They use Yamaha Corporation Vocaloid 2 and Vocaloid 2 and Vocaloid 3 and Vocaloid 4 singing fusion technology. Their voices were selected by Asami Shimoda. They performed concerts on stage as animated hologram projections. Their names come from the concept of left and right, as do stereo audio. Their names came from the Japanese words Mirror (鏡, Kagami) and sound (民, no) and they are each other's mirror image. Development Rin & Stereo audio. Their voices were created by taking vocal examples from voice actress Asami Shimoda in a controlled pitch and tone. They were the second edition of the Character Vocal Series, which includes vocals hatsune Miku and Megurine Luka. Rin was the first of Kagamines to be illustrated and Len was done to match her, following the Crypton concept. [1] They got mixed producer results because, compared to Hatsune Miku, they were considered much more difficult to use vocals. Asami Shimoda noted that she often received comments from Vocaloid fans that Rin's voice echoes over her head and makes them feel dizzy, while Len's higher ranges were not favorable to those who didn't like the couple at all. Despite the fact that Vy2's language development was released as masculine, Ryuto or Len's vocals were not classified as masculine vocals and were therefore not considered capable of having small masculine tones. Therefore, he and Ryuto were not indicated for development. [3] Additional software Due to numerous complaints and problems with the original vocals, it has been replaced by an ACT2 package. This package worked independently of the original package. [4] It dealt with issues related to their ability to express their integrity clearly. People who purchased the old version were able to claim an updated disc until September 20, 2008. Len Append was released by Rin & Rin V4X was released for the vocaloid 4 update. This package contains six Japanese vocals, three Rin and three Len. They are updates to the old supplement vocals from Vocaloid2. Rin's vocals are Power E.V.E.C., Warm and Sweet, while Len's are Power E.V.E.C., Cold and Serious. Enhanced Voice Expression Control (E.V.E.C.) is a new system developed by Piapro Studios that makes subtle changes to how phonetic sounds sound. There are two variants of E.V.E.C. vocals: Power and Soft. All Rin and Len vocals can use the new cross-synthesis (XSY) system developed by Vocaloid4, although there is only that to be able to do so with other vocals assigned to them by the character Rin or Len. Rin and Len each received English vocals, which were released on the same day as Japanese vocals. These vocals are separately downloaded or as a bundle with Japanese vocals. Marketing of 20,000 copies was sold in the original release. The Kagamine append package was released and went straight to fifth place in December 2010, the date of their release. [8] Characteristics of development at the time kryptons initial concept was made by a couple of female and male vocals. The first idea of this concept was two voices of the opposite sex. Crypton Future Media intended to distribute them as twins, but this idea was not accepted and their relationship remained unconfirmed. [9] After seeing many works that portray their relationship differently, Crypton announced in an interview with Crypton magazine that they would fit their ideal. Crypton's final announcement was they are neither siblings nor lovers. They were portrayed as twins in popular songs as they were portrayed as lovers of popular songs. Examples of this include a story of evil by Mothy, where they are portrayed as twins, as well as Feathers Throughout seasons by Hitoshizuku-P x Yama, where they are portrayed as a married couple. Both of them were included in the official media; The story of evil was featured in Mikupa 2011 Saporo and feathers throughout the seasons were featured in the Miku Symphony 2018-2019. Commodity companies such as Goodsmile will use the twin to describe the symbols of some products or will not use a descriptor in other products. [10] [11] Krypton's official website publishes two powerful and charming two vocals. The link is vocal however, not the characters themselves. During vocaloid 2 supplement production, Wataru Sasaki described them as having one soul between the two of them. has only one included in the joint, POWER. For their accessories Wataru wanted them to have a sense of transparency was related to their hearts. [14] V4x designs rin was granted it seems to make her look more refreshing. [15] The design was also based more on the EOS B700 rather than on Kx5 because it has a more whiter look. In addition, more synthesizers were used for the main musical characters.
