Continue

PowerPoint is the leading presentation program. However, the software can be expensive, and not the most feature-rich on the market. We looked at several PowerPoint alternatives that are more cost-effective, easier to use, or include tools to create more modern presentations to determine the top six best competitive options. Top 6 PowerPoint Alternatives for Small Business Owners PowerPoint AlternativeBest For (Best Overall) Teams who want presentation software by collaborating in real timeCompensation that they want to automatically create a visually striking, Modern-looking presentationProvlasnice, who want to get feedback from audiences from their presentations via a surveyTheamova who want to make products marketing content, or i presentationbusinese, which want to give devices highly focused presentations How we rated alternatives to PowerPoint Above all else, good alternatives to PowerPoint should enable companies to make an effective presentation with a simple set of tools for creating, editing, and sharing slides. Alternatives should be more affordable than PowerPoint, offer unique features, or both. Apps should also allow users to control the appearance of the slide show and from the point of view of transitions and animations. The criteria we used to evaluate powerPoint alternatives include: Cost – The general price of the platform should be accessible to most companies. Easy to use – demo apps must be easy to use and understand. Editing tools – The alternative should allow users to add custom text, visualizations, or colors to their presentations. Templates - PowerPoint alternatives should offer ready-made templates for users who don't want to build presentations from scratch. Audience interactivity – We searched for platforms that encouraged audience feedback or allowed presentations or offer surveys during a presentation. Presentation tools – We've compared notes, indicators, and storytelling options that help presentations make them more efficient. Based on the criteria set out above, Google Slides is the best choice for most small businesses looking for a PowerPoint alternative. It is free to use and has all the tools you would need to make powerful business presentations. It even allows viewers to ask questions and offer notes and a virtual laser pointer for the showers. Best general PowerPoint alternative for small businesses: Google Slides Google Slides is part of the company's business productivity and collaboration software, which also includes in-does, sheets, and forms. Google Slides is easy to use, with a robust set of tools that you can create as you see fit. Best of all, it's free with personal Google accounts or comes bundled with paid G Suite services. That's why Google Slides is our best overall choice for small businesses cooperation and adaptation tools. Google Slides Pricing Google Slides is free with any personal Google account. and also comes bundled with the G Suite platform for business email accounts, which costs \$5 to \$10 per user per month. All the apps we've compared have a free version, but only Slides offers all its features regardless of the plan you've chosen. Pricing plans include: Personal Google Accounts: Free with 15GB of G Suite Basic storage: \$5 per user per month with 30GB of G Suite Business storage: \$10 per user per month with unlimited storage, activity reporting and retention policies An additional 100GB of storage is available for \$1.99 per month. Google Slides Google Slides features you can quickly and easily create and present slide shows with lots of suggestions to choose from. You can even important presentations. The Google Slide Editing Tool interface will preferably remind you of PowerPoint and is available with a basic set of tools for creating animations into slides. Like PowerPoint, you can convert data from Excel and Google List spreadsheets into graphs, and you can also insert pictures and videos from any type of mainstream file. Google Slides does not offer flashing animations offered by Prezi or automatically creating slideshow Slidebean, but it has the same basic options as fade transitions and flying animations. Its editing tools are also basic, but good enough to create a slide show that looks professionally and aesthetically pleasurable, while also meeting the needs of groups of all sizes looking for low-cost alternatives to PowerPoint. Google Slides templates use all types of users, and as such, you can create your own slides from scratch or choose from 26 templates. You can use them for business use and edit them as you see fit. You can also use models from third-party websites such as SlidesCarnival, which offer hundreds of free templates with surprising models. The choice of templates is small, especially compared to PowerPoint, which has more than 100 models to choose from. Canva also has a wide range of propositions at more than 50,000. However, Google Slides is good for any team that is comfortable with a small set of basic templates or has nothing against finding third-party suggestions. Presentation tools Slides have apps for iOS and Android devices that allow you to use your phone as a remote control for presentations when your PC is connected to a TV or You can't do this in PowerPoint without getting a third-party app. It also provides presentation tools such as private notes, a cursor that allows you to