Worksheets are Google's answer to Excel's dominate in spreadsheet games. As such, it packs many convenient features that you will need to get through your day. An important feature is the ability to navigate your data and make sense of it all. Here's how to organize in Google Worksheets to help you save time. See also: 10 best office apps for Android to get things done! One of the most popular apps for spreadsheets is to track your contact list, so that's how we'll structure this example. Sorting your contacts is one of the easiest ways to alphabetize in Google Worksheets, so leave your spreadsheet behind. It's the same if you're also trying to sort by date in Google Worksheet. See also: How to use Google Drive: Everything you need to knowHow to organize in Google Worksheet:1. Before you can dig into the classification, you will have to decide which data is important. Start by selecting all the rows and columns you plan to use.2. Go to the Data tab, which is between Format and Tools. This is where you'll manage your sorting, whether you choose to organize your Google Worksheet by column or otherwise.3. Scroll down to the option that says Sort Range. This opens a menu box. If your data has a title line, select the check box. In our case, we chose not to highlight the headlines.4. Line says Sort by is your chance to decide how you want to organize your data. Since we're using a contact list, we'll sort the example by last name (Column B). Open the drop-down list to select the column, and then select between the A → Z or Z → A buttons, and then click Sort.You will now see all your contacts sorted alphabetical in alphabetical order according to them. Arranging Google Sheets quickly can save you a lot of time in finding a specific contact! Learn how to filter in Google A little more complex worksheets, so check back soon for instructions to help you. See also: 10 Excel apps and the best spreadsheet apps for Android! Tagged: DealsGoogle Drive Like most word processing software, Google Docs comes integrated with a tool to check your spelling and grammar. Here's how to use that tool. By default, Google Docs spelling and grammar checking is turned on when you open the document for the first time. Any time you misspelled a word or typed yours when you mean you are, the spelling checker highlights the error with a red ripple line, prompts you to make changes. I'll use Google Doc, but the same spelling and grammar tools are also available with Sheets and Slides. First, open the document using Google Docs. To make sure the tool is turned on, you can start typing some misspelled words or go to > Spelling and make sure Underline error is selected. Then any time an error is created it will appear with a squiggly red line underneath it. You can right-click any error to fix them in flight to open the tool. A small window opens with a few options to choose from, such as changing the error to a suggested fix, ignoring the current error, or adding a word to the dictionary so that it won't appear as an error anymore. To check your entire document for spelling errors, go to Tools > Spell Check > to open the Spelling Check tool. Google Docs will guide you through each error the document has detected, and you can make similar edits that we just mentioned. If there are any errors in your document, the tool will proceed through the document until all errors are fixed. How to use the dictionary Along with the spelling and grammar checker, Google Docs has a built-in dictionary that you can use to look up words and even suggest the meaning of the selected words directly inside your document. From your document, highlight a word, right-click it, and then select Define [from]. Also, after highlighting the word, press Ctrl+Shift+Y to open the same window. A window opens with a dictionary definition of the word along with a list of word-related dictionaries. Although spell and grammar checking is a powerful tool for spelling errors and misspellings, it is not entirely foolproof. It cannot correctly correct all contextual errors (such as using throws instead of passes) or identifying sentences or commas. Spell checking in Google Docs works just like spell checking in other popular text processing programs. When Google Docs detects an incorrect spelling or word error, a red or blue line of ripples automatically appears below the word. Spell check is easy to use and here are two ways to conduct Google Docs.Check out the products mentioned in this article: MacBook Pro (From \$1,299.99 at Best Buy)Lenovo IdeaPad 130 (From \$299.99 at Best Buy)How to check spelling on Google Docs one word at a time Here's how to correct spelling when you go through the document.1. When you right-click a word with a grammar error, Google Docs opens a menu with a proposal labeled Consider changing to. Click one of the suggestions in the box to make the edit. Google Docs will give you suggestions before you edit them. Laura McCamy / Business Insider 2. When you click on one of the words that has squiggly red lines under it, Google Docs gives you a stronger move in the right direction – You mean. Click on the correct spelling in the box to make the repair. Over time, Google Docs will start recognizing some of the words you use without having to add them to the dictionary. Laura McCamy/Business Insider 3. If Google doesn't recognize a word you use a lot, such as the appropriate name, you can add it to your custom dictionary in Google by right-clicking a specific word and selecting Add [word] to the dictionary. How to check spelling on Google Google for the entire documentHere's how to spell check your whole Google Doc at one time.1. Click Tools in the menu bar. Google Docs can check spelling on the entire document at the same time. Laura McCamy/Business Insider 2. In the drop-down list, hover over Spelling and grammar. In the drop-down menu that appears, select the top option, Spelling and grammar. You can also check or unsalt options to hide spelling and grammar errors. If you're not interested in editing, you might want to hide the alert. Laura McCamy/Business Insider 3. Spell check will move through your Google Doc and a pop-up box with suggestions for each misspelled word will appear on the right. You can Ignore or Accept each proposal. If you ignore the error, it won't show up again in the spelling check. Laura McCamy/Business Insider 4. When you're done, you'll get a notification that your spell check is complete. There should be no more squiggly lines in your document. Related coverage from