## Mophie juice pack air iphone 5

Image unavailable forColor: Mopahi brought us one of the first phone 5 battery cases with juice pack helime (\$44.99 on Amazon), and set a high bar with a thin, light design together with a capable backup battery. Hungry for more power, The Mophee Juice Pack presents air (\$99.95 directly), which looks a lot like helime, but packs a large battery for \$20 more. While the air increases a little more power than hem, the latter represents a better balance of price, size, and extra juice. Thus, Helime Phone 5 retains our Editors' Voice Award for battery cases. Design and features with the juice pack edit edu helime usually with the same gourdp soft touch plastic exterior and two part building sliding. The wind is slightly larger and heavily at 5.54 to 0.63 inches by 2.60 and 2.68 vince (compared to 5.49 of hem by 2.49 to 0.59 inches and 2.44 vince), but even more side by side is that it's hard to feel the difference. Helyme and air cases will both add significant length on the phone 5, but air added a little more in each dimension. The helime is completely plastic coating around the air's coasts as opposed to the smooth case. Air also uses plastic button layers for volume and strength, instead of cutouts found on helime. Plastic buttons feel a little weak, but they are easy to access, because the cutouts of helime are a little too deep. In two cases the same camera kit and deep rekasasayd 3.5 mm jack, which you want to use the most standard headphones then need the included extender. Air is available in black, white, or red while hem is available in two colors of brown only. This case comes in two parts, with the section below to charge the inside electric connector and a micro USB port. Around the back are a use switch to turn battery signals LED, signal buttons, and juice flow. Snap two pieces safely, and install a phone is as easy as sliding 5 in the top section and snapping down. I like the likes of Mopahi to use a micro USB port to charge, while micro USB cables are fantastic and affordable, while electric cables are expensive and difficult to find. A micro USB cable allows charging via the plogging pass in phone 5 and battery case, but you will need to synchronize your phone using Wi-Fi instead. With performance and results air uses a 1700mAh battery, found in helime a shock with the capacity of 1500mAh, which should double the battery life of your phone to the claims 5. In my test, making a continuous call with Lte with Wi-Fi and Bluetooth switch, The Juice Pack wind added about 6 hours, 57 talking about time. Heilym, meanwhile, added 6 hours, 20 minutes on the same test. to 5 continues to itself for 8 hours, 40 minutes, so the air is not alive at most twice the power claim, but it does offer a little juice compared to hem. The Mophejuice Pack is a solid battery case for the iPhone 5, and it most increases battery life, I don't think it increases enough to verify the \$20 premium. The company's similar juice pack helime is a better deal and remains with our editors' choice, comparable performance, a slimer design, and more than one tasty price. Amazon MSPR \$99.95 Professional Check, see \$34.99 in light design. Electrical connectors in the built-in. More Cons Visit adds physical length to phone 5. Juice Pack Air increases the most additional life of any phone 5 battery case we tested, but the company's less expensive juice pack represents a better collection of helime performance and price.
