With just a few basic steps, you can remove unwanted objects from your photos. For professional photo editors, they often hours to edit photos using sophisticated tools, but you can do it in a few quick steps. To remove an object, you can select Brush and Lasso tools. The brush will help you erase a large object. Drag your finger around the object, select Go. The app will remove the removal and do it as if it didn't exist. In addition, Lasso darkens the entire object and removes it. You can adjust the size of the brush smears to darken more accurately. If the parts are too small, use zoom/zoom. In my experience, this feature doesn't always work the way we expect it to. In many cases, you won't be able to remove objects that can distort photos. You need to practice many times to get the picture right. Removing the line Is a feature I didn't expect much when installing TouchRetouch. But after use, it's really impressive. Instead of using the Lasso and Brush tools that I've introduced, the app automatically recognizes straight lines such as lines, wires, and you can easily remove them. Your photos will be much more artistic and beautiful. However, if the image has many colors and complex objects, use the segment removal feature to identify each segment of the line. You can then remove each segment. A quick repairIn case you want to erase small details just brush, like acne, scars, use quick repairs. This app will remove stains on your photos easily and quickly.
