Cara mengatasi keyboard error hp android

Continue

How to solve Android keyboard errors – Keyboard is one of the most important apps on Android smartphones. Without keyboard apps, we can't do much. We can't send SMS, send WhatsApp messages, status updates on Facebook, and there are many more things we can't do if the keyboard app doesn't exist. Therefore, if the keyboard application on Android smartphone experience an error will make it very difficult for us to use the smartphone. Just like other apps, keyboard apps can also run into errors. Here is a common error in keyboard apps on Android smartphones: Android keyboard missing (not displayed)Android keyboard suddenly stopKeyboard and Android can't use Android Keyboard force lockKeyboard android android error other is the keyboard on your Android smartphone that has errors like above? Take it easy, Androbuntu.com this time will talk about how to handle keyboard errors on Android smartphone. 5 Ways to Overcome Android Keyboard (Not Displayed) 5 ways to overcome Android keyboard errors can be applied to any Android brand smartphone, from Xiaomi, Sony, Samsung, LG, Advanced, Asus, Lenovo, Opo, ZTE, Evercross, Meizu, and other brands. 1. Keyboard App Cache keyboard apps that are errors on Android sometimes caused by these trivial things, the one that is because the cache has been accumulated. If the cause of the error is because of the cache that has been accumulated, then the way to handle it is very easy, i.e. by clearing the cache. The keyboard app cache on Android is also very easy. You can do this without using additional apps. Follow the way below to clear the Android app cache: Go to the Settings menu > apps > Keyboard > Clear Cache. to finish. Then try opening an instant message app, usually the keyboard app that was previously unable to use again. 2. Clear Data App Keyboard If the first way cannot solve Android keyboard errors on smartphone, you can use this second way. This second way is also quite simple to do. Apps sometimes become mistakes because there's already a lot of data picked up. Similar things can also happen to keyboard apps. Well, to solve it, you can delete the keyboard app data. Remember, deleting data won't delete your app. So it's very safe to do. To delete keyboard app data, follow the path below: Go to the Settings menu > Apps > Keyboard apps > Delete data then try using your keyboard app again to type. 3. Force stop the App Keyboard the third way you can overcome errors in Android keyboard is forced to stop the keyboard application. How to defer keyboard apps force you can follow as below: Go to the Settings menu > Apps > Keyboard apps > Force Stop 4. Restart Smartphone If the above three ways can't solve keyboard errors in your Android smartphone, then it is good to try this 4th way, namely by restarting the smartphone. This method also is often done to resolve errors in other applications. And it's usually working. 5. Download Other Keyboard Apps on Google Play If above four ways still can't solve keyboard errors on your smartphone, then maybe it's time you use another keyboard app. There are quite a number of keyboard apps that you can download on Google Play, including SwiftKey Keyboard and GBoard. To download the keyboard app on Google Play, open Google Play and go to the Productivity tab, where there will usually be a lot of keyboard apps. Then download the keyboard app you like the most. At conclusion, there are 5 ways you can solve errors in keyboard applications on your Android smartphone. In all 5 ways above, you can use your smartphone as usual. Can send SMS, WA, and last statue again deh. If there's something you don't understand yet and you want to ask you something, don't hesitate. Ask us by email or via the Androbuntu fan on Facebook. See you in the next article. Home » Gadgets » HOW TO SOLVE KEYBOARD ERRORS ON HP ANDROID HOW TO SOLVE KEYBOARD INPUT LANGUAGE ERRORS IN A previous post, I talked about How to solve keyboards/keyboards not displayed on Android Phone/Samsung Tab. After the keyboard appears, there is always a problem that the language input is error or doesn't match the original keyboard/default of the phone. On this occasion I will try to share overcome above, hoping that can help colleagues who are having problems like me. This keyboard input error is usually characterized by the absence of some keyboard keys that do not work, the order of the keys – keys are changed. Although the arrangement of letters is still fixed (QWERTY) but the other keys – other keys that change like the Del button, enter, the keys are changed to numbers. It's not actually an error but a change to the keyboard input. Basically the keyboard is an app, which is biased to be replaced or changed by the version. We can even download the keyboard app. But since we are familiar with the factory keyboard built-in, then when the keyboard application is replaced with another template it will feel weird and we often say mistakes. Before we say error, let's first try the steps I'll share in this article. The first thing we do is to go to the message menu, browser menu, bbm menu or any menus with the keyboard problem / keyboard displayed. After the keyboard is displayed, we see at the top of the screen, usually near the signal indicator there is a small keyboard image / keyboard (circle in red). Just click the image or drag it down, then click Select Insert Method. Next choose the method according to your Android phone. If the hp is samsung then select samsung keyboard, if Hp Opo it then choose input method for Opo. So just customize it with your own mobile