Fancy font generator bold

Hi! Have you ever wondered how people make text bold in their social media/bios posts when there aren't any formatting buttons? Well, this little web app allows you to convert normal text into bold text that you can copy and paste into your social media posts/bio/etc. The characters created are not actually a bold font, but rather a set of intense Unicode characters. This is why it is possible to copy and paste them (which you cannot do with normal fonts). Think of these bold characters as separate glyphs, just as A is different from a, and % is different from $. They are actually different characters/symbols - not just different styles or fonts. Are they interested in how all these text font conversion things work? Let's take a dip in the origins of Unicode - the international nonprofit that creates the rules for how computers should convert binary (zeros and ones) into text characters (like the ones you're reading now). Unicode In the early days of computing, there was no agreed way to represent and rendering text in computer programs. Typography was an established field, but it had not yet made its way beyond the press-writer and into the digital realm. As computer use increased, and as the early Internet emerged, this became a problem. See, if you're a developer, and you wanted your program to interface (connect to, or talk to) another program, then you need some kind of common language. At the lowest level, computers transmit voltages (low/high, zero/one). These have to be turned into something important in some way. So a developer could say 001 means A, 002 means B, and so on. And then you can transmit messages by sending zeros and one. Easy! Except every programmer had their own code. So there would be another programmer who his program interpreted 000 as A, and 001 as B, etc. And so it was as if everyone in a conversation spoke a different language. The solution to all this was to create translators between different formats, just as you would in a conversation between people of different languages. But as you can imagine, this is getting cumbersome. Why couldn't everyone speak the same language? That would make everything a lot easier. Well, in the early 1980s, a group of employees from a bunch of major tech companies came together to try to create the universal code to convert binary (zeros in text characters (such as the ones you are reading now). They called it Unicode. Okay, what does all this have to do with the bold text? Well, we get there... You see, unicode had quite a task on its hands. There were dozens of specs out there in the wild already (public and private), and each of them had many users, and many of the specifications were mainly for use in languages other than English. So how was Unicode Unicode to meet everyone's needs? They couldn't just put a list of binary codes >ASCII and call it one day. They had a lot of work to do, and didn't want it to take decades to get everyone using Unicode. The result? Mash all the specs together into a giant monstrosity that met everyone's needs. Okay, well this could be a bit of an exaggeration, but there's some truth to it. Unicode had to please everyone if they were going to get quick adoption, so the most practical route was to try to make as many of the great players happy as possible. The end result of this is a metaphorical explosion of spec, which now encodes over 100,000 different characters, including those of almost every language, all emojis, and, most importantly, some different modified Latin alphabets – which includes some bold! But why include bold characters in the spec? Why not let developers use HTML, CSS and separate font files to style text in their applications? Two reasons: (1) HTML and CSS didn't come around until the late 80s, and (2) It was a bunch of extra effort if you just wanted a simple way to format text into a simple messaging application/protocol (like email!). So, in other words, Unicode focused on being friendly to the people it needed approval from. So that's where we got it! I hope that a little trivia was interesting to you, and that it is now at least a little clearer why this is not so much a bold font generator as a bold unicode text generator. You can copy and paste bold characters because they are actually bold characters, not just normal-style characters. You can't copy and paste a bold font, but you can of course copy text characters (such as those produced by this generator) as you please. Now, for the details! Intense text There are some different bold alphabets within the Unicode template. Many of the Latin alphabet styles came from the needs of mathematicians, chemicals, and other academics who needed a way to express their equations in a digital form. Here are the non-oblique intense Unicode alphabets, along with their names Unicode: Mathematics without bold: abcdefghijklmnopqrstuvwxyzABCDEVGHJLMNOPQRSTUVXYZ01234567 89Math bold: abcdefghijklmnopqrstuvwxyzABCDEVGHJLMNOPQRSTUVXYZ0123456789Math bold Fraktur διπλἰς πίπησε abcdefghijklmnopqrstuvwxyzABCDEFGHIJKLMNOPRSTUVWXYZ01234567890α παρατηρήσετε ἰπ το αλφρίβητο Fraktur δεν περιλαμβἰνει αριθμούς. Δυστυχώς αυτό εἰναι μόνο και μόνο επειδὴ μαθηματικοἰ δεν χρησιμοποιοὐν αυτὀ το σενὰριο για αριθμητικὰ πρἀγματα, και αντ 'αυτοὐ απαιτεἰται μόνο ἐντονα γρἀμματα για τους σκοποὐς τους. Ἐντονη πλἀγια υπἀρχουν δύο ἐντονα πλἀγια αλφἀβητα σε Unicode, τα οποἰα μπορούν να δημιουργηθοὐν χρησιμοποιὠντας αυτὴν την τοποθεσἰα Web. Εδὶ εἰναι: Μαθηματικἰ ἰωρὐς ἰντονη πλἰγια γραφἰ abcdefghijklmnopqrstuvwxyzABCDEFGHIJKLMNOPQRSTRTUVWXYZMath ἰντονη πλἰγια: abcdefghijklmnopqrstuvwxyzABCDEFGHIJKLMNOPQRSTUVWXYZΘα παρατηρἰσετε ἰτι δεν υπἰρίουν αριθμητικἰ σίμβολα σε αυτἰ τα αἰνολα. Και πἀλι, αυτὀ συμβαἰνει επειδὴ αυτοἰ οι χαρακτἠρες χρησιμοποιἠθηκαν σε συμβολικἀ πλαἰσια (π.