2Model-based support solution to mimic a person's pancreas with a nurse in a cycle, but eventually automated. Measurements and other data are given to a decision support system that identifies information intended for specific patients, such as insulin sensitivity, to personalize the model. The Monitoring Protocol uses this data to create personalized patient care recommendations. Change the support of model-based solutions with a clinical protocol and you'll have standard care glycemic control in icu guideline. glycemic control in icu ppt. glycemic control in icu patients. glycemic control in icu pdf
