Those who scored poorly on this test may have difficulty in these areas:An architect, for example, needs to be able to rotate shapes and objects mentally to effectively include every aspect of the plan in which they are responsible. Engineers need to be able to visualize all the moving parts of their plan to make sure their plan is well developed. Why do employers use ss space ability tests? A hole then punches one or more places through folded paper. You must find the answer option that shows exactly what the paper will look like after it is opened. 2-D rotation figures: The question image is a drawn figure of several types. You'll find that number, after being rotated, is exactly the same as the figure in the question image. 3D rotating object: The question image is a 3D object. You must find the object, after being rotated, exactly the same as the object in the question image. Reflection: You are given a drawn figure in question.