χ. για την αναπαρἀσταση αλγεβρικὠν μεταβλητὠν). βαρακτἰρες με ἰντονη γραφἰ Unicode Εδὶ εἰναι μια ωραἰα συμπταγἰς λἰστα ἰλων των ἰαρακτἰρων στο μπλοκ μαθηματικἰ αλφαριθμητικἰ σἰμβολα Unicode. Ἐχω συμπεριλἀβει τις μη τολμηρἐς εκδἰσεις των χαρακτἠρων πἀρα πολὐ, μόνο για αναφορἀ. Οι περιἰτεροι απἰ αυτοὐς τους ἰαρακτἰρες θα πρἰπει να εργἰονται στο twitter, στο bios instagram, και τα παρἰμοια: A B D E F G H I J L M N O Q R T U V W X Y Z a b c d e f g h i j l m n o p q r s t u in w x y z A B C D E F G H J L M N O P Q R T T U V W X Y Z a b c e f g i j k l n o p q r t u v w x y z A B C D E F H I L L M N O P Q R T U V W X Y Z a b d e f g h i j l m n o p q r t u v w x y z A C D G J K O P P S U W X Y Z and b c d f h i k l m n p p r t u v w x y z A B D E G H I L M N O P P T T U W X Y Z and b c d e f g h i j l n o p q r s t u v w x y z A B D E G J L M M N O Q S T U V W X Y and b c e f g i j k l m n o p q r s t u v w x y z A B D E F G I J K L M O S U W X Y and b c d e f g h i k l m n o p q r with t u v x y z A B D E G H K M N O P Q R T U U W X Y Z a b c d e f g h i j k l m n o p q r s t u v w x y z A B D E F G H I J L M N O Q R S U V W X Y Z a b c d e f g h i j l n o p q r s u v w x y z A B D E F F H I J K L M N O Q R T T U V W X Y Z a b c d e f g h i j l n o p q r s u v w x y z A B D E F H L M N O Q R S V W X Y Z and b c d e f g h i j l m n o p q r t u v w x y z A B D D G H I J K M O Q R S W W Y Z and b c d e f h i k l m n p q r t u v w x y z A B B D F G H I J L M N O P Q R U V W X Y Z and b c d e f g h i j l m n o p q r t u v w x y z i j A B Γ Δ Δ Δ Δ Δ Δ Ā Ĝ Ω Ͱ α β γ δ ε ζ η θ ι κ λ μ ν ĝ ο π ρ ς σ τ υ φ ψ ω δ ε θ κ φ ρ π Α Β Γ Δ Ε Β Η Θ Ι Κ Λ Μ Ν Ν Ĝ Ο Π Ρ Θ Σ Τ Υ Φ Χ Ψ Ω Ͱ α β γ δ ε ζ η θ ι κ λ μ ν ξ ο π ρ ς σ τ υ φ χ ψ ω δ ε θ κ φ ρ **Α Β Γ Δ Ε Ζ Η Θ Ι Κ Λ Μ Ν Ξ Ο Π Ρ Θ Σ Τ Υ Φ Χ Ψ Ω α β γ** e g e ∂ f ∂ f 1 2 3 4 5 6 7 8 9 0 1 2 3 4 5 6 7 8 9 0 1 2 3 4 5 6 7 8 9 0 1 2 3 5 6 7 8 9 tap to load all characters As you can see ,

Unicode has a bunch of different bold alphabets that can be used to construct your own bold words, sentences, paragraphs, ... Novels? Basically, you can use them almost anywhere you can use regular text. As you can see, there are even some bold Greek characters there. If you click the show more text fonts button at the top of the page (after creating some bold text), then you will see a bunch of different pseudoalphavets done using some of these strangest Unicode characters. On Reddit Reddit uses a special taste of Markdown to turn plain text user comments into comments that can be bold, italicized, and other formatting, such as one-space block codes. Here's how you can add bold text to your reddit comment: This text will be normal**and this text will be bold ** If you just put an asterisk on each side, then you can get italics. There is no built-in way to get bold italic text on reddit, but you can use this intense text generator to get just that! Some social media platforms ban certain characters, but most (including reddit) still allow you to use all sorts of fancy Unicode characters, such as the bold ones you can create here. In HTML/CSS If you're trying to edit how to make text bold in HTML, here's how: This text will be normal and this text will be boldYou can also use <strong> instead of . If you want to make the value of an entire paragraph of text bold, you can do so as follows: <p style=font-weight:bold;>All this text will be bold ... </p>You can also specify other font weight values for even greater boldness: font thickness:100; /* minute */ ... font-weight:400; /* normal */ ... font-weight:700; /* bold */ ... font thickness:900; / * very bold */ Interesting, if you try to apply CSS boldness to the bold text produced by this website, it has no effect. So it seems that CSS only affects some subset of Unicode characters. And I guess it makes sense because emojis are part of and it would be quite strange to have bold emojis ☺ Some social media sites blocked certain characters in some places. For example, Instagram doesn't allow special fancy unicode characters in posts, but <strong> <strong> Instagram bio. Other platforms may have their own limitations that you need to resolve. Some places may even allow you to include special characters in your user name, but at least your display name. If you're not sure if bold text will work on that social media platform, there's no harm in trying it. If the characters are banned, you will either receive an error message telling you that there are some invalid characters on the form you were trying to save, or simply remove the characters or convert them to regular characters. There's nothing wrong with trying! Anyway, we hope this bold text generator (text bolder?) was useful to you! Have fun making bold letters! ¶(◁) Please note that this website uses cookies to personalize content and ads, provide features on social media, and analyze web traffic.
