Click Delete to confirm. Step 4 Click on clear viewing data... Step 5 Select Empty Cache from the list. Step 6 Click on the clear view data at the bottom. The browser cache is now empty. Chrome 27 Chrome 4-10 Chrome 10-15 Chrome iOS Chrome Android How to disable the cache on Chrome for Android? I change the content of the page and update the page, but the content is still old. I installed nginx config as below, but it has no effect. #disable кэш add_header Cache-Control без кэша, без магазина, обязательного ревалидата; add_header Pragma without cache; add_header expires 0; Is there a way to get my newest page without manually clearing the cache over and over again? Your apps and web browser store bits of information to speed up your experience of using them. Over time, your phone can collect a lot of files that you really don't need. You can clean the files to make room for storage on your device. Cleaning up the cache can also help with problems with website behavior. Cleaning your browser cache and app cache from an Android phone is a quick and easy process. Here's a quick guide to how to do both. Clear the cache in the Chrome app (default Android web browser)1. Open the Chrome app on your device.2 Click on the three-point icon found in the top right version to open the drop-off menu. Click on the three-volume drop-off menu. Michelle Greenlee/Business Insider 3. Story and then clear the viewing data. Click History on the drop-off menu. Michelle Greenlee/Business Insider 4. If you want, choose the oldest date you'd like to clean with the Time Range drop-off menu. 5. Select cached images and files. Check cached images and files and then click Clear Clear Michelle Greenlee/Business Insider 6. Click clear the data to clear the cache. Clearing the cache from the side cache of appsApp is similar to a browser cache. These are small pieces of information stored to speed up your experience with the app. However, there may be times when the app suddenly closes or stops responding all together. The culprit may be problems with cached data. Clearing a cache is a quick and easy way to free up space and (hopefully) fix the wrong app. Cleaning up the app cache won't delete app data, such as account information. Here's how to clean up the app's cache:1. Go to the Settings menu on your device. 2. Click the vault. Click storage in Android settings. Michelle Greenlee/Business Insider 3. Tap the Internal Storage under the device store. Click The Inner Vault. Michelle Greenlee/Business Insider 4. Click on the cached data. Click the Cached Data button. Michelle Greenlee/Business Insider 5. Click OK when a dialog appears, asking if you're sure you want to clean up the entire app cache. Click OK to clear the app cache. Michelle Greenley /Business Insider Cleaning app cache will not delete app data such as account information. Application data, such as account information, can be removed from the same menu - act with caution if you choose to do so. Note: Phones without SD card storage will have no choice between an internal store or an SD card, as shown in the above screenshots. How often you should clear caches you may find it useful to clean the cache periodically, but a normal cache cleanup schedule is required. If you find that you usually clear the cache to make room, you can delete unused apps or archive stored videos and photos in the cloud. Installing a large microSD card is another option to meet the storage needs of your phone.
