In Pokemon Masters EX, you will explore the artificial island of Pacio, teamed up with famous trainers to compete in 3-on-3 battles that take place in real time as you work towards becoming the champion of the Pokemon League (PML) tournament. At Pasio, every trainer pairs with one trusted Pokemon at a time, this partnership is known as a pair synchronization, and this is the basis of your team of Pokemon Masters EX. Creating a diverse roster of synchronizing couples, developing their skills, and pairing them in teams that emphasize their strengths are the key to success in your journey. You will need to pull out all the stops to help your synchronizing pairs become powerful enough to take on tough enemies like the ones you find in Battle Villa, Legendary Arena, or Champion Stadium. We will break down the qualities that make each synchronous pair unique, and teach you how to get the most out of each one. Pokemon Masters EX is now available for download in the App Store (iOS) and Google Play (Android). Sync Pair Basics Each pair of synchronization has several qualities that never change. They know a unique set of four moves, possess one to three passive skills (think abilities in Pokemon RPG), have one type of Pokemon that determines the type of their powerful synchronization course, and have one type of Pokemon weakness that they will take extra damage from. Each synchronized pair also has a role to play - strike, support or technology. Strike synchronization pairs tend to have a higher attack or Sp. Atk, but lower HP support synchronization pairs are at the opposite end of the spectrum - they usually have higher HP, have lower attacking stats, and learn movements that restore HP or increase the stats of their teammates. Pairing synchronization technologies tends to focus more on the impact of the battle indirectly with tricky tactics such as applying status conditions. Each synchronized pair also has a level and six statistics: HP, Attack, Defense, Sp. Atk, Sp. Def and Speed. The stats function in the same way as they do in other Pokemon games. HP represents how much damage a synchronized pair can do; Attack determines the strength of physical movements that can be protected from defense; Sp. Atk and Sp. Def are similar to attack and defense, but for special moves; And the speed affects the speed the sensor fills. You can increase the pair's synchronization level by giving them a level guide or winning battles while they are in your team. Every time a pair of levels are clocked up, their stats increase. In addition to gaining experience, pair synchronization can also become more powerful through five more complex Increase their cap level, increase their potential or ★s, increase their level of movement in order to strengthen their moves, activate tiles on their grid synchronization to improve their stats and capabilities, and teach them lucky craftsmanship. By increasing the level of pair synchronization and cap level you can align your synchronization pairs to their initial cover level once you scout them, but do do Even more powerful you need to increase their level cover. You will need to invest some items every time you do this, and the items you need will vary depending on the role of the synchronization pair that you amplifies. At the beginning of the main story, you will get special area information for the training area. The items that you need to increase the level of caps of your synchronization pairs can be obtained in the Cap-Unlock area of the training zone. But keep in mind, fights here are recommended to synchronize pairs that already lv. 100. Lv. 110, or even Lv. 120, respectively! To unlock Lv. 125, you'll need a few additional items that can only be obtained in Cap-Unlock Area 2. Once you've received the necessary items, you can increase the lid level of your synchronization pair by clicking the Sync Pairs button in the Pokemon Center and then selecting the unlock level cover. Once the sync level cover is unlocked, you can align the synchronized pair like you did before. The training area is an excellent source of alignment guides to make it faster. In addition, level guides and elements are often available during events to increase the limits of steam synchronization. Maximizing the potential of synchronized pairs Each synchronized pair has the initial potential denoted by its ★. Synchronization pairs get stats as their potential increases. The potential of pair synchronization will never increase by itself, but you can increase it with rare batteries. You will need to give the synchronized pair twenty-3★ Power-Ups to increase their potential from 3★ to 4★ and then twenty★ power-ups to further increase their capacity from 4★ to 5★. You can also increase the power of 5★ synchronize pairs, giving them up to twenty-five★ Power-Ups, but they won't be immediately upgraded to 6★ when you do. If the synchronization pair in question is unlocked★ you'll need to use Champion Spirits to increase your potential to 6★ EX and get ex Style and power synchronization. Each time you increase the potential of synchronizing a pair, their stats will increase even if they don't reach another ★. The most common means of getting items of power is reconnaissance of the pair's synchronization, which has already joined your team and already has its own level of movement maxed out, but power items are often also available through events. You can also exchange general bonuses for rarer bonuses in the Exchange Items section of the Store Menu. Improving the level of movement of sync Pairs One of the most effective ways to improve the performance of pair synchronization is to increase their level of movement - a number that ranges from 1/5 to a maximum of 5/5 in the section Sync Pair menu move level. Each time the level of movement of your synchronization pair increases, their attack and synchronization move will have more harm. You'll also need to increase the level of movement of most synchronization pairs to get the most out of the grid synchronization (more on that at the moment). The most common means of increasing synchronization the travel level by scouting that same pair of syncs again joined your team. You'll probably find that it's pretty easy to increase the level of movement of common 3★ synchronized pairs, while less rarely 5★ synchronized pairs can be very difficult to power if you scout them repeatedly while they're featured in Spotlight Scout or Pok e Fair Scout. Synchronizing pairs that join your team during a story can't be scouted in a store, but sometimes you'll be able to increase the level of movement of such synchronization pairs during events. Another way to increase the movement of synchronization pairs is to use extremely rare elements of candy motion, which are sometimes available during events. There is a different element for each role and initial potential. If your red and Charizard had a 2/5 travel level, giving them a 5★ Strike Move Candy would increase their travel level to 3/5. Note that this is the initial vapor synchronization potential that determines what move candies use to increase their travel level-Skyla and Swanna, which started at 3★ for