Simonton daylight max reviews

Hi! I'm getting closer to having to make a decision about my window purchase: the two brands between which I'm puzzling are the Simonton Daylight Max and the Milgard Styleline - I just read both reviews and they look very similar - and that's my problem! Milgard's representative says Milgard is of better quality and Simonton's representative says his are of better quality.... both representatives work for what appear to be great, local businesses - both have been in business for years and both have great reviews on a number of different websites (Angie's list, BBB, Yelp, etc). I can't find any website that really sets the specific specifications in these two windows so you can get a definitive answer on which one might be better. My Simonton date was 11K for 20 windows and milgard's date was 13K for the same 20 windows. I just don't know how to make my decision.... any help is appreciated! Thank you! Kelly - Owner - January, 2018 Website Editor's Answer Kelly, I think both windows are pretty close in terms of quality and features. I am very happy to hear that both installers have a good reputation and have been around for a long time. I suggest you do one of the things - either go with the Simonton Daylight Max and save yourself \$2K or go to Milgard's rep and tell him he'll sign that day if he updates you in Tuscany for the \$13K he quoted in the style line. I like Tuscany more than the style line or the natural light max. You could also go to Simonton's rep (if you want to go with them) and tell them that you have another \$10K offer from a local vinyl window company (just stay vague) and if it can match that price, you'll go with them. It's worth trying to save some money and see what your fund is... Editor John M. - January, 2018 Kelly's Reply Hi John, WOW - thanks for the very helpful response!!! Before receiving his email, I had actually booked a third company to go out to my house because it sells both Milgard and Simonton and they would bring samples from the windows. What a difference it makes being able to actually see the windows side by side! I have no idea why every windows company doesn't do this. The seller was actually the most helpful of the three and explained to me the differences and showed me how they would be put in and what it would look like from inside and outside my house. After his presentation, I'm actually leaning towards the Simonton, so it's nice to see that was one of his suggestions! I'm just waiting for your date to see if it's cheaper or more expensive than Simonton's other representative. Thanks for mentioning trying to lower the price a little, worth a try! I really appreciate your answer and advice on this - it's scary to spend so much money and I just hope you're making the right choice! Thank you!!! Kelly Kelly Owner - January, 2018 Replacement Window Reviews - Company: Simonton Daylight Max Simonton Daylight Max Windows Reviews Read 4 Simonton Daylight Max Windows review of homeowners and our site editors in this narrow framed vinyl replacement window. Read all our comments from the Simonton window. Have a question for our site editors, Dane and Tim? Send them an email and let them answer your project-specific questions. Be sure to include your email address so they can go back to you directly (we never use or sell your email, we promise.) Please note that our website is not affiliated with this window manufacturer. Additional comments: Simonton Windows Cost [ASURE] Reviews for Simonton Series Simonton Daylight Max vs Amerimax Craftsman Portrait You have a great site! It's been very helpful to me. I'm deciding between two companies: one that uses several different providers and one that uses Simonton Daylight Max. Both have been highly recommended to me by neighbors and have great reviews on online sites for long-term installation and service. If I use the first company, I would like to get the Amerimax Craftsman Portrait series. Right now the company is getting the best deals from Anlin and Amerimax: the Amerimax looks more attractive to me, and they say it's a better product they can sell now for even less than Anlin. What confuses me most is that each company has said otherwise about stamps/spacers, which is one of the main differences between the Amerimax and Simonton. Company A (from whom I'd like to get the Amerimax from) says a rubber spacer is much better than the seal has a lower failure rate, less fog, and is much quieter. Company B (Simonton) says rubber spacers are bad and were invented only after the Obama Administration offered the bonuses; Because the Simonton Daylight Max has less vinyl than the Amerimax or other frames, he said, they did not need to replace the stainless steel spacer with rubber in order to get their performance rating to the necessary level. He said rubber spacers are rubbish and iffy, and that metal spacers have proven to work for twenty years. He said rubber is only good when you need a curved window that needs a flexible spacer. He also argued that the small difference in performance level between Simonton-with-metal and anything else with rubber is very small