Label: Examine the outside of the eye. You should be able to find the sclera or the white of the eye. This tough, outer cover of the eyeball has fat and muscle attached to it 2. Locate the cover above the front of the eye, the cornea. When the cow was still alive, the cornea was clear. In her cow's eye, cow's eye, Cornea can be cloudy or blue. 2. Cut away the fat and muscle, this may only be necessary if fat covers the cornea of the eye and is in the way. Grease around the back of the eye can be left alone. Turn the eye around to find the optic nerve where it exits from the butt of the eye. It will be stronger and more rope-like than the surrounding adipose tissue. 4. Use a scalpel or scissors to make a cut in the cornea. The cornea is harder than it seems and may require some strength to puncture, be careful when using the scalpel. Once the cornea is broken, clear fluid will leak (or squirt) – this liquid is the aqueous humor. 5. Quick control: External tunic A. The white of the eye is the continuous with (A) is the

found on the front of the eye, is the What is the name of the nerve on the back of the eye? 6. Use a scalpel or scissors to make a cut in the sclera so you can cut around the outside of the eye. Their goal is to separate the eye into one front and one back half. 7. Separate the inner parts of the eye. The gelatinous liquid in the middle of the eye is the vitreous humour, which will also contain a hard, spherical lens. Find the cornea (which you pierced in step 1) and then the disc-shaped iris behind it. The iris will be dark in color and contain a center opening, the pupil. 8. The image below shows how each part of the eye appears when it has been disconnected. Take a photo of your own eye and share it on social media. #coweye (optional) 9. The back of the eye has two layers, a very thin layer of cells that is easy to scrape off (and can fall off by itself), which is the retina. Behind it is a blue, reflective layer known as tapetum. 10. The retina converges at a point on the eye where it connects to the optic nerve. This is the optical hard drive. It can be easiest to scrape off the retina and locate the place where it remains tightly connected. Turning the eye will also show how this spot lies directly in front of the optic nerve. 11. Label the Cow Eye (use your book or other resources) resources)
