Teachers from auburn University's College of Veterinary Medicine published a third guide to anatomy in a series of four books detailing equestrian anatomy. The book is called Horse Anatomy Guide: Head and Neck, Illustrated Guide. The author of the book is Dr. Mahmoud Mansour, Professor of the Department of Anatomy, Physiology and Pharmacology, who is also the coordinator of a large section of gross animal anatomy. Dr. Janet Stais, Professor Emerita, edited the book and compiled the book online for a private publication. Dr. Paul Rumf, Professor Emeritus, is the author of a chapter covering teeth, blood vessels and nerves. Dr. Dewey Ray Wilhite, coordinator of the Gross Anatomy Laboratory, contributed to the autopsy and imaging throughout the book. Past manuals on the anatomy of horses contained only black and white images, and Dr. Mansour developed the style of his guides to include colorful, detailed illustrations to help students understand the anatomy of horses more effectively. This is the third book in a series of books on equestrian anatomy. The first two books covered the forelimb and the hind limb, respectively. This book on the head and neck contains 142 illustrations on 90 pages. This book is a guide to autopsy for veterinary students, but will also be useful for practicing veterinarians in mixed and large animal practice and clients for visualization. This series of guides is available in all veterinary libraries around the world, and Dr. Mansour hopes that it will become a new standard of equestrian anatomy guide. The fourth and final book on horse body cavity will be published at the end of next year. When finished, four books will cover the anatomy of the entire horse. Several veterinarians have contributed to the book's success, including Dr. Carol Akers, of Junction, Texas, for many photos on his teeth; Dr. Fred Caldwell, horse veterinarian in Auburn for endoscopy images; and Dr. Philip Garrett, a retired professor of Auburn anatomy, for dental illustrations. For more information about the book, visit . For more information about the previous book in the series, visit . Other Title: Head and Neck Publication: Auburn, Alabama : College of Veterinary Medicine, Auburn University, 2016 Format/Description: Book89 Pages: Color Illustrations; 25 cm Subjects: Horses -- Anatomy. Horses - Autopsy. Veterinary anatomy. Auburn University College of Veterinary Medicine has you covered! Their university professors recently published two guides, called the Horse Anatomy Guide: Head and Neck, An Illustrated Guide and Guide to Ruminant Anatomy: Autopsy and Clinical Aspects. While books primarily for veterinary students, horses and large animal vets will find full-color illustrated guidance on learning autopsies useful in their practice. According to the website of the College of Veterinary Medicine of auburn University: Guide to the anatomy of horses: Head and Neck, the illustrated guide is authored by Dr. Mahmoud Mansour, Professor of The Department of Anatomy, Physiology and Pharmacology, who is also the coordinator of a large section of gross animal anatomy. Dr. Janet Stais, Professor Emerita, edited the book and compiled it online for a private publication. Dr. Paul Rumf, Professor Emeritus, is the author of a chapter covering teeth, blood vessels and nerves. Dr. Dewey 'Ray' Wilhite, Coordinator of the Gross Anatomy Laboratory, contributed to the autopsy and imaging throughout the book. A guide to ruminant anatomy: Autopsy and Clinical Aspects is authored by Dr. Mansour, Dr. Wilhite and Anatomy Instructor Dr. Joe Rowe. The equestrian guide is the third book, of the four planned for horse anatomy. It is also in full color, which can help first-year veterinary students better understand the anatomy of horses, according to the university. The fourth book, The Equestrian Anatomy Guide: Body Cavity, will be published in September. Books are available through John Wiley and Sons Inc. Inc.