and nothing compared to the difference going from a single to double panel, so it's not worth worrying about. The other supposed selling point of the Daylight Max is the thinnest frame. But when looking at the windows of the neighbors, I think this would only make a difference in terms of light in the house in a very narrow window. Otherwise, in a window three feet wide or six feet wide, I'm not sure if the difference is negligible or really matters. I'm in Southern California. I would like some advice on these two topics. Thank you very much!! Anna - Owner - since 2016 [Site [Site Answer] Anna, I wouldn't be too hung up on the different spacers, or I certainly wouldn't make this the deciding factor when you're trying to decide who to go with. Most people in the industry will tell you that a non-metallic spacer will provide better performance, although there are a number of factors, such as material that the core is made of. I think it's fair to say that the Amerimax Portrait of Craftsman is a better window than the Simonton Daylight Max. The Daylight Max has a thinner frame, though out of hand I don't know how it compares to the Amerimax frame. I'd go with the Anlin/Amerimax over the Simonton, but I'd be sure to include that Simonton makes some high-end vinyl windows that are pretty good, better than the Daylight Max. Dane - Site Editor - from 2016 Simonton's 7300 Daylight Max vs. 6200 Vantage Pointe I'm looking at 6200 Simonton Series sliding with a clear viewing window view by home deposit or a 7300 Simonton daylight sliding and window through another co window. Which series is best? Alice - Homeowner - from 2016 [Response from the site's editor] Alice, the 6200 series is probably the best of the two, but not by much. The maximum daylight window uses a slightly narrower frame that will provide more display area, but will sacrifice a little in terms of performance numbers. However, I'm not a big fan of high definition installation as a general rule of thumb, I worry that subcontractors won't do a great job and then no matter what window you bought. If you go with HD, make sure you talk to the installer and ask for a quick pop-up where the installation will go and see how thorough your response is. Ask the same question from the other installer and see how their responses compare. I would say go with the best installer over the best window, since these two are so close and made by the same company - basically they're not mid-range ruffled vinyl windows, one is marketed as a West Coast model and the other is marketed as an exclusive HD model. The quality of the installation must be the difference. Dane - Site Editor - 2016 Simonton Daylight Max Please give your opinion on the Simonton Daylight Max. I live in San Diego, my window sill is 20 years old and you could. Is readjustment of a viable option, with the reconstruction of the syringe either with treated wood or wood-fenced aluminium? The new construction is 3x the cost! Thank you, Jenna Jenna - Owner - from 2016 [Response from the site publisher] Honestly, you need to ask the three or four (where appropriate) contractors or companies that come out to give you an offer if they recommend a new build or if you can get away with a replacement or retrofit window. This gives you a good broad set of professionals who must provide a general consensus. It looks like you'll have to rebuild the sills anyway, which is where a lot of the cost is be anyway. Normally, if your amples are rotten, there will be some water or rot in some of the other surrounding forests etc. The question of the new construction or retrofit will depend on what material is on the outside of the house, what steps are needed to remove the new construction windows that are now up, etc. That's why I'm saying get a handful of opinions. You'll also be surprised by the price difference local businesses will find. In terms of windows, the Daylight Saving Time Max is well in my opinion. You're in San Diego, so I'd recommend the Window of Tuscan Milgard, the Anlin Del Mar and the Amerimax, Amerimax Portrait Craftsman, and the Simonton 9800 Impressions. These are all good vinyl window that should be available in your area and will fall at a mid-range vinyl window price point. Let me know what contractors say about the project! Dane - Site Editor - 2016 Simonton Daylight Max vs Ply Gem Pro I'm watching the Ply Gem Pro series and the Simonton Daylight Max. What would you recommend and why? Gwen - Owner - from 2015 [Site Editor Response] Gwen, should mind the Ply Gem Pro. The Simonton Daylight Max uses a narrow frame to provide maximum light, which will equal more glass or display area, but at a performance cost. The value U and AI will be a little lower in the Pro than the Daylight Max. The Ply Gem Pro will be a more robust window in my opinion. By how much, this is up for debate, but if I were making the choice, that's what I'd go with. Be sure to get a good install from a renowned local company. This is important to make sure that the window is properly placed and secured in the window and that it will provide the energy efficiency you need from new windows.
