

I'm not robot

Continue

Note: Soon we will update this article because Google has just released its new version of Android called Android P or Pie. Update android for its oreo version for mobile and tablet. Download the latest version of Android for Samsung, BQ, Huawei,.... How to update Android OTA. Android is an operating system that is integrated into many smartphones and tablets is most common well above other operating systems, such as Windows Phone or iOS, iPhone. To better understand how a computer can perform, such as a Windows 10 operating system, smartphone or tablet that can perform installed Android. Several aspects motivate it the most common operating system: platform stable, many applications, constantly improving, Open Source (allows manufacturers such as Samsung to change the interface or certain modules to customize them to their devices),.... It is highly recommended to update your mobile or tablet every time a new version of Android appears, because it gives us some advantages, which we will explain later. Downloading the latest version of Android is very important so that our phone or tablet is not out of date. In this article we will provide a guide on how to update our device's Android operating system, in which we will find several ways to update Android Software. Why update Android? Since we get great benefits and benefits for our mobile or tablet, summarized in the following points: They correct bugs from previous versions and get more security. Improves the performance and stability of our device without spending money. This provides a lot of battery saving. We will check that it increases the speed of the processes to be performed. It includes new features, improved capabilities and changes to the interface. Make sure that any app will work on your mobile or tablet. It takes an update of the operating system, in our case, android, to make the device compatible with all installed applications. How to find out which version of Android I have on my mobile phone or tablet. What is the latest version of the Android. To see which version of Android we have on our terminal, we should go to Settings and touch on the phone in the case of a mobile phone. In the case of a tablet, you'll need to go to Settings and click About device. There we will check what our Android. La the latest version of Android is Android OreO, on your device you should see Android 8.0, if not, which means that your device is not updated. As an update Android. It should be noted that manufacturers usually take some time (months) to customize the updates that Google is removing from Android, except nexus or pixels, which we know there are Google devices and the update is practically instantaneous. First, before you start updating, we recommend backing up your contacts, photos, videos, and other files so that you don't lose them. Android update does not necessarily lead to the loss of all this data, but it is advisable to make a backup if there are any process failures due to loss or shutdown of the connection due to battery shortage. Note: When you upgrade your Android, we recommend that you connect to a Wi-Fi network and have a 100% battery or connect it to a power source. Now let's look at the various methods we need for the update: Official method (OTA – download and install software wirelessly). The official method is the simplest. You will need to access Settings, enter phone information or about the device and click System Updates, Manual Download, Auto Download,.... Usually our phone automatically searches for updates (this is the option chosen) and when it sets ota (Via air - wirelessly) on the manufacturer's server, we will skip the system message informing us that there is a new system update, we click yes, I want to update and after a while and restart we have already installed the new version of Android. We, under System updates, click Check for updates or Manual download to verify that the manufacturer has released a new update for our device. If so, we will only have to download the update, accept the terms and conditions and install it. But what if my mobile model does not show the latest version of Android than I have the option to upgrade? Why? As mentioned above android is an open source that allows manufacturers to customize it to their mobile models, the updates that Google releases from its Android operating system are late or do not reach our mobile model, because it is the manufacturer that decides whether to customize it or not. until we stop getting them in a couple of years. This is what is called obsolescence programmed android software terminal and it means that the manufacturer will not give us more support in terms of new versions of Android and in this case we have three options: We have three options: We have a mobile phone that we have and hold with the latest version of Android that the manufacturer supports (applications basically do not cause problems, because they take several years to stop compatible with our android version and when we already see compatibility problems with applications to switch mobile

