If you have large text files stored on your computer that you need for minimal links, it's a good idea to convert your .txt, .doc and .xls files into .zip files. Compressed data files are compressed data files that allow you to send, transport, email and download them faster (source: Win-sip). In addition, creating a mail file will free up space on your computer's hard drive, reduce download times when sending email, reduce the space in your email inbox, and encrypt and protect your sensitive information (source: Microsoft). Read the steps below and learn how to create a mail file in Microsoft 2007. Open the list of documents. Click the right button on the document you want to make into the .zip file. Move the mouse over the Winzip team in the label menu. Depending on the Microsoft version, the team will be formulated in one of a variety of ways. Select either Add a zip to the file or add to the archive. This converts your .doc, .txt and .xls file into .zip. Select Configuration in the label menu. This will allow you to control the enhancement settings, decide if the icons are displayed in the menu and what tasks you want the file to perform as soon as it is a .zip file. This step is optional. Keep in mind that you can always unpack your email files. Simply click the right button on the document and select an excerpt from the label menu (source: Microsoft). Also, keep in mind that you can always get support information from the Help menu if you have difficulty creating or retrieving .zip files. Advertising Featuring compression, sending a number of files at a time is easy. If you need to send a batch of files such as photos, documents or song files to someone, you can kiss the tedious process of waiting for a farewell. No longer wait for each item to finish joining the email and hoping that each of them can be successfully downloaded by the recipient. Just squeeze files into a zip code or RAR file and you're good to go. Sending qIP and RAR files is one thing, but how about when we get them on our Android phone or tablet? Do we have to wait until we return home to our desktops? Of course not. Thanks to new and more powerful applications, our phones can easily unpack qIP and RAR files to reveal their contents. What's even better is that these same apps can also pack multiple files into one neat qIP or RAR file. Get any file, whether it's a music file, video file, photo or document for other people in the snap. For people who need to send and receive files on the go, we've compiled a list of the best Android apps for qIP and RAR files. It's only natural that we start this from the official Win'zip app for Android devices. The app recently landed on Android a few weeks ago, but it is steadily making its way onto users' phones. You can get a file and view supported images, text and web files directly in the Win app You can even open open or AES256 encrypted files to securely view sensitive material while you work. Once you've unpacked the content, you can copy it to the clipboard and insert it into an email or other app. Winzip can automatically unpack and install APK files delivered as files using email files from the Google Play Store or Amazon Appstore. Winzip allows you to view different formats and allows you to open popular file types such as Word documents, Excel tables, PowerPoint presentations, and PDFs in third-party apps. Unfortunately, you can only compress files in the zip format with win'ip. Blackmoon browser file As it speaks on tin, Blackmoon File Browser is more than just an app qIP and RAR. It also allows you to view, open, rename, manage, copy, and delete files on your phone. This browser file will allow you to easily do a little household on your Android device. It is also able to recognize more than 100 file extensions and has several support files. You can rename files without getting confused. Blackmoon File Browser lets you view image sketches so you can easily distinguish your image files from each other. This certainly makes it easier to decide which photos you would like to pack into the qIP file. If someone sent you a qIP file, you can also use Blackmoon File Browser to retrieve the contents of the file. That's not all; Blackmoon File Browser also lets you create music playlists with Send Marked, and you can create jump points in any file or folder. Cipper Here's another app that will make it easy for you to select multiple files and give you an easier way to tidy up your files. The zipper, developed by Polar Soft, can also copy and move multiple files and folders. When you clean up in the spring, you can open, rename, and delete files and folders. Creating a file with a cipper is also easy. Drag multiple files into one folder and press the folder for a long time to bring the menu. From here, you can choose the name of the file, whether you want it to have the same name as the original file folder, or you want to give it a new name. You can also create split archives using a cipper, which can make sending very large files easy. Break the large file into more manageable sizes so that the recipient can unpack the separated archives and enjoy the full file without fear of intermittent connection. The zipper also comes with an image of the viewer, text viewer and SWF (Flash) viewer. You can also control files on your phone using FTP and [://www.://www.://www.://www.](#) This app is free and supported by advertising, but we believe it is a good compromise for such a powerful application. Total commander with overwhelming Ranked on the Google Play Store, Total Commander is a total crowd favorite. This Android app is a mobile version of the desktop file manager of the same name. It shows a list of all installed apps built in and a number of plugins if you want to have a positive effect Top. These plugins include a FTP client, a WebDAV folder and network access. Total Commander also has root support for its core features. Total commander gets in pursuit; if you delete something, it misses the Recycle Bin phase and goes straight to deleting the data. You can easily zip up files, as well as salt or corrupt them whenever you want. Looking for something? You can use total Commander's search feature, which works even for text files. If you don't want to ruary in your image files, Total Commander makes it easier to sketch for your photos. Once you have found what you were looking for, you can send files via Bluetooth (OBEX). Perhaps the best part is that Total