The innovative Combi-CB is the original multi-way counterbalance forklift truck. More compact than a conventional forklift the Combi-CB is ideal for transporting goods such as palletized cargoes, but has the added benefit of the ability to transfer long loads down sideways. The diminutive stature combined with the forklift manoeuvrability makes the Combi-CB the perfect all-round fork with the ability to transport a very diverse range of goods, From palletized loads to long length materials such as wood or steel beams, Its low profile and compact design enables the Combi-CB to load HGVs and bring goods to racking or lines The Combi-CB is also small enough to import containers for filling or de-filling. Another advantage of the Combi-CB's innovative 4-way steering and compact design is that it provides you with the versatility to operate it as a narrow aisle forklift. Small and fast with unmatched versatility, the Combi-CB multi-way counterbalance forklift will ensure maximum gains in productivity. The initial investment will be returned quickly on the substantial savings on operating costs. A confident operator is a productive one and the Combi-CB is designed with this in mind.
