This is the case of Matepad Pro, a high-end tablet that should be comfortable in professional use like this for leisure. And, by the way, overshadow the competition (iPad Pro and Galaxy Tab S6). Okay, but what does it look like in real life? 2 months ago Android Tablet 5 1 2 1 5 December 2019 at 07:09:47 Surmesmorts wrote: December 17, 2019 at 23:43:28 TheVroden wrote: 17 Dec 2019 at 22:33:33 Surmesmorts wrote: S5e will be infinitely better if it is for multimedia, the screen is perfect and Amoled, 4 speakers The quality I have is one and it is really excellent considering its price. On this account so much to stay on the smartphone, so it is not suitable. Once I do not know the needs of the author. Objectively, I will use my browser 90% of the time, next to word processing, some movies/series and no games (no time for that). I tested the S5e, S6 and iPad Air at Fnac. I believe the benefits of iPad OS on Android, I can't feel them, so my use will be basic. The Samsung One UI has its several optimized applications and that's more than enough for me. Also, I have a Netflix account and I download a lot of movies or TV series, I confess that the movie demo on the iPad was really not convincing. Getting used to watching my videos on PCs, switching to a 4:3 format made me all ridiculously nothing wrong on Samsung tablets on the other hand. Where can I get in the long run I think. The iPad you're buying now and you have a follow-up to follow for a few years. Not sure what Samsung is as clean about it... After that is really helpful, I don't know.