highlight items on the screen, and a basic Q& A tool that go to the URL on your device and ask questions to presenters. This is a pretty robust set of presentation tools compared to other alternatives. Canva offers notes to the presenter, but without a pointer or Q& A. Unfortunately, Google Slides lacks audience behavior analytics features found in a more robust alternative plan, as well as the ability to send surveys and surveys and surveys, such as drag. However, it is still a great free option for any team that wants interactivity with their audience and save notes on their presentations. Collaboration features Like all Google business apps, team members can sign to the same slide presentation, edit, and comment on slides. You can set permissions for who can see, comment, or edit content. However, collaboration extends past the slide, as teams can then participate in linked Google sheets or other embedded documents. This is a great option for teams working together and wanting to update your presentation data in real time. Templates google slides offers many features to create respect-friendly presentations. With that being said, your presentation will be very similar to the PowerPoint slide shows that people have seen for decades. To do something more surprising, Prezi uses white-board formatting that delivers content with dramatic zooms and rotations. What users think about Google slides Users are very excited about how useful Google Slide is, especially for the free tool. Collaboration features are especially popular with remote teams, and most customers find the platform incredibly easy to use. There are complaints about some features that were discontinued when Google releases platform updates, but those customers have also noticed that the company is quickly fixing problems. We use Google Slides to create our presentations and use it more like PowerPoint. The user interface we find very easy to use and intuitive. Over time, it helps create presentations much faster. – Amit Roznak, Head of E-Commerce, AdScale Best PowerPoint Alternative for Automatic Presentations: Slidebean Slidebean is one of the newer PowerPoint alternatives to market entry. 24 per user per month, Slidebean automatically creates and formats a presentation for you when you type text and images. The advanced version even offers analytics. The quality of these slide shows is high, but they offer an aesthetically pleasing look. Our choice for companies that want automated help in creating excellent and visually arrested presentations. Slide Prices You can start building a Slidebean presentation for free, but you'll have to pay to share presentations with others. Plans cost either \$96 a year to issue a Starter or \$228 a year for Version. Version. Version. Is expensive and the only platform we have looked at is not offering a free edition. StarterPremium Feature slideSPrip \$96 per year\$228 per yearCocouting 🗸 🗸 Representations Share 🗸 🗸 Primous Privacy Setup 🗸 🗸 Priming Presentation 🗸 🗸 Media Gallery Access Prober to PDF and HTML ANAlytics Prium Content Templates Custom Branding Custom Color Palettes External Font Support Starter The Starter edition gives you access to the basic set of slide building tools. You can collaborate on projects with your teammates present content online, and access a library of basic peer-generated templates. PowerPoint does not offer such community-generated content. Then simply add text and pictures and let Slidebean use it to set up a presentation for you. Like the free version of Canva, this track also forces you to choose from a range of limited-color companies, and could be frustrating for designer-safe users. This is the best start plan for teams who want to create a slide show of professional looks online, but don't need granular control over how they see content. Premium Premium version gives you analytics, the ability to add your own brands and fonts to presentations, and access to the company's Premium Content Templates, which is embodied by the company itself. You'll also get priority support if you need help with a platform that PowerPoint doesn't offer. However, it does not offer a service uptime contract, such as Prezi's premium version, nor does it allow you to ask questions to the audience in real time. Therefore, this version of the platform is best suited for teams who want to gather audience insights from their presentation software in addition to the content of their presentations for them. Slidebean Presentation Creator What Slidebean Is Missing Impressive is that slidebean can create a slideshow for you, but most presentations don't look much more advanced than something you could create on Google Slides yourself. If you'd rather spend time inserting animations and transitions for yourself, then consider a Google product. What users think about the slide Users love the ability to enter content and presentations, which can make even the smallest companies look like today's hottest, hippest startups. However, there are complaints about frequent errors and hiccups of the system. Best PowerPoint alternative to audience insight: Drag Drag is a slide show platform with an emphasis on creating audience feedback; has a free plan, as well as paid plans that start at \$15 per month. In addition to content editors and transitions, Swipe allows you to manage social surveys during presentation