Will you camp in a forest or back to the country where winter has spread it white touch everywhere? If so, then the Coleman Exponent Multi Fuel Stove can be your great companion, as it works great at the coldest temperatures. This winter's camp stove was built by the prestigious Coleman company. We have dedicated this detailed review to this Coleman camp stove. Hope it helps! Coleman Exponent Multi-Fuel Stove Multi-Fuel Stove: When questions come to buy an outdoor stove, fuel problems matter significantly. Fuel availability is uncertain, when you are hiking, trailing and camping in a forest, desert or anywhere in the agricultural zone where you can hardly find a shop. So it is better to go for a camp kitchen that works with more than one type of fuel. Thanks to Coleman for providing plenty of fuel to use the feature in this Coleman camp stove. It can use Coleman fuel, diesel, unleaded gasoline, kerosene, etc. You can use any of these fuels depending on the budget and When you buy this device, it comes with kerosene generator. Precise Heat Control: Although a camper stove is not a perfect tool for cooking a large dish, this Coleman multi-cap fuel kitchen can help you cook meals to keep you healthy and strong after a long journey. In our field test, we found this stove can generate about 10k BTU heat. However, the exact temperature level depends on what you cook / boil. Then came the need for temperature control options. We would really appreciate the flame control feature of this Coleman Exponent Sove. You will find a mounting handle near the top of its fuel box. It aims to control the power of fire. So you can increase and/or lower the temperature/heat level exactly depending on what you are cooking/boiling. This Camp Coleman stove can boil about a liter of water for five minutes. Few camp stoves out there can give you such great flexibility. Integrated fuel can: Coleman Exponent Multi Fuel Stove carries a circular integrated fuel can. The burner is fixed just above this fuel can. And the legs are attached to the bottom of this tank. Therefore, this fueler has the central part of the total number of Coleman Stove units. You will find a hat hole aimed at spraying fuel. You can easily pour fuel inside this integrated tank placing a funnel inside this hole. It can hold about ten ounces of fuel with a combustion time of twenty minutes. This integrated tank is also subjected to a valve to control the amount of fuel used as well as adjust the power of the flame. Besides, you will see a knob on this fuel tank, which can be used to pump air inside the tank. This built-in fueler is sturdy enough to provide balance to the entire device. If you fill this integrated fuel can once, then you can run this Coleman Camp Stove for all weekend. Easy lighting: Lighting the kitchen is the most important cooking step. Imagine a situation where after a long tiring day of trailing and hiking, you're too tired and ferociously hungry. Then you unpack your camp stove and arrange to start a fire. But after much effort, the fire did not begin. So what are you going to do? To avoid such situations, Coleman provided easy-to-light features for this Coleman Exponent Multi-Fuel Kitchen. Remove the lid from the fuel hole, place a funnel there. Then pour the fuel into the tank. Your kitchen is ready to work. Now use the flame control valve to control the fire and get the correct heating to boil water or cook food. You can pump air inside the tank using knobs, depending on the need. You can read instructions for operating the process properly in a shorter time. Compact design: This Coleman Exponent Multi fuel cooker carries a fashionable look with a nice combination of gold, silver and black. The silver stove is fixed above the yellow integrated fuel can. Has a silver ring structure adjacent to the kitchen surface. It serves as a windshield and saves fire from the wind flow. This ring surrounds five support pots attached to the burner surface. The middle part in the gold gold feature The built-in fuel bottle carries a hole, a valve and a knob for fuel pumping, fire control and air pumping. Near the bottom of this integrated tank, there are 3 foldable plastic legs that are firmly fabricated. Put simply, all these parts are attached to each other and come as an all-in-one unit. This Coleman kitchen weighs about 2 pounds or 21.6 inches (H) x 5.2 inches (L) x 5.2 inches (W). This comprehensive compact design makes this camp kitchen easy to carry and store for campers, wherever they go camping. Perfect for winter/windy weather: In summer or spring you can try any outdoor stove run by butane or propane. But this becomes quite difficult when the temperature drops near or below 0 degrees Celsius. They work as a windshield and serve quite well to protect the flame from the impact of the wind. However, if the wind current is too strong, you can use the additional windshield for effective heating. Besides, it works more efficiently in normal weather. In fact, the Coleman Exponential Multi Fuel Stove is perfect for all weather conditions. Brand reputation: W.C. Coleman initiated the proud history of the Coleman industry in 1900. By the time process, it has begun to produce a variety of entertainment gears suitable for outdoor use, such as, tents, outdoor furniture, outdoor sleeping bags, backpacks, etc. Coleman has brought innovative design ideas to the camp kitchen, which has made camping life much safer, easier and more enjoyable. Considering their rich heritage in kitchen production, we can allow Coleman to 'grandfather' the kitchen builders. They have integrated advanced technologies with practical problems to build friendly and reliable camp kitchens. Coleman Exponent Multi Fuel Stove also maintains this legacy and has received admiration from consumers. Product testing time: We can't say this for most of the products we review. Coleman Exponent Multi Fuel Stove is proven by time testing. For nearly twenty years, similar models have been serving campers. This Coleman Exponent model was launched around 2007 or earlier. During this long journey, consumers are very pleased with the performance of this Colman Camp stove. During camping, it is not a good idea to try a new model built by a new company or medium level. Instead, you can get a reliable product built by a reliable company, which can guarantee you a much more reliable service. From this perspective, we recommend this Coleman Camp Stove for adventure camps. Allows the use of a variety of fuels, including kerosene, gasoline, Coleman fuel, diesel, etc. suitable for all weather conditions, including winter, wind, etc. Compact design. Built-in fueler. Built-in windshield and pot support. Plastic aluminum legs. Easy to light. Trusted brand. Affordable. Affordable. suitable for backpacking. Not suitable for indoor use. More expensive than the average backpack stove. Read, Best Backpack Kitchen Review 2019. Coleman Exponent Multi Fuel Stove is one of the reliable camp stoves available on the market that has been serving detainees for a considerable period of time. It is a product of the reputable Coleman brand. From top to bottom, the whole kitchen comes like an all-in-one package. Coleman Exponent Kitchen is easy to store for campers. That weight can be a bit cumbersome for backpackers, but it's suitable for campers. It's a fuel-free system and easy-to-use features that make camping life fairly easier. The effectiveness of this camp stove is really worth asking for the price. If you want to buy a durable and reliable camping stove under the economic range, go for it.
