Beeman p11 pellet pistol

The Beeman P1 (Weihrauch HW45) is the most famous gun Beeman made in collaboration with Weihrauch. Dr. Beeman is responsible for the styling and design of high-level pistols (top lever, spring piston) and Weihrauch for putting on finishing touches and producing handguns. After P1, several variations have been developed: the Beeman P1/Weihrauch HW45 stainless look - this one is similar to the P1, except for the lower part is silver stainless steel Beeman P11 / Weihrauch HW45 silver star - it is like a stainless-looking version, but with a sculpted wooden handle replacing the Colt 1911 squeeze - this is the model on which this review of the Weihrauch HW45 black star is based - I haven't seen this model from Beeman - this one has a sculpted wood grip but no stainless look, so it's more reminiscent of P1 There shouldn't be much difference between these models except in aspects of stainless/clinging. I liked the stainless steel aspect and also liked the shaped grip more than the one in 1911, so I decided to get the P11 over P1 and P1 stainless. The formatted P11 squeeze is also shared with the pneumatic version - the Beeman P2/Weihrauch HW75. The story goes that when Dr. Beeman designed P1, he didn't make it clear the scheme wanted a spring plunger, so Weihrauch put on a pneumatic and that's how P2 was born. I've been thinking about P2, too, but since I already have a Beeman P3, I went for a spring piston model. Operation Unlike most other spring pistons that work with the breaking pipe mechanism, the Beeman P11 uses the upper lever mechanism. Furthermore, this mechanism compresses the spring towards the front of the gun, so when it is released, it will return, like a requisiment firearm. That's the aspect I was most interested in, because my IZH 53M front kick was pretty weird. This aspect also means that the upper lever works a little differently than on the pneumatic piston; on the pneumatic piston, the upper lever is easily opened, and then an effort is needed to close, because then the pump is compressed; on P11, effort must be made when opening the lever, because this is an action that compresses the spring - closing the lever back is easy. So, the P11 works like this: release the top lever by pulling on the hammer, then grab the lever (it has smooth edges and grooves that allow comfortable grip) and drag it to 80 degrees for low power or at about 150 degrees for full power put the ball in the breech press the lever back until you hear it lock in place - I pull the hammer during this section, To prevent unnecessary rubbing with the lock lever Keep a hint that the safety on the P11 is manual, unlike on pneumatic guns like P3, which is automatically installed when closing the lever. So you should set it up before this operation. Works by blocking trigger surgery. Package and build Like P3, P11 came in a generic Beeman cardboard box, in addition to this time the manual is included. This gun deserves a much better package. Webley Alecto shames that. I had to order a special case and I went on a small SRC tactical gun case, not the usual little Plano case model I've ordered in the past. When it came, it looked like it would be too small to hold the P11, but it actually fits very well (with very little room to spare) in a flat position (I keep the P3 at an angle inside the Plano case). I like the heart case over Plano one because it locks up better and feels tighter. The P11 is fully built of metal. There's no plastic. The metal finish is excellent. The black anodized tip is smooth and clean very easy. The lower part of the stainless part has little texture and is more resistant to fingerprints - this is why I wanted a stainless model. The safety lever and trigger are also made of black metal. It all seems very good together. Wood timber is the only non-metallic metal and that's the beauty of it. His shape is excellent and makes him very comfortable to hold a gun despite his hefta. The upper part as well as the grip base are laminated and very beautiful to the touch, while the rest has this irregular non-slip finish that I have never seen before. It looks and feels like a piece of high quality. The adjustable Rear Sight's settings can be adjusted for elevation and winding via two straight screws. The strength of the trigger spring can also be adjusted with a 2mm Allen key (not included) - there is a hole in the trigger through which this can be inserted to get the trigger adjusted. This is explained in the manual. I haven't made any adjustment yet - the default settings worked perfectly for me. This is actually the first gun I haven't made any vision adjustments to. The performance of The Beeman P11 is very accurate. I'm already getting results just as well as any other air pistol in my collection and I think there's still room for improvement. The low-power setting works great for targeting - drills clean holes in the paper. I tried high power setting several times and my goal got seriously off - it looks like the sights need to be adjusted when used in this way. The difference in efforts needed to compress the spring to two levels of strength does not seem very high. In fact, the effort required is quite reasonable given the power gained. P11 requires less effort to use than P3. The P11 is also pretty quiet. Mostly I hear the thunk of spring and the impact on the target trap, but there is no loud pop from compressed air. The fact that spring is moving backwards rather than forwards seems to make a significant difference in control and accuracy - I was hoping for that and my They met. The conclusion of The Beeman P11 is a beautifully crafted air rifle. The quality of workmanship is excellent, using high-quality materials. Operation and handling are very nice and its accuracy is superior. This is one of the best spring airgun plungers available on the market. I just wish it was sold with a custom case. Power: 2 settings To edit this page, simply log in to Control Panel, click the Site Contents tab, and select the View Web Pages option. Click Edit next to delivery and return page and you can change this text. The sample return rules below are displayed, which you can edit as needed. Return policies You can return most new, unopened items within 30 days of delivery for a full refund. We will also pay the cost of return delivery if the refund is the result of our error (you received the wrong or defective item, etc.). You should expect to receive a refund within four weeks of giving the package to the return ship, however, in many cases you will get a refund faster. This time period includes the transit time to receive your return from the shipper (5 to 10 business days), the time it takes to process your return after receiving it (3 to 5 business days) and the time it takes your bank to process our return request (5 to 10 business days). If you need to return an item, simply log in to your account, review the order using the Full Orders to My account and Return Item(s) button. We will notify you via email about the refund once we have received and processed the returned item. Delivery We can send to almost any address in the world. Note that there are restrictions on some products, and some products cannot be shipped to international destinations. When you place an order, we'll evaluate delivery and delivery dates for you based on the availability of your items and the delivery options you choose. Depending on the delivery service provider you choose, delivery date estimates may appear on the shipping offer page. Also, for example, shipping prices for many of the items we sell are weight-based. The weight of any such item can be found on its details page. To reflect the policies of the shipping companies we use, all the adhesions will be rounded off to the next full pound. Pound.