and tracks behavior, I tell you when, where and how long the audience viewed each slide. Swipe is good for companies that want to collect audience data and read insights. The free version of swipe pricing allows you to make up to five presentations with unlimited users. Paid plans go from \$15 per month for unlimited users in Plan Pro to \$36 per user per month in the business plan. This is consistent with other demonstration software in terms of price advantage. Swipe Tiered Features FreePro TeamBusinessPricingFree\$15/month\$18/month\$36/monthPresentation Limit5UnlimitedUnlimit Links 🗸 🗸 Priority Support 🗸 Visitor Insights CRM Integration Dedicated Account Manager Designue Consultancy Online Training Free The free version gives you access to all of Swipe's building tools, but limits you to just presentation fives. It also doesn't give you analytics or the ability to protect sensitive information with passwords, but you can place audience feedback modules in interactive survey presentations. Users then respond to surveys by clicking on responses and is a feature supported both live and recorded versions of the presentation. You can't directly survey your PowerPoint audience at this time without using a third-party plug-in. This makes the popular app look archaic compared to a prank. This edition of the platform is good for companies that want to simply try out a Swipe for themselves and upgrade to a paid plan later. Pro For \$15 Monthly Edition Pro offers unlimited presentations, analytics and privacy measures for your presentations. PowerPoint also offers analytics, but doesn't offer live surveys in any capacity, which means you need to use another piece of software to manage audience surveys across your presentations. Despite the set of features, this version is significantly more expensive than the monthly cost of the Starter version for Slidebean or Haiku Deck Pro. It also does not have a choice of templates found on other solutions. That's why this platform is best for companies that want a demonstration tool designed to interact with the audience that's going on. Team The Team edition is \$3 more per month that costs \$18 per month. However, the only key difference between this plan and the Pro plan is that it adds priority support. This means that if you contact the help company, you will contact a representative in front of customers who subscribe to smaller higher services. PowerPoint doesn't offer similar support options, but if you have ongoing problems with the platform, you probably won't need this level of service. Company To The software version adds visitor insights, which gives you information about how long users have viewed each of your slides, as well as when they have viewed your content. You can download this information by telling your team what your customers and colleagues find most interesting about your presentations. It also offers CRM integration, which connects data from these insights to platforms such as Zoho and Salesforce. At \$36 per user per month, this is the most expensive tool we've looked at. That could be unaffordable for some smaller teams. Nevertheless, it could be great for companies that want to collect rich insights from their presentations and automatically export this information to their CRM. Swipe Interactive Presentations What's Missing Swipe Swipe is excellent offering an interactive audience of social surveys. But if you don't need these, then the slide construction tools aren't nearly as robust as the other services we've looked at. Google Slides also provides a broader set of templates to select, as well as the ability to configure more options about how to behave and design a slide. What users think of Swipe Professionals, which deliver informational seminars and other kinds of presentations adore the features of interviewing audiences in Swipe. Users also report that the platform is incredibly easy to use With that said, users feel that getting used to the interface doesn't take time. The best PowerPoint alternative for mobile iOS: Haiku Deck is perhaps the best presentation software out there for editing on your iPhone or iPad as PowerPoint alternatives go. Although there is no version of Android, it boasts the best mobile app of all the platforms we've looked at. It even comes with an AI assistant that can automatically insert pictures and formatting. With this, Haiku Deck is ideal for iOS users who want to create presentations on the go. Haiku Deck Price Haiku Deck free basic version allows you to create one presentation. Paid plans start as low as \$9.99 a month for the Pro version and go all the way to \$29.99 per month for the Premium version. This makes it among the more affordable options we have compared. Haiku Deck Features BasicProPricingPricingPricingFree\$9.99/Month\$29.99/MonthPresentation LimitOne Presentation Voffline Support Volume Search & Embed Vocustom Branding Volume Presentation Prover Point Image Search Volume Search Volume Search Privacy Control Volume Search Privacy Control Volume Search Notifications Live Web Payback Priority Support Basic Haiku Deck's free Basic version allows you to start building presentations on your desktop or mobile device. However, this is a more experimental program than a real free plan, since you are limited to a single presentation, but it serves as a good way to familiarize yourself with the Haiku