For more information, see our privacy policy.× thank you for the interesting in our services. We are a nonprofit group that runs this website to share documents. We need your help to maintain this website. To keep our site running, we need your help to cover the cost of our server (about $400/m), a small donation will help us a lot. Please help us share our services with our friends. No artistic/aesthetic changes please! We are only interested in updating content and corrections, or updated images that show new menus or new features. If you're hoping to jazz things up or re-do epub styles to reflect your personal style or formatting preferences, you'll probably be disappointed. Pull requests, which include stylic changes or upgrades, will be reduced (unless such a work is although although pre-approved). Less is better. A few smaller, tightly focused drag requests are always going to be preferred over large representing ones, sweeping changes to large swathes of manual. We don't want to read all manuals every and every time we are evaluating new stretch requests. You too. Be considerate if you want to see your efforts incorporated. Don't break anything. Changes that break the resulting epub or cause validation issues will be rejected. It is your responsibility to make sure that the epub structure remains intact and the specifications are consistent. Fatten this repository into your Github account and clone a local copy of it into your computer. Use the FolderIn Sygil plugin to load the contents of your local directory src, cloned repository into the sygil. Do your editing (save changes in a temporary local epub somewhere if you should). Remember to use Mend and Prettify after you're done, and always make sure the epub validates without errors. Then when ready, save the contents to your local directory src, cloned repository using the FolderOut Sigil plugin. Use the normal gate tool to check your differences and then when satisfied, commit and push your changes to your Github knife. Create a new drag request from your Github account so that we can review and hopefully pull your changes to the project. Starting your review of the Sigil user guide ×Satisual to discontinuing the ERROR CSS SIGIL EPUB Editor can help you to achieve a worthy and satisfying goal to self-publish your book. SIGIL editor is free to create an EPUB file for your book. It explains the benefits of creating EPUB, identifying some of SIGIL's key features, provides details about SIGIL support and downloads, and how to use the SIGIL EPUB Editor for your self-publishing book. I have been using SIGIL for almost two years now and I think it's a really good option. Why would you want to create an EPUB file? An EPUB file is a typical zip file that contains many files (such as text, style, images, audio, video, etc.) that define your book. EPUB is the key international digital publishing forum standard (IDPF) (currently version 3.0.1). It's important for four main reasons: it's an internationally recognized standard used by many ereaders, tablets and mobile phones. Your EPUB file can be viewed to Smashwords for confirmation and sale, and for distribution to Apple iBooks, Kobo, Barnes & Noble, Baker & Taylor's Blio, Kobo, Oysters, and Scribd for sale. By converting your EPUB file to Mobi format (using a preview) your book can be viewed to Amazon for confirmation and sale. You avoid the somewhat frustrating process of preparing Microsoft Word documents that would be acceptable to Amazon and Smashwords. Siggil currently supports EPUB version 2 and parts of version 3. Key features of SIGIL EPUB editor (why I like it) SIGIL offers: free stable multi-platform development environment; Support for EPUB 2 and parts of EPUB 3 specifications; Very, very. Knowledge threshold in order to prepare EPUB, supported by excellent user guide (Google SIGIL user guide for the latest version); and toc.ncx files (thank God); Opportunity to prepare more advanced EPUBs by inserting images, video and audio files; A summary of SIGIL features can be found here. How to use SIGIL to self-publish your book note: The following discussion is an overview and is not intended to provide a detailed step-by-step guide. The excellent Siggil user guide does it well. So for every step I will do in the SIGIL process there will be a section in the user guide. The process I use is: prepare a complete mockery (including text, hyperlinks and formatted images) in Microsoft Word. This enables me to: visualize how the book will look when finished. Share the book with my review team in a format where they can embed comments. Create and save a new ePub file in Siggil. Bring all prepared text to Siggil. There are a few ways to do this: save your MS word file as a text file or as an HTML file and upload the file to Siggil. Siggil has a chapter on how to prepare your file for Siggil. In fact they recommend saving your file as an HTML file or a text file, Siggil will open an HTML file directly and will become a text file. When I first started publishing my own I was using MS Word to prepare and send my files. It was so boring. With Siggil I'm using a different approach that ensures I have the cleanest HTML possible: quite simply I copy and paste text from MS Word into Siggil. I will add a new text file in Siggil for the title page, copyright page, introduction, each chapter, every appendix, and back end material for our other books and in our case. Once this is created I can copy text across from MS Word to Siggil. This approach enables me to perform final text editing, and confirm hyperlinks and image specifications importing any images into the sygil. Add a CSS style sheet. Examples are available in BB ebooks. In fact I bought Paul Savette's guide to book design and development to act as my reference text. Link each text file to the CSS style page. Format any text file: Add headings; Italicize, underline or bold the corresponding text; insert relevant images; and add any necessary hyperlinks. When you use Siggil for the first time you will probably work on book views. However as you gain the confidence and expertise you want to View. Add the book metadata. Add your cover. Be grateful that Sigil automatically creates content.opf and toc.ncx. Validate the EPUB file inside SIGIL using FlightCrew; and CSS file with W3C. Epub file credit with external EPUB credentials. This is essential as Smashwords demands compliance – this is good. Save the file periodically during the process. Prepare separate EPUB files for Amazon and Smashwords. The front article (title, copyright etc.) and the back material (in our case and other books) will have different specifications and links. For example, you can't promote your Amazon links inside Smashwords and vice versa. There may also be differences in css mail style. Convert EPUB Sales to Moby format with ignition preview. It highlights any errors. Book testing is available on ereaders (as such as Kindle or iPad etc). Sending the relevant book to Amazon and SIGIL Smashwords details the EPUB editor for a time it seemed like developing SIGIL as programmers picked up stagnant. Lately though the situation seems to have changed and future directions are being planned. I am so happy that SIGIL has earned a new lease of life. SIGIL home is here. Discussions about SIGIL can be found in the MobileRead forum. Google SIGIL user guide to find the latest version of SIGIL user guide. SIGIL can be downloaded here. If you invest in these resources you will soon learn how to use SIGIL to self-publish your book. Conclusions are easy to become very comfortable in the SIGIL environment. You can use SIGIL at a technical level with your abilities. There is no need to become involved with HTML code unless you choose to do so. However, your ebooks can be enhanced if you choose to embrace the technical aspect. I trust this provided you with the necessary guidance on how to use SIGIL for your self-publishing book. Go on, you'll be surprised. This is a link to all of our self-publishing tools. This is a link to all of our self-publishing books. .