brand. The input method I sample above is for Hp to Opo.Si no proper input method displayed, try selecting an existing method. If the error always means the keyboard app does not match or delete, you will need to search again or download it. Clear the old or present keypad that always exists are often broken and can even be removed, and that is very difficult to fix. Unlike now the presence of Android smartphones and tablets certainly decreases damage to the keyboard or keyboard because it now comes with touch buttons. Keyboard keys and touch screen modes are true easier to make daily activities such as SMS, chatting, writing notes, browsing and others. If there were also any damages or problems on the Android keyboard of course it very disrupts your daily activity. And usually it is caused by junk files or the loss of some keyboard executable files that make the keyboard issue. For example it happens as this Android keyboard has stopped. Well, it is usually caused by corrupt on program files or junk files that have never been deleted. But taking it easy, the problem can be addressed easily and quickly. Try following some simple methods below... See also: 5 Ways to Solve Gboard Was StopedFixing Android Keyboard Keyboard ErrorTo fix Android that error should first enter the system keybord section then clean junk files or caches that interfere with the running process of keyboard applications. Here are the steps. First, go to the Settings menu, then select Application. Then find the keyboard application you are using E.g. Android keyboard (AOSP), then Clear Data and Clear The Keyboard Application Cache. Fe.See also: How to clear Realme CacheHow overcome Android keyboard stops is quite easy to do, just enter on the Download application on your Android, then disable and allow it for the app to run normally again. Here are the steps. Go to the Settings menu, then choose Apps or Apps. Next look for the Download Application Manager, then disable and enable it. Restart or reboot your Android phone. Do.See also: 11 Application Download Manager PC > Mac's Best1. Keyboard cache additionally in some of the above methods, you can also clear the keyboard application cache. This is very possible in solving keyboard error problems even if it crashes. Cached files themselves usually have the best function of opening an app or accessing files with plenty of time. But cash files also need to be deleted and updated. And to do this, you can check out the below steps. Go to Settings » Apps » Notifications » Select Keyboard APP NAME » Repository » Then type Clear Cache. See also: How to clear Huawei CacheMore, you can also try to stop the keyboard application by force. When your Android keyboard crashes or lags then this method you can do, this will stop the application from being forced close. And you can reopen later and hope that there won't be any more problems. Go to Settings » Apps & Arts Notifications » Select KEYBOARD APP NAME » Then type Force Stop.3. Deleting DataHapu keyboard data can also be the best option when the application does not work or an error occurs. By deleting the data, all configurations and settings of the keyboard application will return to the default position. Therefore you will make adjustments related to the keyboard application. To do this, you can check out the steps below. Go to Settings » Apps & gt; Notifications » Select Keyboard APP NAME » Storage » Then type Data key. See also: How to Delete Xiaomi App DataIf in the way this Android keyboard always occurs errors, you can download app keybord in Google Play for free, the app named Google Keyboard and SwiftKey keyboard. If you have already downloaded 1 of the 2 apps, Install and enter the menu settings » Language > Then select the keyboard application you just installed. In addition, there are some keyboard applications that I want to share that you may need. This app I share next is the best Android keyboard app, lightweight, free, and full featured.1. Go keyboard is the best Android keyboard app no #1 on Google Play Store. The app provides interesting features, one of which are emoticons, emoticons, and themes. With a theme of course The keyboard will be much more fashionable and cool. To try it out, please download this app via Google Play. [Google Play] [App Store] 2. Smart Keyboard is a smart Android keyboard app with links from Developers Dexilog, LLC. The app has interesting features such as multi-language options, port options, voice input, Costum Auto-Text, Calibration, even smart dictionaries. As the name suggests, this app is all good designed as a smart keyboard app for smart people anyway. [Google Play] [App Store] It's a lightweight, simple, and unique Android keyboard app. There are many funny and cool emojis that can become your daily friends as a complement to chat writing, status, PM, and more. There are hundreds of beautiful and unique emojis that you can use for free. [Google Play] [App Store] 4. Kika keyboard is an Android keyboard app that is fun, fun, and fast when used. You will get a new experience when using this app. Besides Emoji, there are also thousands of themes and fonts that you can use to your liking depending on your comfort. It is supported by 60+ languages in the world, including Indonesia. [Google Play] [App Store]etc..... In Word, Every Android user has different problems, so I cannot guarantee by doing the above way can succeed as you want. It's better to try the road above one by one and hopefully it can work with no mistakes. If you have anything to ask, just write it in the comment field below. Thank you and good-beer!!