recommended option-)
Buy another mobile phone (top model) that if you can have the latest version of Android (logically, if we can afford it -we have to weigh the cost-...). We recommend that you read the last part of this article to see the models whose manufacturers have updated the latest version of Android or another option that we went to create and explain: Update Android manually. Download the latest version of Android. Update for Android Samsung Huawei, BQ, ... We do not recommend doing this and explaining the reasons: We can leave the device unusable. Just because we don't have the latest version of Android on our mobile phone doesn't mean it's worse than the other if you have to. Importantly, it is safe, has no errors, is robust and its features and hardware are based on your operating system. There is no universal method for all devices and for each manufacturer, as we said earlier, there are several layers of customization that can vary even from one model and can affect the functions of buttons, defunction of certain tools, ... The new versions of Android have many features and features focused on the latest generation of mobile phones (fingerprint ...) that our mobile phone may not support. It's like pretending to install Windows 10 on a computer 20 years ago. We will lose the mobile phone warranty. This is usually not a problem because when you stop getting automatic updates probably the mobile warranty has already lost it because it will have been in the past for two years. As we have already mentioned, we do not recommend this third option, but the user can take risks because our terminal actually has hardware that supports android update backup, or because we just want to do the test. We go into the trivia process: Root mobile: we need to be rooted and be able to manage all our mobile functions. As a result there is an app that includes several models and manufacturers that you can download here kingroot but if your mobile model can not be rooted with this tool, we recommend this site XDA Developers, where if all models are cataloged the manufacturer appears. To find the exact model of your terminal settings & phone information and come the exact model number. The second step is to change the recovery (Flash Recovery) to access certain hidden system features. For this we recommend download rom manager We already have tools and before you start it is important to create a backup of Android ROM and factory applications and we will do this with Titanium BackupOnce all this is done: root, change and backup we went to install rom. To do this, we have found our mobile model and manufacturer ROM (usually called cooked ROM - is very good and current cooked firmwares) in the XDA Developers forums. When we have a ROM we can install it from recovery or from ROM Manager. The process, which is called flashing rom, is a simple and intuitive accent that we need to do a complete wipe and clean the Dalvik cache when requested. Once this has been done, we can recover all the apps that we have installed with Titanium Backup.List for Android devices that support Android Oreo.Note: this article will be updated, including Android 8.0 oreo version and it is a list of Android devices that have released OTA and support their official update: Google Pixel, Google Pixel XL, Pixel C, Nexus 6P, Nexus 5X and Nexus PlayerNokia 3,5,6 and 8OnePlus 3 3T, 5, 5TSamsung Galaxy S8, S8+, S8 Active, Note 8, Note Fe, Note 5, S7, S7 Edge, S7 Active, S6, S6 Edge, S6 Edge+, A7 2017, A5 2017, A3 2017, A9 PRO 2016, A8 2016, J7 2017, J7 2017 PRO, J7 2016, J5 2017, J5 2017 PRO, J7 MAX, J7 Prime, C9 PRO, C7 PRO, C5 PRO, C7 TAB, S3, TAB S2, TAB A 2017, TAB A 2016, TAB Active 2Sony Xperia XZ1, XZ1 Compact, X, X Performance, X Compact, XZ, XZ Premium, XZS, XA1, XA1 Ultra, XA1 Plus, TouchMotorola Moto Z, Z Droid, Z Play, Z Play Droid, Z2 Play, Z2 Force Edition, X4, G5, G5 Plus, G5 S, G5 S Plus, G4 Plus, Lenovo, K8, K8 Plus, K8 NoteLG G5, G6, G6, Q6, L20, V30HTC U11, U Ultra, 10BQ Aquaris V, V Plus, U2, U2 Lite, U, U Plus, U Lite, X, X Pro, X5 PlusAsus Zenfone 3, 4ZTE Axon 7, 7 Mini, Pro, 7S, Elite, Mini, Blade V8, V7, Nubia Z17, MAX XLEssential PH-1Xiaomi Mi1, 6, 5S, 5X, 5S Plus, 5C, MAX, MAX 2, Note 2, Note 3, Note 4, 4X, 5A, 5A Prime, Mix 2Huawei Mate 9, 9 Pro, 9 Proche Design, P10, P10 Plus, P9, P9 Plus, P9 Lite, P8 Lite 2017, Honor 8, Honor 8 Plus, 6X, 7Android Oreo does not change graphics design or Android interface, but adds security and power efficiency improvements and some specific points :P video screen: video screen in another app. Ideal for other activities when watching a video or making a video call. New emoticons with new designs. AutoComplete in Google apps can now be used in all apps. Smart Text Selection: When you select text, multiple options will appear as shortcuts as functions. Example: If we choose a phone number, we'll see the ability to make direct calls. Sources and external linksUpgrade android official website was last changed: October 1, 2020 ruben APPS SMARTPHONEPROGRAMS FOR PCGUIES AND MANUALSUpgrade the best app apps for your mobile phone, smartphone or cell phone and most For your COMPUTER, COMPUTER, or PC If you have a telegram that you receive all updates to our channel, we always recommend that you update to the latest version of both the programs that you installed on your mobile or tablet, or the programs installed on your computer or computer for several reasons: more security, adding new features, better design, and interface. You will be able to directly download the files needed to install from our servers (quickly and securely downloaded).