How To Do Everything: Tech: Get the latest Google stock price here. As long as you've auto-spelled and the grammar checker is turned on, Outlook automatically alerts you to any errors in the email you create. With Outlook spell checking not working, you can ignore a mistake that might be unscrubbing or embarrassing. Learn the most common causes of this problem and solve it quickly. These fixes apply to Outlook for Microsoft 365, Outlook 2019, Outlook 2016, Outlook 2013, and Outlook 2010. Christin Hume / Unsplash This handy feature helps you avoid embarrassing misspellings. What causes Outlook's spell check to misfire, or doesn't work at all? There are a few factors that can lead to spell check not working in Outlook. Auto Spelling and Grammar are turned off. The language is incorrect. A broken patch or Outlook installation. When working properly, the Outlook Spelling and Grammar tool will notify you by stricking possible errors. This is a visually sure that it is working normally. Troubleshoot problems that may occur to discover why the problem isn't working and fix it. Restart Outlook after each troubleshooting step to make sure that any changes are applied. Restart Outlook. After Outlook restarts, make sure the spell checker works as normal. It's frustrating, but rebooting can fix many problems. Set Outlook Auto-Check. Make sure Outlook is set to check your spelling every time you send an email. Change the default language in Outlook. A language variant can make it seem like the spell checker isn't working properly. As Outlook uses MS Word to compose, you may want to make sure that what language it is set to be For example, Uk English and American English spell many slightly different words. Run Spell Check manually. Type multiple misspelled words in a new email, and then choose Review > Spelling & Grammar run spell and Grammar checks manually. This allows you to see if spell checking is working at all. Disable message ignore. Check to see if spell checking ignores certain parts of your email. If Outlook is set to ignore areas in the reply and forward the message, it may cause the tool to not work. Go to Custom > File > And delete the text Ignore the original message in reply or forward under Compose message, and then choose OK. Repair Outlook. If it doesn't work at all, try to fix Outlook. If it works manually, but not automatically, continue the troubleshooting process. There is no built-in spell checker available in the online version of Microsoft Outlook. Instead, use browser extensions like Grammarly, your system's built-in spell check functions, or install spell and grammar checking apps. In Windows 8 or later, you can turn on the option to repair the system yourself. Go to PC Settings and search for Misspelled words and Highlight misspelled words, and then turn on both words. Microsoft Word is a powerful word processor used in offices and homes everywhere. One of its most important features is the spelling and grammar checking tool, which saves many documents from embarrassing mistakes. While this function works well most of the time, it can sometimes appear to stop working. Some simple troubleshooting steps can help Word's spelling and grammar checking tool be backed up and running quickly. These troubleshooting steps apply to Word for Microsoft 365, Word 2019, Word 2016, Word 2013, Word 2010, and Word for Mac. Fernando Hernandez / Unsplash There are several reasons why Word's spelling and grammar checking tool might not work. A simple setting may have been changed or language settings may be turned off. Exceptions may have been placed on the document or spell checker, or the Word template may have a problem. Whatever the reason, some easy fixes are likely to have Word back to pointing out mistakes in your document soon. The spelling and grammar checker can return error notifications about the default language or say Spelling and grammar checking is complete, without flagging any errors. You may not receive any notifications, but you may notice that the tool isn't working. Follow the troubleshooting steps in the order we present, from the simplest solution to the most relevant measures. Make sure the Spell Check when You Type setting is turned on. This is the most likely culprit and the simplest solution. If you haven't turned on automatic spell checking, the tool won't work as you'd expect. Also, select the Mark grammar errors as you type check box and Check grammar with spelling. Mac, choose Word Options > > Spelling & Grammar, and select the Check spelling as you type check box and Check grammar as you type. Check word export control language. Word can be set to the wrong sound control language, causing Miss the error. Make sure Word is check out in the correct language and see if this solves the

problem. Check for error-checking exceptions. A setting for hiding error-check errors, or other exceptions, may have been enabled in the document. The spell checker may not work as expected if an exception has been made to check spelling or grammar. Open Word in Safe Mode. A Word add-in may interfere with the spelling and grammar checking tool, causing it to work occasionally or completely inactive. If you start Word in Safe Mode, the add-in won't be turned on. See if the spelling and grammar checking tool works. If so, move on to step 5. Disable add-ons one by one. If the spelling and grammar checking tool works in Safe Mode, the add-in could be a problem. Disable add-ins one at a time to isolated one that causes the problem. When you find the culprit, permanently disable it. Rename the default template. If the problem remains unsolved, there may be something wrong with word's global template, called normal.dotm. Renaming a template can solve the problem. Word creates a new default document without any customizations. When you rename the normal.dotm template, you'll lose the custom default settings you've set up, including styles, toolbars, Auto Text entries, and macros. Repair Word. If all your efforts have not solved the spell check issue, use the built-in office repair utility to repair the word. This fixes the entire Office even if there is only one application you want to repair. This tool is only available for Windows versions of Office. Contact the Microsoft Word help and learn website. If you still can't fix problems with Word's spelling and grammar checking tool that doesn't work, visit the Microsoft Word help page. With a searchable knowledge base, community forums and contact information, you'll find additional help. Help.