Deck interface and its core set This entry-level package is extremely basic and without privacy control over slides. That's why you won't find features like a custom brand or the ability to embed a video like you would in PowerPoint, but you can still use the mobile app. This version is not intended for serious commercial use. The Pro The Pro version offers a set of features that would be suitable for any established company, such as a custom brand that is missing in the similarly priced Starter version of Slidebean. It also comes with AI help from an assistant company Zuru. This feature can automatically add pictures and suggest shapes based on your text. In comparison, PowerPoint does not offer such help for AI. Haiku Deck Pro doesn't include features to collect audience feedback, such as Google slides, or live election features like Drag, either. At \$9.99 per month, the Pro version is ideal for Mac users who are willing to test unproven technology and be on top of the slide show building. Premium gives you priority support, just like the most expensive versions of Prezi and Swipe. It also offers analytics features that tell you the time and location of users viewing your slides at a cost of \$29.99 a month. Although this is more expensive than PowerPoint, these features make Haiku Deck Premium still doesn't have the features of collecting audience feedback from other platforms. It also doesn't have a large library of templates to choose from, such as Slidebean. If you want to better understand audience behavior, it's worth considering Premium. Haiku Deck Is Missing Haiku Deck's iOS apps have intuitive and full-featured presentation tools. Then it is sad that there is no Android version of Haiku Deck. Most of the other systems we've looked at offer at least a demo viewer on Android. The mobile version of Google Slides may not be as upheay as Haiku Deck, but it works on all major platforms and could be better suited for those who want to do presentations on an Android device. What users think of Haiku Deck Haiku Deck customers find a system that is easy to use and very easy complaints about the lack of adaptation. Best PowerPoint Alternatives for Sales & mp; Marketing Presentations: Canva Canva is a design application that offers tools to build not only presentations, but also infographics, posters and almost all other types of sales insurance that you would like to do as a leave. The free-to-use service has all the basic options for building a presentation, along with collaboration features and a library of affordable partial images. Canva is great for sales teams who one-stop shop for presentations and other marketing material. Canva Pricing The free version of Canva provides 1GB of online storage space for your content. The Canva for Work package costs \$12.95 per user per month, making Canva one of the more expensive services we've looked at. To make an Enterprise release offer, you'll need to get in touch with Cava's sales team. Canva Tiered Features CanvaCanva for workCanva for businessPrilikiFree\$12.95/user per monthCall pricingFolders2UnlimitedUnli Templates 🗸 Transparent Background 🗸 Export as GIF 🗸 Priority Support 🗸 Administrative Controls 🗸 Team Cencing Plans 🗸 Dedicated Account Manager 🗸 99.999% Uptime Agreement 🗸 Free Functionality Level Ulaska, Free version is limited, It's the industry standard for the program to represent. By doing so, you still have access to all 8,000 canva templates, which is much more than PowerPoint offers. One GB of data is also minimal compared to the 15GB offered by each free Google Account. This could be good for test platforms or for simple one-off projects that don't require advanced features such as custom sizing or access to paid stock photos, making it a great option for individuals who want to use their own images in presentations. Canva for Work offers just \$1 for professional business content, such as support for external fonts, resizing, and access to all stock photos in the Canvina Library for just \$1 each. There are images that match practically a potential business usage case, with more being added every day. By comparison, PowerPoint offers only a small library of subpar artworks. The Canva for Work package lacks audience feedback features from other systems. Its cooperation tools are limited to internal teams who wish to participate in the creation of presentations or marketing materials. Nevertheless, Canva is an excellent design platform for all-in-one to create effective insurance. If you want an easy-to-use tool that allows you to greatly customize your presentations, then this version of Canva is worth it. Canva for Enterprise As its name means, Canva for Enterprise is dedicated to larger organizations. You'll need to contact their sales group to set prices, but this level is equipped with dedicated account manager and administrative controls that allow you to set permissions for which employees have access to features. It also has a 99.999 percent guarantee for uptime. PowerPoint does not offer such an uptime warranty. Canva for Enterprise does not offer concrete prices like other platforms, which can be confusing for many customers. It is also recommended for gather audience insights. Nevertheless, this is good for those who want to be committed to the account manager to see their needs when using the product. Canva Presentation Template