Commander is free to download from the Google Play Store. Andro'p file manager of the organization of files on your phone is a bit difficult, especially when you just started learning how to navigate through it. If you feel frustrated about bugs when you're trying to tidy up your phone's files, then The Andro'zip file manager might just be the app for you. The Andro-sip file manager helps you copy, delete, move, search for and organize files and folders as you might on your computer. We have not forgotten that this list of apps is all about qIP and RAR file applications. The Andro'ip file manager supports qIP files, encrypted postcode, RAR, TAR, GIP and BISP2. It also allows you to send files via email. Don't worry if you have a bigger Android device because the Andro'ip file manager has been optimized for phones and tablets. The app comes with drag and drop functionality, meaning you can easily organize your files without having to tinker too much with the app's tools. You can use this app to back up apps and install APK app files on your phone. You can also manage your phone's memory and resources through andro'zip file manager task manager. For those of you who want to play safely and install your apps on an SD card, the andro-ip File Manager can be installed on your SD card without problems. ArchiDroid ArchiDroid calls itself an easy-to-use archive manager and based on user feedback, it certainly lives up to its name. ArchiDroid can unpack more than just RAR and qIP files; it can also unpack the archives of TAR, GZ,000(gz), BZIP2 (bz2), tar.bz2, tar.gz and 7th (7z). You can also unpack encrypted files protected by the qIP and RAR password. Do you have an RAR file that has been divided into several small and light archives? No problem, because ArchiDroid supports this, too. Let ArchiDroid have a go at it and it can properly unpack the multi-part archives. You can also easily create simple and postcode archives on your phone. The interface may not be too beautiful to look at, but ArchiDroid does its job no frills to distract users. If you want an app that is simple and effective, ArchiDroid can be the app for you. You can download ArchiDroid from Play Shop for free. The downside of Fx File Explorer trying to keep your phone neat is that the screen is too small. You can spend an hour or so squinting at the Android device screen as you order, rename and delete files. Fortunately, there is an app that makes navigating and arranging our phone's files a breeze. Fx File Explorer, developed by NextApp, Inc. has features like multiple windows, so you can quickly switch between different places. Multiple elements are easy to control with an intuitive File Explorer napkin. Select multiple files by swiping your finger over the file icon, from left to right or right to left. You can also use this swipe gesture for sticking files. You can cut, copy, paste and remove using a clipboard. You can also use text File Viewer, Text Editor, Binary (Hex)Viewer. What the file tester and manager will be Fx File Explorer will be without The Tzip, Tar, Gyp, and BCIP Archive Extractor and Creator. The Fx File Explorer also comes with RAR Extractor. Explorer's File Manager Here's another file manager that is no-frills and easy to navigate. The Researcher File Manager is a practical, no-frills file manager for your Android device. You can browse your device's files and folders, and if you have root privileges, you can also browse the root and hidden system files available on root devices under the privileges of su. Of course, you can do standard operations such as cut, copy and paste files to keep your files in order. You can also rename, delete, or make a new folder. Viewing files is simple because the Explorer file manager can show you a file's thumbnail, its file name and size. Is the font too small for you? Instead of reaching for your glasses or magnifying glass, you can easily set the font size and row size for file lists. If you need to send something to someone, you can easily email your files. Someone sent you a qIP file? No problem. You can easily unpack, CEP, GCIP, and RAR files.ES File Explorer Files Manager hailed as one of the best tools in the Android market and support 23 languages, the ES File Explorer file manager just had to do it on our list. You can select multiple files to move them around, as well as perform basic copying, cutting, paste, deletion, renaming, and sharing functions. The app allows you to view different file formats for photos, documents and videos, and supports third-party apps such as Document To Go to open document files. Viewing APK images is now easier with sketches. Root users can enjoy root which gives users access to the entire file system and date directories, as well as changing the file-imamining permissions.ES File Explorer, which also allows users to compress files into a neat file and create encrypted (AES 256-bit) files. Naturally, you can unpack the archives and unpack the RAR files, as ES File Explorer file manager for free from Google Play Store today. The Astro File Manager/Browser developed by Metago, ASTRO File Manager/Browser not only makes it easy to select multiple files that you want to combine into one zip code, but it also allows you to view and organize all files easily. Once you've removed the contents of the qIP or RAR file, you can easily put those files in the right places by dragging and dumping them. All the features you'll ever need are at the top of the screen in portrait mode or on the left side of the screen in landscape mode. Just cycle through them to access the features you need. If you have a tablet and you haven't upgraded to Android 4.0 Ice Cream Sandwich or Android 4.1 Jelly Bean, then you'll be happy to know that ASTRO File Manager/Browser packs Honeycomb support. The ASTRO/Browser file manager can be downloaded for free from the Google Play Store, but supported by advertising. If you want to support developers and remove ads, you can purchase the ASTRO File Manager/browser pro version. You no longer have to wait until you get to your desktop to send and receive qIP and RAR files. You can easily retrieve them right on your Android device. Do you need an album of photos or a few songs from your device? Simply select the files they want and pack them into the qIP or RAR file using any of the apps on that list. If your favorite qIP and RAR app is not on our list, let us know what it is by leaving a comment below.
