 2015 or later, as well as all Sony Ultra HD TVs from 2015 or later. In addition, 4K UHD support is available on supported Phillips, Visio, Sharp, Grundig, JVC, TCL, Skyworth, AOC, Changhong, Haier, Hisense, Panasonic, and Vestel 4K TVs. This includes smart TVs from those companies that use Amazon's own Wasp Fire TV or Roku OS. Panasonic Blu-ray players from 2016 or after also support 4K streaming. Gaming consoles supported by Microsoft's 4KBoth Xbox One S and Xbox One X gaming consoles support streaming supported movies and TV shows on Amazon Prime Video in 4K resolution. The same goes for fire TV Cube TV. Other sticks and TV suits that support Amazon Prime Video in 4K include Google Chromecast Ultra, Roku Streaming Stick Plus, Roku Ultra, Apple TV 4K and Nvidia Shield TV. Smartphones and 4K-enabled smartphones and tablets currently support 4K streaming for some movies and TV shows. Of course, your phone or tablet should also support 4K resolutions, and for that to work. The iOS version of the app does not currently support this kind of permission. Do desktop and laptop PCs support 4K UHD streaming for Amazon Prime Video? Whether you're streaming movies and TV shows from Amazon Prime Video to Windows, Mac, or Linux laptop or laptop, or even on your Chromebook, the bad news is that you can't stream supported 4K video in this high resolution. Because of the copyright restrictions for these platforms, the highest resolution you can get for these HD devices. Hd. vu premium android 4k tv amazon prime video. amazon prime video 4k android tv