example, will still use 3★ Support Move Candy to increase their level of movement, even if you increased their potential to 5★. Improving pair synchronization with Sync Grid is the most involved and effective method of increasing the power of pair synchronization through their synchronous grid. Each synchronized pair can get at least some increasing stats through their grid synchronization, but it's the synchronization of pairs with extended grid synchronization that shine brightest. Most newly released synchronization pairs have expanded the synchronization grid, while old synchronization pairs have gradually expanded their synchronized grids through events. Some particularly powerful tiles on the extended synchronous grids of certain synchronization pairs are locked until the synchronization pair move level is increased to 2/5 or 3/5. In order to activate the tiles on the grid synchronization, you will need to spend synchronizing the balls that you can get from synchronizing the Orb area of the training area as well as from most events. Before you can spend synchronized balls, you need to convert them into synchronized balls that are specific to the nature you enhance. The grid synchronization of each pair of synchronization is different, but on each grid of synchronization you will find powerful bonuses such as stats increases, increased power movements, MP Refresh effects (which sometimes allow you to use moves with limited use more times in combat), and passive effects that cause on certain combat conditions. A fully developed synchronous grid significantly increases the pair synchronization power. All the necessary synchronization balls is a great investment, but it's a great way to ensure your favorite pair of synchronization can take on tough enemies! Teaching Sync Pairs Lucky Skills Winning battles in Battle Villa sometimes rewards lucky scrolls and happy cookies. These elements are the key to learning your pair synchronization lucky skills, which are essentially additional passive skills with different effects. Each synchronized pair can only have one lucky skill. To teach a synchronous couple a happy skill, you need to Your pair of synchronized lucky scrolls to unlock their lucky skill slot (synchronizing pairs with higher initial potential will require more lucky scrolls than those that start with lower initial potential). Once you sync a pair of lucky skill slot unlocked, you can give them a lucky cookie, with which they will get the occasional lucky skill based on the type of cookies you gave them. There are four types of happy cookies, each associated with different kinds of happy skills. Crispy Lucky Cookies will teach your synchronized couples happy skills, mostly related to attack. Creamy Lucky Cookies will help against stat-reducing effects. Crispy Lucky Cookies counter status conditions and some other conditions. Finally, Chewy Lucky Cookies are taught good skills that protect synchronized pairs from attacks of a certain type. The luckiest cookies also have a rarity, with three★ lucky cookies having a greater chance of rewarding a higher level of skill. The evolution of Pokemon into Pokemon Wizard EX Some pair of synchronization can get a little power boost through evolution! The evolution of Pokemon doesn't get much stat boost in Pokemon Masters EX that they do in most other Pokemon games, but if Pokemon can evolve, you need to fully develop it to maximize the power of its synchronization move. The first pairs of synchronization with Pokemon you can help evolve will probably be the ones with the first Pokemon partner from past pairs-syncing games such as Barry and Piplup and Rose s Snivy, for example. Each of these synchronization pairs should be at least Lv. 30 evolve for the first time, at which point you will get information about the area associated with their evolution. You will also need evolutionary materials that you can earn in the field of evolutionary material in the field of learning. If you have the necessary items, you will need to complete a special pair synchronization battle story just for this pair synchronization. But get ready for a tough fight if you run into battle the moment your pair of synchronization reaches the minimum level required-opponents in these fights with no pushovers! If you win the battle, however, the Pokemon in your synchronized pair will evolve. Raising Pokemon from Eggs If you want to have the food hatched Pokemon paired with the main character, it is important to note that many of the normal methods either won't work or work differently. You can't scout eggs, hatched Pokemon don't have a grid sync, and since the eggs hatch only on 1★, you'll have to do some extra work ahead. Bring their stats to the same level as the synchronization of the pairs you scout. Hatched Pokemon also has what's called affinity - an exclusive means of improving their stats that works similarly to potential. There are only three 20-point affinity levels that can be increased by letting hatched Pokemon relate to items such as Berry Tarts. Also exclusive for Pokemon 1★ and 2★ Power-Up Items; You'll need 20 of each to raise hatched Pokemon to 3★ so they can use the same batteries as other synchronization pairs. In order to increase the level of movement of hatched Pokemon, you will need to give it an egg move candy. While hatched Pokemon don't have a synchronized grid, they can learn luck skills like any other synchronization pair. Showing Thoughts There's a lot to learn to synchronize pairs and fight on Pacio, but you quickly get the hang of making your pair synchronization stronger and stronger. In addition to improving the strength of your registry, there are a few other things to keep in mind as you start. Be sure to log in every day to get log in bonuses and complete daily missions that

will clean you up with some simple items and gems. You can also do a limited number of training area battles each day, so don't forget about them. You can never get enough sync balls! Each synchronized pair has a history of pairing, which gives you some background about your new allies. They're a lot of fun and you get some light rewards for completing them, too. This is also where to go to develop your Pokemon. Finally, it's a good stretch goal to work towards getting gears from EX Plaza cooperative battles to increase your team's stats in combat. EX Plaza co-op battles sometimes reward as 1★ and 2★ gears of each type, which you can power with additional copies of the same gear and specific items such as thread and fabric. Full set lv. 15 2★ gear will provide 50 HP, 40 Attack and 40 Sp. Atk to synchronize pairs of the right type; These additional statistics can be enough momentum to survive a powerful attack or defeat opposing synchronization pairs before they can start synchronizing the move. Try to start by getting a full set of gears that matches the type of one of your favorite strike synchronization pairs. Enjoy your journey to the Pokemon Masters League tournament, trainers! Have fun and check back soon [Pokemon.com/Strategy](#) for more information about Pokemon Masters EX and other Pokemon video games. Games. pokemon master dex challenge guide