What Canva Is Missing Canva's main advantage is that it allows you to create other pieces of content such as ads and social media graphics without having to use another tool. Its presentation builder is appropriate, but it does not offer animations and Google Slides. If you don't need to make sales insurance, these systems are a better choice. What users think of Canva Our readers say that the palette proposal makes it easy to design professional looks without being a seasoned designer. On the other hand, there are complaints that the search for templates has been screwed up and that navigation through the library of partial images can be slow. The best PowerPoint alternative for high-focused presentations: Prezi Prezi, which offers a free version, is a PowerPoint alternative that approaches a shared presentation nonconvenally. Instead of using slides that you use from start to finish, Prezi uses one very large canvas, which the showcase can then scroll to enlarge and enlarge the content. The software is great for companies that want to quickly change the focus of the presentation or highlight the key point on the fly. Prezi Prices You can use Prezi for free, but storage is limited to 100MB and your content is visible to all other Prezi users in their Public Gallery. Prices go from the Enjoy version for \$7 to top-tier, \$59 per month, Pro Plus plan. Prices are in line with other services that we have compared. Prezi Tiered Features PublicEnjoyProPro PlusPricingFree\$7/month\$59/month\$69/month\$60/ Control < Mobile App < Premium Support < Image Editing Tools < Offline Access < Advanced Training Public I free, edition of Prezi allows you to create and share presentations so how i would with PowerPoint. You can write, format, and insert pictures as you see turned on in your presentation. You can also configure animations between slides. However, unlike other presentation tools, the software is designed to easily skip or navigate content quickly instead of forcing you to scroll through a bunch of unnecessary slides. Like most other PowerPoint alternatives, Prezi's Public edition limits you to just 100MB of online storage. It also places all your content in the public gallery for everyone to see. It is not suitable for most business use cases, but it could be worth it as a free option to compile extremely basic presentations with non-sensitive information. Enjoy \$7 per month, you can keep prezi content private and access it either on iOS or app. Yhu Yhu Get priority support if you need help from a company that's better than what PowerPoint offers. This release is lower than a similar offer other than Google Slides. Unlike Google Slides, you can't cut or touch pictures in the app. To do this option, you'll need to upgrade to a Pro plan or above. Prezi Enjoy is good for small teams who want a central set of features to build presentations, and those that can edit images in another program. Pro For \$19 per month, Prezi comes with unlimited storage and the ability to work on offline projects. This makes it similar to PowerPoint, which allows you to store as much media as your computer can manage. You can also access image editing tools so you can tap the graphic before inserting them into the presentation. Unlike the Premium version of slidebean does not come with analytics features or external support for fonts. It also does not have access to the library of image stock, as with Canva. However, if your team is found to be making presentations with a lot of graphics, then it's worth a look. The Pro Plus Pro Plus is designed for larger teams and adds advanced, hands-on workouts from the company when signing up. The prezi staff will personally escort your team members through the functions of the system. Microsoft will not have the opportunity to learn PowerPoint. Prezi Pro Plus is one of the most expensive packages we've seen, and there are still things missing, such as the ability to gather feedback from audiences. Still, it's a very strong offer. If you want to save yourself trouble teaching all employees how to use the software, you might appreciate Pro Plus. Prezi Flexible Presentation What Prezi Lacks In the right hands, the prezi presentation can look fantastic. Unless you have a keen eye for design, but it's hard to do a prezi that doesn't look bloated and pointless. If you don't have the skills or care to use Prezi's nonlinear design, such as the usual Google Slide design, powerPoint-esque design is a better option. What users think about Prezi Users who are designers after the store love Prezi and the fact that it allows them to make presentations that go through a joint slide show. Regular business users, however, find a builder who is convolute and say it's hard to make good-looking presentations. Bottom Line Through the years, PowerPoint matches cheaper, sometimes even free offers, that allow you to make powerful presentations. The fact that all of these systems are cloud-based is also a bonus because you can create and edit content on any device. You can use Google Slides, very intuitive and have all the editing options you need to build an effective presentation. Real-time collaboration Presentation tools are very useful, and the fact that you can import templates from a third-party service is the best PowerPoint alternative on the market today. To get started, visit Google. Go to Google Google
