Vax is another brand that produces dehydration built with UK weather conditions in mind. Their impressive line of dehydration can meet almost every budget and requirement. But, if you are looking for one of the best creations from this brand, then Vax DCS2V1MP Power Extract 16L dehydration is worth checking out. Much like the Ebac 2250e, the Vax DCS2V1MP dehydration has impressive water extraction, heavy assembly and a large water collection tank. This model also has a caster wheel, making it easier to transport compared to the aforementioned dehydration. It also sits nicely as the middle unit of Vax's Power Extract range dehydration. See more ImagesThe Vax DCS2V1MP may stand as a less powerful unit, but it's more affordable and equally feature packed as the top model in this range, (DCS3V1 PowerHP Extract dehumidifier). So this makes it one of the best options from Vax Power Extract dehydration when it comes to a good balance between price tag and features. Vax DCS2V1MP - Specs - Information Vax DCS2V1MP Specifications - Information Vax DCS2V1MP Power Extract Dehydration, 16 Litre, 370 W, White/SilverAuto Features, Silent Night Mode, Fan-only Mode, LED Display and TouchPad, Condensation Elimination, and Color Display for Vax White/SilverAuto features, Silent Night Mode, Fan-only mode, LED display and touchpad, removal of condensation, and color display for humidity levelsPrices - information last updated on 2020-10-19DesignTaking on standard rectangular style boxes dehumidifiers with sleek and modern finishes, Vax DCS2V1MP units are not ugly, but it won't be a victory in dehumidifiers with sleek and modern finishes, Vax DCS2V1MP units are not ugly, but it won't be a victory for dehumidifiers with sleek and modern finishes. That this device has a shot to win, although it is the title of the most designed dehydration. There is a lot to love about this dehydration from its quick release of a hidden water tank, to a washable filter, pop-up air filter covers. The digital control panel design feature we found most useful, however, is a digital control panel with an LED display that is located at the top of the dehydration. Thanks to this control panel, all dehydration features just a touch away. The panel is very sensitive though, so you only need to press the controls slightly. When the Vax DCS2V1MP is connected, the digital display panel is about life displaying 5 touch buttons that are self-evident without even looking at the user's manual. These include a power button (with the usual power symbol), as well as a minus button (with accompanying and - symbols) to set the target humidity threshold, and a button with a watch symbol to install the device's timer function. The fifth program button gives you access to 4 pre-installations Day, Clothing Dry, Fan Only, and Night) DCS2V1MP DCS2V1MP Modes The panel also displays a number of light indicators for the timer function, the tank, all 4 modes of operation, as well as to display whether dehydration is on or on standby. LED lights all illuminate the appropriate features. The PortabilityThis DCS2V1MP Power Extract unit is also specifically designed to be portable, despite its slightly bulky nature. Weighing in at 14.6kg this dehydration would be difficult for many people to carry, but thanks to carry handles, this task is made a little easier. The capture consists of 2 deep recesses engraved on either side of the back of the device. They provide a good place for you to grab and lift dehydration with both hands and a nice house halfway between the actual handle to carry and only one recessed grip found on the other dehydration. These handles also make it possible for 2 people to carry dehydration to help ease the load. However, you don't need to lift the device every time you want it to move. Located at the base of this dehydration are a set of casters that provide you with the ability to simply click or pull it into any position/room you need. The speed of water extraction on this Vax DCS2V1MP power extract is a very respectable 16 litres per day indoors up to 25 m2. Vax does not provide specifics on the test conditions that led to the arrival of this production level. However, it can be assumed that, like most dehydration, this 16-litre unit from Vax has been tested in a humid tropical climate. So if you have a very serious wet problem in a very warm house (or drying laundry) it is unlikely to expel a full 16 litres every day. It is also normal for dehydration to collect less water over time. This is because the device works for the first few applications to eliminate excess moisture from your home. As a result, the rooms in the house will become drier and as such have less water to be stretched out. The good news, however, is that Vax has made it possible for you to know with certainty if dehydration works well in your home, no matter how many liters of water you get at the end of the day. First, the device displays the current humidity of the room on a small section of the box (located between buttons and buttons) on the digital panel. There is also a 3-color light indicator on the body of the device, which allows you to know the current state of humidity in the room at a glance. The light light shines red if the room is wet, blue when it is too dry for comfort, and green when the optimal humidity level is reached. This way you will always know if the air in your home is comfortable and thus make changes when it is not. The device has a flexible humidistat, can be set in the range of 80% to 30% relative humidity. The controls to use for this are buttons and - touch buttons where adjustments occur with step/decrements 5%. With perfect relative humidity for and comfort placed at around 50-55%, you have many options to keep your home at a level that is comfortable for you. We always recommend starting with dehydration at the highest parameter (to combat wet quickly) and then gradually reduce this over time until you find the perfect setting that leaves your home sitting in the ideal 50% (ish) range. Cleaning the Vax DCS2V1MPFeaturing 5.5-liter water tank, emptying the Vax DCS2V1MP as good as it gets. Depending on the conditions in your home, you can leave dehydration on your own for a long period - from half a day to 2 or even 3 days in a row without having to empty the tank. But if you want to leave it for long periods unattended (or just don't want to clean the tank at all), a drainage tube is also provided, which can be used to set up continuous drainage - provided you can find your dehydration near the sink or appropriate drainage stains. Other featuresCustomer Impressions / Reviews As all products, this dehydration has both supporters and no-sayers. The general consensus, however, is that when it works, the DCS2V1MP Power Extract is great. According to users, the extraction of water is impressive, the fan is powerful, and the design is wonderful (especially the change in color for humidity levels). A little caution on the part of customers, however, is that dehydration is loud (some users even claim the night mode doesn't do much in reducing noise), the continuous drainage hose isn't long enough, and that the control panel can be a bit temperamental, so you'll need some patience. Impressive list of featuresAllous for manually adjusting humidity level Day looks and easy to use controlsEliminates moisture, condensation, and dirt from the houseExpensive (cost 200 pounds or more depending on where you buy it) Water tank pulls out easily through the release handles, but the process of emptying a little trickDespite Smart Air Sensor technology, this 16L Vax dehumidifier is a heavy duty device and as such is not a low-energySummaryThe Vax Power Extractor certainly has some useful features - such as night mode. It is also one of the few units that come with the benefits of doubling as a fan and providing real-time feedback on room moisture and humidity. All of which makes dehydration quite impressive. So if you can put up with multiple falls like noisy operations (although, with the exception of ABC's MeacoDRY, the range is a common complaint for every dehydration), and a higher energy consumption, the Vax DCS2V1MP is a quality of dehydration. It's powerful, smart and pretty easy to use.
