Latex centering table of contents title

Information and discussion about LaTeX general text formatting functions (e.g. bold, italics, enumerations, ...) p.david Post: 43 Joined: Thu Sep 10, 2009 5:22 Postby p.david » Fri Dec 11, 2009 12:50 Hello,I have the following piece code:\documentclass[a4paper,12pt,openany,oneside]{memoir}\renewcommand{\contentsname}{TABLE OF CONTENTS}\begin{document}\tableofcontents\chapter{Test}\end{document}I want center the title TABLE OF CONTENTS. How can I do that? I also want to center all other titles such as LIST OF NUMBERS, LIST OF TABLES and LIST OF ATTACHMENTS. Thanks in advance meho_r Post: 823 Went: Tis Aug 07, 2007 5:28 Postby meho_r » Fri Dec 11, 2009 2:11 You may try this:\renewcommand{\printtocitle}{\centering\Huge\bfseries}\Note that when redefining \printtocitle you have to set other attributes as well (in the example I like \ Huge and \bfseries). For more infos take a look at Chapter 9. in memoir documentation. s.david Post: 43 Went: Thu Sep 10, 2009 5:22 Postby s.david »\Fri Dec 11, 2009 2:24 pm meho_r wrote:You may try this:\renewcommand{\printtocitle}{\centering\Huge\bfseries}\Note that when redefining \printtocitle you have to set other attributes as well (in the example I set \Hugeseries and \bf). For more infos take a look at Chapter 9. in memoir documentation. Hi,Thanks for answering, but it didn't work. I still have the title in line on the left. Why? Greetings meho_r Post: 823 Joined: Tis Aug 07, 2007 5:28 pm Postby meho_r » Fri 11 Dec 2009 03:27 Strange. On my system (TeXLive 2009), works fine. Here's your code with the additional line from my previous post to test:\documentclass[a4paper,12pt,openany,oneside]{memoir}\renewcommand{\printtocitle}{\centering\Huge\bfseries}\renewcommand{\contentsname}{TABLE OF CONTENTS}\begin{document}\tableofcontents\chapter{Test}\end{document}And in appendix is its output. I tested it with pdflatex and xelatex. Can someone else test it and confirm if it works? Attachments TOC_test.pdf The output of the above code. (19.65 kB) Downloaded 307 Times Lucia Post: 36 Went: Wed Dec 31, 2008 9:03 PM Postby Lucia » Fri Dec 11, 2009 7:21 I just tested the code with that additional line and that's working on my system, too. I have TeXLive 2008. p.david Post: 43 Joined: Thu Sep 10, 2009 5:22 Postby s.david » Fri Dec 11, 2009 11:45 pm meho_r wrote:Strange. On my system (TeXLive 2009), works fine. I tested it with pdflatex and xelatex. Can someone else test it and confirm if it works? Yes you're right. I'm sorry about this. I tried it on complete documents in which did not work. As an independent document, that's all right. In my original document, I use something like this:\documentclass[a4paper,12pt,openany,oneside]{memoir}\renewcommand{\contentsname}{TABLE OF CONTENTS}\begin{document}\tableofcontents\chapter{Contents}\end{document}\chapter{Test}\end{document}It's a long story why I did this. I want to center this chapter title alone, not all chapter titles. How can I do this? March 1, 1996 using tex2html translator version 1.46. Tables are common elements in most scientific documents, LaTeX gives a large large of tools to customize tables, resize, combine cells, change the color of cells, and so on . This article explains how. Introduction Below you can see the simplest work exeeeten on a table \begin{center} \begin{tabular}{c c c} c & c & c \end{tabular} \end{center} The tabular environment is the default method for LaTeX to create tables. You must specify a parameter to this environment, {c c c} tells LaTeX that there should be three columns and that the text inside each of them must be centered. Open an example in Overleaf Create a simple table in LaTeX The table system environment more flexible, you can put separator lines in between each column. \begin{center} \begin{tabular}{|c|c|c|} \hline c1 & c2 & c3 \\ \hline \end{tabular} \end{center} This ensures that three columns, separated by a vertical line, will be used in the table. Each c means that the contents of the column will be centered, you can also use r to align the text on the right and l for left alignment. \hline This will insert a horizontal line on top of the table and at the bottom too. There is no limit to the number of times you can use \hline. cell1 & cell2 & cell3 \& Each & : is a cell separator and double-backslash \ sets the end of this row. Below is a second example. \begin{center} \begin{tabular}{|c|c|c|} \hline c1 & c2 & c3 \\ \hline \end{tabular} \end{center} Col1 & Col2 & Col3 \& [0.5ex] \hline \hline 1 & 2 & 3 \\ \hline \end{center} 4 & 5 & 6 \\ \hline \end{center} This will insert a horizontal line on top of the table and at the bottom too. There is no limit to the number of times you can use \hline. cell1 & cell2 & cell3 \& Each & : is a cell separator and double-backslash \ sets the end of this row. Below is a second example. \begin{center} \begin{tabular}{|c|c|c|} \hline c1 & c2 & c3 \\ \hline \end{tabular} \end{center} Col1 & Col2 & Col3 \& [0.5ex] \hline \hline 1 & 2 & 3 \\ \hline \end{center} 4 & 5 & 6 \\ \hline \end{center}
