Grant Morrison is one of the greatest writers of the time. I wish I hadn't come face to face with him? Stan Lee, therefore, and the lover of myth is in his own way, a lover of wisdom; and the myth is made up of miracles. Aristotle, Metaphysics, 982b When the translation of this curious text was published last October in Spain, the self-styled comic book specialists have already read it in their original English edition of 2011 and exquisitely reviewed on their respective blogs. So, it seems that Morrison tells in the first third of the book, as specialists in superhero literature who already knew him well, but since I had only a small idea, I learned and enjoyed what counts and by the way, says everything very old, sociological, spicy and colorful. Morrison then introduced himself to history, but it can even be justified, since I think the route that a maniac arrived (who became one of the most respected and best-paid writers today) can also be a symbolic part of American the's history. In addition, his reviews of authors and collections are subtle, since he understands that what may not be seen well like this can be seen differently, or vice versa (this suits him anyway, because he talks about the publishers for which he works), so the writing interesting, lively and modern, often up-wrong and alternative, always somewhat annoying and ironic, as befits the environment, but admired in general terms. A lot of titles and things I didn't know, but I'll know they've accumulated in my virtual library, it's constantly growing, which is where it accumulates everything I still have to read. I'm sure there are more intellectual ways to glaeen them, but not as exciting as the one in the personal chronicle. Grant Morrison is a bit of a prick (anyone can check him out in the self-made that he either does it like a cool YouTube superstar), but you have to admit that here you know how to do it. While his historic journey doesn't match the work of Alan Moore - the British man like him - the Comic-Con Messiah, who can't disguise that reverence but whose paternalism he seeks to kill, in oedipus complex mixed with that of inferiority that makes his complex truly complex - Freud plus Adler nothing less. Of course, it's completely useless: Moore ignores this gamble, as Galactic hits the Thing, and besides, he would never be humiliated into writing confessions (when he had the opportunity to do so, in The Voice of Fire, he simply described in depth his birthplace, Northampton). Neil Gaiman, more grateful, often says that the first thing you need to know about Moore is that he's a genius; if such flattery is true, the second is that it is, and that Morrison has reason to want to shake off its suffocating influence. Grant Morrison with his friend Damond The worrying thing is that around p. 100. That's all he writes in the book, in the end- That's how Ron Hubbard is going to start, so he wants to sell us a new Church with him as a High Priest, some of these specialists have thought. But the vision is diluted and again told about the comics, theirs and his loved ones, gradually more tempting to offer us philosophy, philosophy, so to speak not of the Son of Man, but of the Son of Superman. Therefore, he comes to say that we are already Superdios (the original subtitle is Our World in the Superhero Era, so the book's calling is that of the pronomy of the Spirit of Popular Culture) if we take our gaze from mortality and design it for life on Earth, conceived as pseudo-great Renaissance animals Like Infection. Men, especially, have developed a series of prostheses (the terms of the explanation are mine) that give us effective paragonal superpowers of Superman, and therefore it is not uncommon that as a species, we are completely Superman, or at least Clark Kent will open his shirts. Because Superman is a saint, the paladin of all virtues, and we obviously are not, or are not yet... Morrison's philosophical suggestion is to accept a pragmatic criterion that, as Jodie Foster said in Contact, the world is not or does not cope, but as we do, so if we take Superman as a divine measure of man, it makes little difference that he was the man who created Superman because - once turned into fiction - fiction is bigger than us. Maybe Feiebach would be proud of you. Spinoza, who argues that atheism is not a metaphysical question, but an ethical one, and that therefore, philosophically, only philosophically, there is also God saving the vast distances. The strategy of not mixing the question of Superman's nature with his human genesis - that is, the knowledge that Superman was asked by us in two dimensions is not about him theoretical difficulty, but a greater foremanic evidence that we harbor in us this ontological potential in five dimensions - reminds Rainer Maria Rilke of paragraphs from the famous Letters to a Young Poet when, in the sixth letter to Capus, at the beginning of the twentieth century, he wrote: Why does he not think better that He is the One who is yet to come for eternity: The Coming, the supreme fruit of a tree whose leaves we are? What prevents you from projecting His birth into the days to come? And what deprives you of living your own life, how will you live a painful and beautiful day in the long history of a mine preñez? Can't you see that all that always comes up is a start? And can this not be His principle, for everything to begin is in itself so beautiful? If He were the Most Perfect, wouldn't he prefer Him forcibly so that he could choose His own being from ity to abundance? Doesn't He have to be the Last one to be able to embrace everything within Himself? What if he we long for was already?... Just like bees sand and collect honey, so we extract all the sweetest to build it. We can start it as soon as possible. With the least presence: as long as it happens out of love. With work and then with rest. In silence. With a little lonely joy. With everything we do on our own, without participants or followers, (a) He we will not know, nor could our ancestors know us. However, those who have passed so long ago are still inside us. Like a deposit, an inheritance and a foundation. Like a burden that weighs on our destiny. Like the blood that explodes, and seems to rise from the depths of time. Is there anything that can take away the hope of ever burying him, which is the furthest away, the Supreme?... Of course, paper and cellulite superheroes, as they are born, sometimes die as the ancient deities were born and died, but all the gods are resurrected, and every god is exactly the heredity of the gods. And the funny, gregarious, vulgar fans, even less. He loves the grandeur of the cosmic superhero that irreversible cultural mimi possessing Hegelyan social objectivity, and he himself is held by a kind of wizard (a wizard of chaos, like Moore, although he assumes that he was before him and alone), which is almost normal because, as an archaic aedios, he builds gods, narrate their stories... In short, the criticisms that can be made to him are, predictably, those of ever: Superman, and others are ethnocentrists, often wae, are a lucrative business, inhabit apolitical lindro, etc. To which one observation can be added - I do not know if the criticism - more, Morrison mentions the word gnostic without giving it exactly meaning. Gnostics, as Hans Jonas taught, believe that Christ is a kind of reflection of the true God, the one who is above the evil Creator of the world, and, later, a Man who carries within him a divine spark. This saving knowledge is precisely within a few initiating ones who face this world from above, and I fear that the shots of these funny onions killed on an elegant and sadly comic gospel rather if he was culturally familiar with it, which, in any case, I recommend...
